34,235. Sept. 24.—Amending order 34,119, authorizing Hydro-Electric Power Commission of Ontario to build permanent power development canal and construction railway under Canadian National Rys. in Lots 57, 59 and 60, Stamford Tp., Ont.

34,236. Sept. 27.—Dismissing complaint of L. Perrin & Co., Vancouver, B.C., against express rates on crabs in ice, from Vancouver, B.C., to Toronto, Hamilton and Fort William, Ont.

34,237. Oct. 1.—Authorizing Canadian National Rys. to make highway crossing at Biggar, Sask.

34,238. Sept. 29.—Authorizing Canadian National Rys. to close station at Blair, Ont.

34,239. Oct. 1.—Dismissing application of Town of Estevan, Sask., for reapportionment of rental costs of C.P.R. spur.

34,240. Sept. 29.—Approving Algoma Central & Hudson Bay Ry. deviation as built between mile 103.80 and 104.79, Algoma District, Ont.

Canadian Railway AND Marine World

Founded in 1896 by Acton Burrows.

Devoted to Steam and Electric Railway,
Marine, Shipbuilding, and Railway, Harbor and
Canal Contractors' Interests.

Official Organ of various Canadian Transportation
Associations.

Published on the first of each month at
70 Bond Street, Toronto, Canada.

ACTON BURROWS, Proprietor and Editor.

AUBREY ACTON BURROWS, Business Manager.

Assistant Editors, John Keir and Edwin Winfield.

United States Business Representative,
A. Fenton Walker, 143 Liberty St., New York

Member of
Associated Business Papers, Audit Bureau of Cir-
culations, Business Newspaper Association of
Canada, Canadian National Newspapers and
Periodicals Association, Canadian Press Associa-
tion.

Authorized by the Canadian Postmaster General
for transmission as second class matter.

SUBSCRIPTION PRICE, including postage,
Canada, United Kingdom, most other British Pos-
sessions (except Australia), and to Mexico, \$2 a
year. Extra postage to United States, 50c a year;
to other foreign countries, except Mexico, \$1.50
a year.

SINGLE COPIES, 25 cents each.

The best method of remitting is by express or
post office money order. If remittance is made
by cheque, 15 cents should be added to cover cost
of collection, unless cheque is payable at par in
Toronto or Montreal.

ADVERTISING RATES furnished on application.

ADVERTISING COPY must reach the publishers
by the 10th of the month preceding the date of
the issue in which it is to appear.

TORONTO, CANADA, NOVEMBER, 1923.

The Inland Water Freight Rates Act, 1923, Should be Repealed.

This is the third issue of Canadian Railway and Marine World in which the Inland Water Freight Rates Act, 1923, has been discussed editorially, and as our comments have been in critical vein, we preface further discussion by stating that our criticisms are not designed to be destructive, but are, on the contrary, decidedly constructive. Among the functions of a technical newspaper identified with and serving any industry or group of industries, as Canadian Railway and Marine World is identified with, and serves, Canadian land and water transportation industries, is that of freely offering opinions having for their object the improving of conditions under which those industries render their service to the public, and, in addition, of preventing undesirable conditions from prevailing. Our criticism of the act is based on the fact that we are strongly of the opinion that it has introduced a most undesirable condition, as concerns both the industry and the public, in the Great Lakes transportation industry.

If anything were needed, in addition to the proof afforded by the developments as recorded in our October issue, to demonstrate the undesirability and unworkability of the act, it is furnished by the development of Oct. 19 recorded in the Marine Department of this issue, wherein the Board of Grain Commissioners gave notice that the requirements of clause 3 of the act could be met through the shipper, instead of the ship owner, filing a statement of the rate agreed upon, and if actual proof were needed that the act is harmful in an economic sense to prairie farmers and the grain trade, it is furnished by a mere comparison of the level to which shippers have bid rates for lake carriage this year, as compared with preceding years.

That the act is unworkable and impracticable, as we have contended from the first, is practically admitted by the Government through its action in sanctioning the evasion of its most important requirement. Permission to ship owners to evade the act by filing statements of charter agreements already entered into, instead of filing tariffs in advance of the making of contracts, as the act requires, constituted the first admission of the act's impracticability, and permission to ship owners to evade the act by not being required to file either tariffs, or statements of carriage contracts made, confirmed that admission. The Government's action in sanctioning, or more likely originating, the evasion procedure, is, in a measure, in line with the recommendations made in our last editorial discussion of the matter, but we are of opinion that the Government would have done better by frankly stating that it had concluded that the act is impracticable, unworkable and undesirable, and that violations of its terms would be winked at, rather than by adopting the course of allowing the law to be evaded by the provision of "generous and liberal interpretations."

As pointed out in the Marine Department of this issue, the act has not been able, by reason of the crop's lateness, the grain's dirty condition, the lightness of export demand, and a certain tendency to hold grain for better prices, to create the mischief it otherwise would have done. It is probable that more or less continuance of the effects of these conditions will, in combination with the supply of a more adequate number of ships than would have been forthcoming if the act's evasion had not been sanctioned,

restrain the sky-high bidding for cargo space which the act was beginning to bring about, and thus prevent this ill advised legislation from exacting a heavy toll from the prairie farmers. But surely the experiences of the last two months should have convinced the Government that free and open competition is a better regulator of rates charged the public by a purely competitive industry than all the interfering legislation which could be crammed into a law library. And surely the Government, in recognition of this fact, will make no delay at the next parliamentary session in undoing its folly by repealing the act.

As before stated, we are of opinion that the business of Great Lakes transportation should have as its basis, as it had for a century or so prior to the Inland Water Freight Rates Act's passage, free and open competition, the unrestricted action of the law of supply and demand, and full opportunity for individual ambition, initiative and industry to reap its just reward. We support government regulation of railways, and realize that it is necessary and desirable, because a railway is often a complete monopoly, and naturally a quasi-monopolistic institution, but we condemn government regulation applied to Great Lakes transportation, for the reason that a ship owning business is not a monopolistic institution, and is about as far from being such as can be imagined. A Great Lakes ship owning business is no more a monopoly than a grocery store, or a business deriving its income from the operation of drays and trucks in a large city, and the Government might as reasonably undertake to regulate the grocery store industry, or the cartage industry, as the Great Lakes transportation industry. The ship owners' action in getting together last year to discuss their problems, their best means of serving the public, and the reasonableness of charges for their services, was no more an offense against the public welfare than are the periodical meetings of manufacturers', wholesalers' and retailers' associations throughout the country. We believe that the best regulator in any industry, in which many people compete on an even basis, is competition in service, wherein the individual who puts forth the best and most sincere effort, and furnishes the best service, gets the best reward. We believe, further, that the whole industrial and commercial structure of this country is based on competition in service, and that the character of the people has been formed largely by that competition, through the absence of undue governmental paternalism, and through people being taught to think for themselves, instead of looking to a government to do their thinking for them. The Government's attempt to interfere in the Great Lakes transportation industry by the passage of the Inland Water Freight Rates Act, was certainly a long step in the wrong direction economically, and just as certainly it was not a step in the right direction socially.

Southern New England Ry.

The Toronto Globe says that "the Boston Transcript gives details of the construction of 85 miles of new railway by the Canadian National Rys., to secure entrance to the port of Providence, R.I.," to which the Globe adds: "This is not a branch line banned by the Senate." It might interest the Globe to know that

Canadian Railway and Marine World is officially advised that no such construction is going on, and we do not see how it could without an appropriation being voted by the House of Commons, which would, of course, require the Senate's assent.

Figures Respecting Express Companies' Earnings.

Figures issued by the Dominion Bureau of Statistics, Transportation Branch, respecting the express business in Canada in 1922, show that the Canadian National Express Co., now the Canadian National Rys.' Express Department, gross receipts from operations were \$12,618,670.65; that it paid \$5,974,981.64 for express privileges, leaving operating revenues of \$6,643,689, and that operating expenses were \$6,173,148, leaving net operating revenue of \$470,540.04. The same report shows that the Dominion Express Co.'s gross receipts in 1922 from operations were \$13,575,532.63; that it paid \$6,855,532 for express privileges, leaving operating revenues of \$6,719,999.68; that operating expenses were \$6,758,189.68, leaving a deficit of \$38,190, and that revenue from outside operations, \$36,156.11, reduced this to a net operating deficit of \$2,033.89.

But, according to the statement presented to the Board of Railway Commissioners at the recent hearing on the express rate increase application, it appears that the Canadian National Express Co.'s gross receipts from operations in 1922 were \$13,085,941; that its expenses outside of express privileges, or payments to the railway, were \$6,513,655, and that if the railway had been paid for furnishing express service at cost, 43.93c a car mile, the cost of express privileges would have been \$10,022,995, which would have made the total cost of furnishing the service \$16,536,650, which, in turn, would have left a deficit on the year's operations of \$3,450,709.

At the time the Bureau of Statistics issued the figures referred to, many newspapers commented on them, pointing out that the Canadian National Express Co. was making good net earnings, while the Dominion Express Co. was incurring deficits. The statements furnished the Board of Railway Commissioners show that both companies have been incurring deficits. It would seem that the figures submitted to the Bureau covering the Canadian National Express Co. earnings were based on an insufficient payment to the railways for the service afforded the express company, or as it now is, department. It is regrettable that the figures published should have represented one company as doing so much better than the other, when such was not the case, and it hardly seems necessary to state that figures should not be made public unless they are compiled on an accurate basis and really do portray the situation, because if they are based merely on some feature of an organization's internal accounting, they are certainly very misleading.

Halifax Grain Elevator.—The Trade and Commerce Department will receive tenders to Nov. 7 for building a grain elevator and conveyor galleries at Halifax, N.S., for the Railways and Canals Department. It is stated that the elevator, which will have a capacity of 1,000,000 bush., will be located on the Dartmouth pier, and that the conveyor system will be located so as to serve the adjacent piers.

Transportations Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Board of Railway Commissioners.—The appointment of Hon. FRANK OLIVER, of Edmonton, Alta., as a member of the Board, which was foreshadowed in previous issues of Canadian Railway and Marine World, was officially announced in the Canada Gazette of Oct. 6, the appointment being dated Sept. 21.

Canadian National Rys.—W. J. BLACK, formerly Deputy Minister, Dominion Colonization and Immigration Department, Ottawa, has been appointed Manager, Colonization and Development Department, C.N.R. Office, 17 Cockspur St., London, Eng.

J. O. CAMERON, heretofore Yardmaster (night), has been appointed Yardmaster, Danforth, Toronto, vice J. Cloughesy, whose appointment as Assistant Superintendent of Terminals, Montreal District, Central Region, Montreal, was announced in our last issue.

S. J. FAUGHT, heretofore Coal Supervisor, Key Harbor, Ont., has been appointed Assistant Superintendent, Nipigon Division, Northern Ontario District, Central Region, succeeding J. W. Nicholson, deceased. Office, Hornepayne, Ont.

C. D. GLASS, heretofore Assistant Superintendent, Port Arthur Division (portion of), Manitoba District, Western Region, at Rainy River, has been appointed Assistant Superintendent, Minaki and Quibell Subdivisions, Port Arthur Division, vice S. McElroy, transferred to Port Arthur, Ont. Office, Sioux Lookout, Ont.

R. P. GOUGH, Toronto, who is Vice President of the Home Bank of Canada, which suspended payment recently, has resigned from the C.N.R. directorate. The following official statement was issued in Ottawa, Oct. 13, by the acting Prime Minister, Mr. Fielding:—"Richard P. Gough, who is one of the directors of the Home Bank, has resigned his position as member of the board of directors of the Canadian National Rys. Mr. Gough, in communicating with the acting Prime Minister, said that he had consulted professional advice and that he was afraid that perhaps a resignation might imply an acknowledgment of wrongdoing, which he did not wish to make, and for that reason he had hesitated in sending in his resignation. He was quite satisfied that investigation of the affairs of the bank would vindicate him. Nevertheless he had concluded that rather than allow any embarrassment to the Government or the Canadian National Rys. board, he should send in his resignation, and he has done so. The resignation has been accepted."

An Ottawa press dispatch of Oct. 18 said that a successor to Mr. Gough will probably not be appointed until the Prime Minister and the Minister of Railways return from England, the position being looked on as an Ontario one.

J. M. GRIEVE, formerly General Superintendent, Sleeping, Dining, Parlor Cars and Railway Restaurants, who has been granted three months sick leave, in August, has been appointed Superintendent, Sleeping, Dining, Parlor Cars and Railway Restaurants, Central Region. Office, Toronto.

W. LUCAS has been appointed acting Roadmaster, Brule Subdivision, Edson Division, Alberta District, Western Region, vice W. H. Fleming. Office, Edson, Alta.

C. H. LUNDGREN was mentioned in

Canadian Railway and Marine World for October as having been appointed Night General Yardmaster, Lakehead Division, Manitoba District, Western Region, with office at Fort William, Ont., but we have since been advised that his office is at Port Arthur.

J. H. McDIARMID, heretofore Yardmaster at Transcona, Man., has been appointed Assistant Superintendent, Fort Frances and Sprague Subdivisions, Port Arthur Division, Manitoba District, Western Region, vice C. D. Glass, transferred to Sioux Lookout.

S. McELROY, heretofore Assistant Superintendent, Port Arthur Division (portion of), Manitoba District, Western Region, at Sioux Lookout, Ont., has been appointed Assistant Superintendent, Graham, Kashabowie and North Lake Subdivisions, Port Arthur Division, vice C. D. Glass, transferred to Sioux Lookout. Office, Port Arthur, Ont.

D. A. McINNIS, heretofore Roadmaster, Wabamun Subdivision, Edson Division, Alberta District, Western Region, Edson, Alta., has been appointed Roadmaster, Lovett, Luscar and Mountain Park Subdivisions, Edson Division, Alberta District, Western Region, vice J. A. Leslie. Office, Coalspur, Alta.

W. J. McNABB was mentioned in Canadian Railway and Marine World for October, as having been appointed General Yardmaster, Lakehead Division, Manitoba District, Western Region, with office at Fort William, Ont. We have since been advised that his office is at Port Arthur.

YOILLAND MOODY, heretofore acting Superintendent, Sleeping, Dining, Parlor Cars and Railway Restaurants, Central Region, has been appointed Assistant Superintendent, Sleeping, Dining, Parlor Cars and Railway Restaurants, Central Region. Office, Toronto.

J. F. PENFOLD has been appointed Yardmaster at Transcona, Man., vice J. H. McDiarmid, appointed Assistant Superintendent at Rainy River, Ont.

R. C. RENNIE, who has been acting Superintendent, Sleeping, Dining, Parlor Cars and Railway Restaurants, Central Region, while Y. Moody has been acting Superintendent, has been re-appointed to his former position as Chief Clerk, Sleeping, Dining, Parlor Cars and Railway Restaurants, Central Region. Office, Toronto.

E. W. SMITH, heretofore acting General Superintendent, Sleeping, Dining, Parlor Cars and Railway Restaurants, has been appointed General Superintendent, Sleeping, Dining, Parlor Cars and Railway Restaurants. Office, Montreal.

W. WALLACE, heretofore assistant night yardmaster, Mimico, Ont., has been appointed Yardmaster (night), Danforth, Toronto, vice J. O. Cameron, appointed Yardmaster there.

F. E. WHELPLEY, heretofore acting Treasurer, Atlantic Region, has been appointed Treasurer, Atlantic Region. Office, Moncton, N.B.

Canadian Pacific Ry.—J. D. CALLAHAN, heretofore Yardmaster (day) at Medicine Hat, Alta., has been given extended leave of absence on account of illness, and has been succeeded by P. N. Stewart, heretofore Yardmaster (night).

A. P. VILLAIN, City Ticket Agent, San Francisco, Cal., has resigned, and has been appointed District Passenger Agent there for United States Lines, Managing Operator for United States Shipping Board, his territory consisting of California and Nevada.

Self Propelled Cars on Steam Railways.

Canadian National Railways.—The accompanying illustration shows the storage battery car converted from a gas-electric car at the Niagara, St. Catharines & Toronto shops at St. Catharines, Ont., as described in Canadian Railway and Marine World for October. The car, as rebuilt, is 57½ ft. long and seats 96 passengers. It has a smoking compartment, but no lavatory. It is equipped

National Rys. management is considering the possibility of placing a storage battery car in service between Toronto union station and Weston, 8.41 miles northwest of Toronto, to operate on the original G.T.R. line from Weston to Parkdale and Toronto union station, making morning and evening trips.

The Peterborough, Ont., City Council asked Sir Henry Thornton, President,

have seating accommodation for 25, and also baggage and express space. It will be capable of hauling cars of freight, and will also be suitable for use in switching service. It is intended to run it during this winter between Williams Lake and Quesnel. Williams Lake is 277.8 miles from Squamish dock, and the distance from Williams Lake to Quesnel is 70.7 miles. We are advised that the car will be suitable for service on the North Shore Branch, should traffic conditions warrant it, and it is believed that this type of car will enable the railway to give a service where the traffic is light without subjecting the public to a reduced train service.

Foreign.—A remarkable increase has taken place lately in the use of Diesel-electric self-propelled cars in Sweden. Since 1913, several Swedish railways have been operating cars of this type, with engines rated at from 75 to 120 h.p., but several cars have been introduced recently which are equipped with engines of 160 and 250 h.p. Some of these high-powered cars are more in the nature of locomotives, being fitted with only a baggage space, the passengers being carried in trailers. The complete power installation for these cars, which have Diesel engines with electrical transmission to the driving wheels, is as follows, the apparatus being of similar nature for all sizes: one Diesel engine of the 4-stroke cycle type, with 6, 8 or 12 cylinders, according to capacity. The size of generators and other electrical equipment is also increased to accord with increased engine capacity. They have one direct-coupled direct-current generator of the 8-pole type, with commutating poles. The generator is shunt wound, but has a separate series winding, the latter being connected to the circuit only when the generator is driven from the storage battery in starting. The generator voltage

Storage Battery Car Frame, Canadian National Railways.

with 250 Edison A-12-H storage batteries, and 4 G.E. type G-261 ball bearing motors of 25 h.p. each. On completion of the conversion, the car was returned to Winnipeg in a freight train, with gears disconnected, and placed in service between Winnipeg and Transcona, where it was operated formerly as a gas-electric car.

As stated in our October issue, the Canadian National Rys. are having another battery car built at the N., St. C. & T. R. shops at St. Catharines. An illustration of its frame is given herewith. C.N.R. mechanical officials are developing plans for a standard frame for all future battery cars to be acquired, and it is expected that the frame to be adopted as standard will be somewhat similar to that shown herewith. It has side sills of 6 in. channels, center sills of 6 in. I-beams, platform sills of 5 in. I-beams, alternated with open truss supports as shown. The car for which this frame was built will be 58 ft. long and 9 ft. wide, and will be equipped with 260 A-12-H Edison batteries and 4 G.E. G-261 motors of 25 h.p. each. It will have a baggage compartment at the front, a smoking compartment to seat 20 passengers in the central portion, and a main compartment seating 40 passengers. Good progress is being made with construction.

In addition to the cars mentioned above, the Canadian National Rys. have invited tenders, in alternative form, for 6 more storage battery cars. In view of the success which the C.N.R. have had with storage battery cars during the two years they have been operated, which is emphasized by the management's intention to augment considerably the number now on the lines, it is evident that this type of car has definitely established a place for itself in self-propelled car service on steam railways. The absence of complicated mechanical features, making for minimum maintenance cost, is a most desirable feature, and in districts where electrical power is cheap, operating costs are low.

We are advised that the Canadian

C.N.R., recently, to put on gasoline or electric self-propelled cars in that district. He replied that they would not give better service than is being supplied by steam trains, and that their operation would not be economical, as it would be necessary to run steam trains to serve places in the territory not contemplated in the self-propelled cars' operation.

We are officially advised that the Canadian National Rys. management is considering placing an electrically operated self-propelled car in service between

Storage Battery Car, Canadian National Railways.

Quebec and Loretteville, Que., 8.6 miles, on the Batiscan Subdivision, Saguenay Division, Quebec District, Central Region.

The Pacific Great Eastern Ry. is adding a gasoline motor car to its rolling stock. The engine and trucks will be supplied by the Four-Wheel Drive Auto Co., Kitchener, Ont., and the body and furnishings will be made at Vancouver. The car will be equipped with standard railway appliances to comply with the British Columbia Railway Act. It will

can be varied, within wide limits, up to 550 volts. They have two electric motors of star series-wound railway type, with commutating poles. Power is transmitted to the axles by spur gearing. A storage battery of alkaline Jungner type, suspended beneath the car, furnishes current for starting, lighting and auxiliary apparatus. It is charged automatically while the car is in motion, and a special switch is provided for charging when the car is standing.

Canadian Railway and Marine World has expressed itself as hoping to see a Diesel-engined self-propelled car tried in Canada. The economy and efficiency of Diesel engines are well known, and a combination of Diesel engine and electrical transmission would appear to hold out prospect of great possibilities in self-propelled car service.

The Right Hon. Lloyd George on Canadian Railways.

The Canadian National and Canadian Pacific Railways managements, having been authorized by the Board of Railway Commissioners to issue free transportation to the Right Hon. David Lloyd George, M.P., members of his family, dependent members of his household, and members of his staff, between such places in Canada as were included in his itinerary, did everything possible to make his Canadian trip a pleasant one. The Canadian National had its business car Ottawa equipped with a radio receiving set, and sent it to New York. Mr. Lloyd George, his wife, daughter and party, together with a number of newspaper correspondents, etc., left New York on Oct. 6, by special train, consisting of business car Ottawa; President Sir Henry Thornton's business car; business car Canada; compartment observation, library, buffet and sleeping car Fort Ellice; standard sleeping car London; and a combination car for the crew. Sir Henry and Lady Thornton, J. E. Dalrymple, Vice President, Traffic Department, and G. T. Bell, Assistant to Vice President, Traffic Department, C.N.R., were also on the train, which, on its arrival in Montreal on Oct. 7, was met by a very large number of people, among whom Lord Shaughnessy and Senator L. C. Webster were prominent.

Shortly after noon, accompanied by his wife and daughter, Mr. Lloyd George visited the C.P.R. Angus shops, conducted by F. L. Wanklyn, General Executive Assistant, C.P.R., and accompanied by C. H. Temple, Chief of Motive Power and Rolling Stock, and J. Burns, Works Manager. Owing to the short time at his disposal, it was only possible to make an inspection of the locomotive erecting shop, where an exhibition of first aid work was also seen. The party then proceeded to the midway, where over half of the 8,400 shop employees had congregated, and gave the war premier a most enthusiastic reception, which he acknowledged in a brief speech, highly complimenting the efficiency of those who had demonstrated their skill at first aid work.

Ottawa, Toronto and Niagara Falls were visited subsequently, by Canadian National special train, and on returning to Toronto, late on Oct. 12, the car Ottawa was transferred to the Canadian Pacific, which attached it to a special train, which ran as the second section of train no. 3, leaving Toronto at 10.20 p.m. on the block of the first section. The rest of the consist of the train was compartment cars Glen Otter and Glen Sutton; standard sleeping car Newcastle; dining car Wardour; and a baggage car. J. J. Scully, General Manager, Eastern Lines, accompanied the train from Toronto to Fort William, D. C. Coleman, Vice President, Western Lines, meeting it there and going on it to Winnipeg. From Winnipeg, Mr. Lloyd George proceeded to Minneapolis, Minn., and other U.S. points.

Canadian Pacific Railway Constructions, Betterments, Etc.

Interprovincial & James Bay Ry.—The Board of Railway Commissioners has approved location plans for stations at Laniel and Agliers, Que., on the extension from near Kipawa, to the Quinze River, with branch to Ville Marie.

A recent Cobalt, Ont., press report stated that so important were the discoveries being made in the Rouyn gold-bearing area of Quebec, that the C.P.R. would lose no time in extending its Kipawa-Quinze River line to the district. The Quebec Minister of Colonization, Mines and Fisheries is reported to have given orders for the preparation of good winter roads into the area, and it is stated that legislation will be introduced at the Legislature's next session, to grant a subsidy to the C.P.R. to build an extension of about 36 miles from the Quinze River to the centre of the Rouyn area. (Sept., pg. 435.)

Tuffnell-Prince Albert Line.—A press report states that rapid progress is being made in grading on the line under construction from Tuffnell towards Prince Albert, Sask. A contract for grading 50 miles from Tuffnell was let in May to Grant Smith & Co. and McDonnell, Ltd., and a contract for an additional 45 miles was let to the same company in June, making 95 miles in all, which will carry the line to Tisdale, on the Canadian National Rys. line from Thunderhill Jet. to Prince Albert. Rails were reported to be in course of delivery on Sept. 25, and tracklaying was expected to have been started during October, in the expectation of getting a substantial mileage laid by the end of the year. The Board of Railway Commissioners has authorized the building of this line across the Canadian National Rys. Humboldt section in Sec. 21-34-13 west of 2nd Meridian, Sask.

Lanigan to Melfort.—A press report of Oct. 9 stated that track had been laid on the extension of the branch from Lanigan, which is in operation to Naicam, to Pleasantdale, 10 miles, and that work was being pushed in the hope of getting the additional 22 miles of track, which will carry the line to Melfort, Sask., laid by the end of the year. (Oct., pg. 482.)

Peace River Proposals.—In connection with the extensive investigations being made by C.P.R. engineers in the Peace River area, E. W. Beatty, K.C., President, referring to proposed construction of lines there, said at Winnipeg recently:—"It is a possibility, but I would not say an immediate possibility. Extensive surveys are under way with the building of this new road in view. It would be a very expensive proposal, but the future of the Peace River country may warrant it. That is the question that we are now seriously going into. The opening of this new road would indeed mean great development in the new northwest. It is not, however, yet a concrete proposition." (Oct., pg. 472.)

Vancouver B.-C. Pier Construction.—At a dinner given by the Vancouver Board of Trade to the visiting directors of the C.P.R. recently, E. W. Beatty, President, stated that work on the new B.-C. pier would be proceeded with immediately. This pier forms part of the waterfront development decided upon several years ago. The original plans provided for 4 piers, referred to respectively as A., B., C. and D., of which A. and D. have been built and used for some years past. The plans were reviewed in 1919-20, when it was decided to abandon the project to build the two piers, B. and

C., in the original project, and to consolidate them into one. A contract was let to the Pacific Dredging Co., for dredging and filling in the site, and this work was completed in 1921-22. Plans for the pier were prepared, and in Nov. 1912, a contract was let to the Sydney E. Jenkins Co., Ltd., Winnipeg and Vancouver, for its construction. Following the letting of the contract, some reconsideration was given to the plans, the material of which the pier was to be constructed, and methods of erection, etc., and in February we were officially advised that the pier would be about 850 ft. long, about 331 ft. wide, and would have erected on it 2 double-deck sheds, connected at their outer ends to form a U; that each shed would be about 750 ft. long, and 100 ft. wide, with 4 railway tracks between the two sheds and 2 tracks between each shed and the side of the pier. Canadian Railway and Marine World for May contained, on pg. 224, an illustration showing the three piers, A., B.-C. and D., as they will appear when the B.-C. one is completed. (Sept., pg. 435.)

Victoria Terminal Building.—We are officially advised that the terminal building to be erected at Victoria, B.C., will be at the corner of Belleville and Menzies streets. It will be 122 x 52 ft., and practically 4 stories high, and will provide office accommodation for the company's B.C. Coast Steamship Service officials, including Manager, Superintending Engineer, Purchasing Agent, Accountant, and the staff generally. The contract has been let to Luney Bros., Victoria. (Oct., pg. 482.)

Transportation Events of Twenty-five Years Ago.

From Railway and Shipping World, now Canadian Railway and Marine World, for Nov. 1898:

J. M. Egan, at one time General Superintendent, C.P.R., Winnipeg, re-elected Vice President, Central Ry. of Georgia.

C.P.R. built combined station and hotel at Moose Jaw, Assa.

Revelstoke, B.C., made C.P.R. division point.

Track laying completed on C.P.R. extension from Stonewall, Man., to Foxton.

Plans for G.T.R. head office building in Montreal approved by city council.

Intercolonial Ry. gave contract to build 600 ft. pier at Halifax, N.S., to Rhodes, Curry & Co., Amherst, N.S.

Intercolonial Ry. appointments: J. E. Price, General Superintendent, Moncton, N.B.; G. M. Jarvis, Superintendent, Truro, N.S.

Hamilton Radial Electric Ry. gave contract for extension from Burlington to Port Nelson, Ont.

St. Thomas, Ont., St. Ry. converted from horse operation to electric.

Dominion Government gave Allan Steamship Line contract for winter mail service between St. John, N.B., and Liverpool, England.

C.P.R. steamboat Moyie launched at Nelson, B.C., to run on Kootenay Lake.

Dominion Government telegraph line from Quebec east, along the north shore, extended to Big Romain River, 656 miles below Murray Bay.

Grand Trunk Ry. appointments: H. E. Whittenberger, Trainmaster, London, Ont.; W. E. Costello, Trainmaster, Stratford, Ont.; C. S. Cunningham, Trainmaster, Island Pond, Vt.; J. McGrath, Master Mechanic, Stratford, Ont.

Mainly About Railway People Throughout Canada.

E. W. Beatty, K.C., President C.P.R., and Chairman, Financial Federation of Social Agencies, Montreal, was the principal speaker at the opening meeting of the 1923 campaign rally, Oct. 26.

Major Graham A. Bell, C.M.G., Deputy Minister of Railways and Canals, who is also one of the Canadian National Rys. directors, returned to Ottawa early in October, after accompanying the Minister to the League of Nations meeting at Geneva, and also to London, Eng. An Ottawa press dispatch of Oct. 16 said that after attending a C.N.R. directors' meeting in Montreal, he would return to England in connection with the G.T.R. and Grand Trunk Pacific Ry. shareholders' and debenture holders' claims. Another press report says that he may resign the Deputy Ministership and be again appointed Vice President of Finance, C.N.R., which position he held from Oct. 1922, until May 1923, as well as being Deputy Minister, and it is, of course, presumed that should he be re-appointed Vice President, he will resign the Deputy Ministership.

William John Black, who has been appointed Manager, Colonization and Development Department, Canadian National Rys., London, Eng., was born in Dufferin County, Ont., and educated at Collingwood Collegiate Institute, and Toronto University, graduating with the degree of B.S.A. in 1902. He was appointed Deputy Minister of Agriculture for Manitoba in Jan. 1905, and in April 1905 was appointed the first principal of Manitoba Agricultural College. He is a writer on agricultural subjects, and was, for some time, on the Manitoba and Northwest Farmers Advocate and Home Magazine's editorial staff, and was a commissioner on the Manitoba technical school system in 1910, and later was, until Oct. 10, Deputy Minister of Colonization and Immigration at Ottawa.

H. H. Brewer, Assistant General Manager, Western Region, lines east of Jasper, Alta., Canadian National Rys., Winnipeg, is on leave of absence, during which J. R. Cameron, Assistant General Manager, lines west of Jasper, has been transferred from Vancouver to Winnipeg, and is discharging his duties.

Sir George McLaren Brown, K.B.E., General European Manager, C.P.R., met the Canadian Prime Minister, Mr. King, on the latter's recent arrival by the C.P.R. s.s. Montcalm at Liverpool.

L. S. Brown, General Manager, Atlantic Region, Canadian National Rys., Moncton, N.B., has been elected President, I.R.C. Employees' Relief and Insurance Association, succeeding S. L. Shannon, formerly Comptroller and Treasurer, Canadian Government Rys., who was placed on the provident fund some time ago. **F. W. Robertson,** General Passenger Agent, Atlantic Region, was re-elected Vice President.

M. J. Butler, C.M.G., some time Deputy Minister of Railways and Canals at Ottawa, will address the Engineering Institute of Canada's Toronto branch, on Nov. 8, on "A Proper Freight Rate for Coal," in which he will attempt to show a method of calculating a fair rate for the transportation of coal in trainload lots from Alberta to Ontario, and make suggestions for equipment suitable to handle such traffic.

Kenneth M. Cameron, heretofore Assistant Chief Engineer, Public Works Department, Ottawa, and at one time

engaged in C.P.R. Engineering Department, Montreal, has been appointed Chief Engineer of the Department, succeeding the late A. St. Laurent.

S. B. Clement, Chief Engineer, Timiskaming & Northern Ontario Ry., will address the Engineering Institute of Canada's Toronto branch on Nov. 29, on "Recent Developments on the T. & N.O. R."

D. C. Coleman, Vice President, C.P.R. Western Lines, entertained the Earl of Birkenhead at a supper party at the Royal Alexandra Hotel, Winnipeg, Oct. 10, after his address in the Board of Trade auditorium.

George B. Corbett, of the C.P.R.'s audit office at Vancouver, B.C., formerly of Montreal, died suddenly recently while on a motorboat trip among the islands in the Gulf of Georgia and the Strait of Juan de Fuca.

Mrs. J. E. Dalrymple, wife of the Vice

H. J. Russell,
Who has been appointed General Manager,
Newfoundland Government Railway.

President, Traffic Department, Canadian National Rys., visited Pittsburg, Pa., during October as the guest of her son, E. R. Dalrymple.

R. Dudley, who died in Fernie, B.C., Sept. 25, aged 64, was formerly in the C.P.R. service. A press report states that he went west with D. C. Coleman, now Vice President, Western Lines, C.P.R., in 1898, being engaged on the C.P.R. at MacLeod, Alta. Our records show that Mr. Coleman entered C.P.R. service in Nov. 1899, as a stenographer in the division engineer's office at Fort William, Ont.

Mrs. A. E. Fish, mother of R. H. Fish, General Superintendent, Southwestern Ontario District, Central Region, Canadian National Rys., Toronto, who died Oct. 7, was buried at her birthplace, Postville, near Oakville, Ont., Oct. 8, the funeral being attended by a large number of C.N.R. officials from Toronto and other points on the district.

Hon. G. P. Graham, Minister of Railways and Canals, will, a London press dispatch says, sail from England on Nov. 9, by the s.s. Regina, for Canada.

George Ham, of the C.P.R. head office staff, Montreal, who is the only male honorary member of the Canadian Women's Press Club, was presented with a silver loving cup, at a Women's Press Club dinner, at Victoria, B.C., recently.

Mrs. Jos. J. Hebert, who died in Montreal recently, aged 87, was the mother of E. J. Hebert, First Assistant General Passenger Agent, C.P.R., there.

Fred Hill, agent, Canadian National Rys., Weston, Ont., who has retired on pension, entered G.T.R. service in 1872, when 20 years of age, being first employed at Carlton station, now in Toronto.

D. B. Hanna, ex-President, and A. J. Mitchell, ex-Vice President, Canadian National Rys., left Toronto, Oct. 17, for the Pacific coast, expecting to be away about three weeks.

E. E. Lloyd, Assistant Comptroller, C.P.R., with Mrs. and Miss Frances Lloyd, left Montreal, Oct. 7, for the Pacific coast, expecting to be back about the middle of November.

Wm. John McNabb, who has been appointed General Yardmaster, Lakehead Division, Manitoba District, Canadian National Rys., at Port Arthur, Ont., was born at Owen Sound, Ont., in March, 1876, and entered railway service Jan. 6, 1912, since when he has been, to Sept. 1912, switch foreman; Sept. 1912 to Oct. 10, 1913, Yardmaster (night); Oct. 10, 1913, to Sept. 16, 1923, General Yardmaster, all in C.N.R. service and at Port Arthur.

Sir Augustus Nanton, a director of the C.P.R., and President, Winnipeg Electric Ry., and Lady Nanton, entertained Lord Renfrew, Oct. 3, at dinner and a dance at Winnipeg while he was returning from his Alberta ranch en route to England. Lady Nanton gave a dinner at the Winnipeg Motor Country Club on Oct. 4 for the Ladies Elizabeth and Mary Byng.

Miss A. T. Pearce, second daughter of Wm. Pearce, Natural Resources Department, C.P.R., Calgary, Alta., was married there recently, to G. C. Tassie, D.L.S., British Columbia Public Works Department, Golden.

F. W. Peters, General Superintendent, British Columbia District, C.P.R., returned to Vancouver, Oct. 13, from an extended trip in northern British Columbia.

Mrs. F. W. Peters, wife of the General Superintendent, British Columbia District, C.P.R., gave a luncheon at Vancouver, Oct. 4, for Lady Foster, who, with her husband, Sir George Foster, have been on a trip to the Pacific coast.

R. D. Preston, who, a press report states, was for a number of years a travelling auditor for the C.P.R., died at his home at Winchester, Ont., Oct. 6.

Hayter Reed, formerly Manager in Chief of Hotels, C.P.R., and Mrs. Reed, returned to Montreal early in October, from their summer home at St. Andrews-by-the-Sea, N.B.

Grant Smith, of the railway contracting firm of Grant Smith & Co. and McDonnell, Ltd., which is building the 70-mile extension of the Timiskaming & Northern Ontario Ry. from Cochrane, Ont., and also has grading contracts for the C.P.R., died suddenly in St. Paul, Minn., Sept. 27, aged 55.

Sir Henry Babbington Smith, President of the Railway Amalgamation Tribunal in Great Britain, which has just completed its work in connection with the consolidation of the English and Scottish railways into four systems, died at Saffron Waldon, Essex, Sept. 29, aged 60. He was Chairman of the Pacific Cable Board for some years.

Jos. Henry Sorley, who died at Toronto Oct. 14, was born at Hamilton, Ont., May 17, 1859, and was for some time in G.T.R. service at Montreal. He entered C.P.R. service Oct. 1, 1882, as clerk in local freight office at Hochelaga, and remained in various capacities in the Freight Department at Montreal until Feb. 1, 1892, when he was appointed City Freight Agent at Ottawa, from which he retired on pension on Jan. 1, 1912, when he removed to Toronto.

John Spence, of the Passenger Department, C.P.R., Yokohama, Japan, who escaped from the earthquake disaster, as mentioned in Canadian Railway and Marine World for October, has written his mother in Toronto, giving particulars of some of his experiences during and following the earthquake. Stranded on the pier from which the s.s. Empress of Australia had just put off, he was compelled to swim ashore for his life. Making for the C.P.R. office, he saw that the Oriental Hotel and buildings adjacent were wrecked and being consumed in flames. When he reached the C.P.R. office it was on fire, and he found that one of the staff, John Reid, had been instantly killed. After a frantic, futile search for the safe in the intense heat, he raced outside, and no sooner had he done so than the building collapsed. Along the Bund, toward the bluff, huge fissures were opening up in the roads and devouring people by the hundreds. Later, he took refuge in the water, standing beside a man who was killed later by a hurtling log. Finally, after being picked up by a Japanese sampan and conveyed to a French mail boat, from which he swam to a U.S. freighter, he was placed aboard the Empress of Australia.

George Mitchell Thomas, who has been appointed Commercial Agent, Canadian National Rys., Hamilton, Ont., was born at Dundas, Ont., Apr. 21, 1876, and entered transportation service in Aug. 1898, since when he has been, to 1903, in office, chief clerk, on the road, and Soliciting Agent, for Beaver Line Steamships, afterwards owned by Elder, Dempster & Co., and in 1903, taken over by the C.P.R. as the nucleus of its Atlantic steamship service; Apr. 1903 to Feb. 1, 1919, travelling Freight Agent, Canadian Government Rys., all at Toronto; Feb. 1, 1919, to July 1920, District Freight Agent, Canadian National Rys., Hamilton, Ont.; July 1920 to Sept. 1923, General Agent, Canadian National Rys., Windsor, Ont.

Sir Henry Thornton, President, Canadian National Rys., has taken Capt. A. Joly de Lotbiniere's house, 591 Pine Ave. West, Montreal, for the winter.

Lady Van Horne and Miss Van Horne, were expected to return to Montreal, at the end of October, from their summer place, Covenhaven, St. Andrews-by-the-Sea, N.B. They recently contributed \$1,000 each to the Japanese relief fund.

R. C. Vaughan, Director of Purchases and Stores, Canadian National Rys., whose office was moved from Toronto to Montreal in March, has taken a house at 487 Mount Pleasant Ave., Westmount, Que., and removed his family there from Toronto. They spent most of the summer at his country place at Cedarhurst, Ont.

D. Wanklyn, son of F. L. Wanklyn, General Executive Assistant, C.P.R., and his wife returned to Montreal Oct. 11 from Europe, where they spent their honeymoon. They were among the guests at a dinner given by Mr. and Mrs. D. Forbes Angus, in honor of Lord Renfrew, Oct. 12.

S. R. Weston, formerly Assistant Chief Engineer, New Brunswick Electric Power Commission, who has been appointed Chief Engineer, vice C. O. Foss, resigned, graduated from New Brunswick University in 1914 after spending some summers surveying for the New Brunswick Ry. Co. After graduation he did general survey work until 1916, when he was appointed transitman on the St. John & Quebec Ry. location survey from Gagetown to Westfield, N.B., and in Sept. 1916 he was appointed engineer in charge of construction of that line from Evansdale to Browns Flats. In April 1918 he was appointed Chief Engineer, Midland Coal Co., Salmon Arm, B.C. In April 1920 he was appointed Assistant Chief Engineer, New Brunswick Electric Power Commission, in charge of hydraulic work, Musquash development and general field construction.

Frederick Ernest Whelpley, who has been appointed Treasurer, Atlantic Region, Canadian National Rys., Moncton, N.B., was born at St. John, N.B., Aug. 20, 1861, and entered transportation service May 1, 1893, since when he has been, to Dec. 1, 1893, clerk, Hamburg-American Steamship Co., Montreal; Dec. 1, 1893, to May 1, 1903, outward freight clerk, Dock Department, same company, Hoboken, N.J.; May 1, 1903, to June 1, 1915, cashier, Canadian Government Railways, Moncton, N.B.; June 1, 1915, to Feb. 19, 1923, Assistant Treasurer, Canadian Government Rys., Moncton, N.B.; Feb. 15, 1923, to Oct. 1923, acting Treasurer, Canadian National Rys., Moncton.

John Wishart, who died in Montreal recently, aged 69, was for 39 years in C.P.R. service, latterly as locomotive inspector at Angus shops. He was buried at Kingston, Ont., where he was born, and where he served his apprenticeship at the locomotive works.

Extensive Damage by Hurricane on Land and Sea.

One of the most severe hurricanes that has visited the North Atlantic coast, swept over portions of Nova Scotia, New Brunswick, Quebec and Newfoundland, Oct. 1, which, with following high winds and rain, resulted in considerable damage to shipping around the coasts, and interruption of railway traffic in some sections. Cape Breton Island and Newfoundland suffered the worst, so far as interruption of railway traffic was concerned. This was due, not so much to washouts, but to telegraph wires being blown down across the lines, and damage to railway buildings. The Ocean Limited, leaving Halifax, N.S., Oct. 1, was delayed for some hours, owing to a landslide about a mile and a half from Wentworth, N.S.; the railway bridge across the James River in Antigonish county was washed out; two extensive washouts were reported on the line between Canso and Sydney, and all traffic was suspended from Oct. 1. General traffic east of New Glasgow was resumed Oct. 4, but traffic on the Sydney-Halifax route did not become normal for some days afterwards. In Newfoundland, railway traffic was badly interrupted for some days.

Traffic on the Inverness Ry. & Coal Co.'s line on Cape Breton had to be suspended Oct. 1. It is reported that there was a bad washout on the Prince Edward Island Ry., near Midfill and St. Peter's Bay.

The fury of the storm was most severely felt at sea, and, at the time of writing (Oct. 19), reports continued to come in of damage to, and loss of, ships, with loss of life. The most serious loss was that of the 4-masted schooner Governor Parr, of Bridgewater, N.S., with the drowning of the captain and one of the crew, off New York; and the loss of the French s.s. Yport on Scatari Island, the crew landing safely. Among the reported damaged ships are:—Schooner E. C. Adams, Lunenburg, ashore in Northumberland Strait; schooner Chataqua, arrived in Port Hawkesbury, N.S., leaking badly and with loss of sails; tern schooner Cape Blomidon, ashore at Port Hawkesbury, apparently little damaged; Vera B., ashore at North Sydney, feared total loss; Alameda, loss of sails; E. C. Adams, ashore at River John, Pictou county; Chautauqua, from Gaspé, Que., for New York, put into Port Hawkesbury, N.S., leaking, with loss of sails and deck load. In addition, many other ships suffered more or less damage without being driven ashore.

The Newfoundland schooner Allan F. Rose broke from her moorings at St. Pierre, south of Newfoundland, and was reported, Oct. 2, to have been driven on the rocks and become a total loss, but a couple of days later she put in to Harbor Breton, Nfld., badly battered. The British s.s. Troutpool, owned by Pool Shipping Co., which ran ashore at St. Pierre recently, was broken in two and her stern carried some 300 ft. away, during the heavy storm and hurricane Oct. 2. The s.s. Auroch was reported ashore, but cleared herself and got into shelter at St. Pierre, being towed subsequently to Sydney, N.S., for repairs.

From Newfoundland it is reported that the following schooners had been caught in the storm and received damage:—Norman Sharp, total wreck at St. Lawrence; Alice Roberts and Jack Frost, ashore near Port au Bras, feared total loss; Domering, ashore near Beaverton, feared total loss; Ruby and Dorothy, ashore White Bay, leaking and has lost rudder; Electric Flash, ashore near Revenos, towed off Oct. 10, leaking badly; Jas. U. Thomas, ashore at Lamaline, and is expected to be refloated. Among the ships from which news was being awaited are the following:—Cavalla and Lucy Dibdin.

The Canadian National Rys. Coal Pile at Bridgeburg, Ont., containing approximately 150,000 tons, was reported to be on fire, Oct. 19. It was stated that the fire was in the heart of the pile, that it was estimated that about 11,000 tons had been destroyed, and that as much as possible was being hauled away by the trainload to another site.

U.S. Railway Consolidation Hearings.—The U.S. Interstate Commerce Commission issued a statement on Oct. 11, saying that hearings upon the subject of consolidation of U.S. railways, as provided for in the Transportation Act, will be closed upon the completion of a final hearing to begin on Nov. 16.

A record of safety in railway travelling in Great Britain was established last year, when only five passengers were killed in accidents, out of a total of 1,186,479,000 carried by the railways, or one in 200,000,000.

Traffic Orders by Board of Railway Commissioners.

Grain Rates from Prairie Provinces to British Columbia Coast Points for Export.

General order 384, Oct. 10.—Re rates on grain from points in Alberta, Saskatchewan and Manitoba to Vancouver and other British Columbia coast points, for export: Whereas, by order in council 2007, dated Oct. 2, 1923, the Governor in council referred the subject of the said export grain rates from points in the said provinces to Vancouver and other British Columbia coast points, to the Board for immediate determination and such effective action as the Board may deem necessary. After fully considering the matter, and applying the principles set forth in the Board's judgment, dated Oct. 10, 1923, and for the reasons therein contained, the Board orders that the current rates on grain and grain products to Pacific coast ports for export be reduced uniformly 10%; and that all the railway companies subject to the Board's jurisdiction file tariffs, effective not later than Oct. 22, showing such reduction; also that all milling, malting, storage, cleaning, or bagging in transit privileges on grain now contained in the tariffs be unaffected by this order. In applying the said rates, fractions shall be disposed of as provided for in order in council 1863, dated July 27, 1918.

The judgment on which the foregoing order was based is given fully on another page of this issue.

British Columbia Electric Railway Fares.

34,213, Sept. 24.—Re application of Broadview Ratepayers' Association for an order reducing the fares on the British Columbia Electric Ry.'s Burnaby Lake line: Upon hearing the application at Vancouver, June 29, 1923, the applicant and the railway company being represented, and what was alleged, the Board orders that the application be refused.

Minimum Carloads of Brick, Crushed Stone, etc.

34,216, Sept. 24.—Re Canadian Freight Association's application for a rehearing of the Milton Pressed Brick Co.'s complaint against certain minimum carload provisions contained in special tariffs of the railway companies, applicable to carriage of brick, crushed stone, and other construction materials: Upon hearing the matter at Ottawa, Sept. 18, the Canadian Freight Association, and the Milton Pressed Brick Co. being represented, and what was alleged, the said Milton Pressed Brick Co. consenting, the Board orders that order 22,963, Dec. 4, 1914, made herein, be rescinded.

Express Rates on Crabs from Vancouver to Ontario.

34,236, Sept. 27.—Re complaint of L. Perrin & Co., Vancouver, B.C., against the express rates on crabs, in ice, from Vancouver to Toronto, Hamilton and Fort William, Ont.: Upon hearing the matter at Vancouver, June 29th, 1923, the complainant and the Express Traffic Association of Canada being represented at the hearing, and what was alleged, the Board orders that the complaint be dismissed.

This decision has some bearing on the question of what constitutes discrimination, and also throws some light on the considerations which call for the putting in of commodity rates. L. Perrin & Co., who ship crabs east from the Pacific coast by express, applied to the Board

for a commodity rate on their product when shipped to Fort William, Toronto or Hamilton, Ont., claiming that crabs should take the same special rate as fish. The tariff provides that "Crabs will be charged for at the same rates as on fresh fish in less than carloads, from shipping points named herein to Alberta, British Columbia, Saskatchewan, and Manitoba (Winnipeg and west only)." Fresh fish get a commodity rate, from Vancouver to Toronto and Montreal, of \$6.70 per 100 lb. The crabs take the fresh fish rate of \$4.30 from Vancouver to Winnipeg, but to Toronto and Montreal they take the 1st class rate, which is, to Toronto, \$15.95 per 100 lb., and to Montreal, \$16.20. The Board's judgment pointed out that discrimination hardly entered into the matter, as there are no crabs of the variety shipped by the applicant to be found on the Atlantic coast, while, in so far as rate discrimination as between fish and crabs is concerned, the volume of movement has to be taken into consideration. The applicant had only 120 lb. of crabs a day to ship east of Winnipeg. The applicant urged that the Board at least put in a rate which would not be more than the commodity rate to Winnipeg, plus the 1st class rate beyond, which would have made the rate to Toronto \$13.20 per 100 lb., and to Montreal, \$14. The Board's judgment stated that while it should be, and has been, held that no through rate should be in excess of the sum of the locals, the mere fact of there being a commodity rate to some intermediate point is no reason that such a rate should be calculated as part of a through rate to a point beyond. It said: "A commodity rate is granted having in mind the conditions of traffic existing between the two points covered by the commodity rate. If the commodity rate is to be taken as the measure of one factor in a through rate to a point beyond, then it necessarily follows that similarity, if not identity, of circumstances and conditions should apply as between the movement on the commodity rate alone and the movement where the commodity rate is used as a factor in building up a through rate to a point beyond." The Board held that the express company was not guilty of discrimination in refusing a commodity rate, and dismissed the application.

Ice Cream Mix and Bulk Evaporated Milk Express Rates.

34,271, Oct. 5.—Re application of National Dairy Council of Canada for an order requiring that ice cream mix and bulk evaporated milk be carried by express under commodity cream tariffs: Upon hearing the application at Ottawa, April 17, the applicant and the Express Traffic Association of Canada being represented at the hearing, and what was alleged, the Board orders that the application be refused.

Express Rates on Vegetables from Alberta and British Columbia.

34,281, Oct. 5. — Re complaint of Plunkett & Savage, of Calgary, Alta., and Scott National, Limited, of Medicine Hat, Alta., with regard to express rates on fresh vegetables from points of production in British Columbia and Alberta: Upon hearing the matter at Calgary, July 10, the complainants and the Express Traffic Association of Canada being represented, and what was alleged, the Board orders that the complaint be dismissed.

The Board's judgment on which the foregoing order was issued, was based on the principle that where a complaint of rate discrimination is raised on mere comparison of distance, it must be supported by other evidence before it can be held valid, and that, in many cases, mileage is not a basis for commodity rates. The applicants, who ship fresh vegetables to Winnipeg by express, asked for commodity rates on the same basis as apply to similar shipments from British Columbia during certain months, based on distance; that the effective date of application of the commodity rate be made one month earlier, and that a charge be added to the commodity rate to cover pick-up service when performed by the express company at shipping points. Applicants stated that the rate from Medicine Hat is \$3.85, while the commodity rate from Vancouver is \$3.20 between May 15 and Nov. 30, and \$8.25 during the remainder of the year. The Board pointed out that by Dominion Express Co.'s tariff C.R.C. 4585 there is a commodity rate of \$3.05 applicable from Medicine Hat during the same period the commodity rate is applicable from Vancouver. It was also developed that the vegetables from B.C. are field grown, and move in large lots, while those from Calgary and Medicine Hat are grown in hot-houses, and move in smaller lots. The Board pointed out that the express company had satisfactorily regulated the date of coming into effect of the commodity rate to accord with crop conditions, and would presumably continue to do so, that the request re cartage charges would be satisfactorily disposed of if the applicants advised all shippers as to present tariff provisions, and that a commodity rate based on distance could not be ordered from Calgary and Medicine Hat for the reasons indicated above.

Freight on Logs from Fernie to Calgary.

34,324, Oct. 18.—Re complaint of A. Farquharson, of Fernie, B.C., against service furnished and rates charged on logs by Great Northern and Canadian Pacific Rys. from Fernie to Calgary, Alta.: Upon hearing the complaint at Fernie, July 9, 1923, the Great Northern Ry. being represented, and the applicant appearing in person, and what was alleged, the Board orders that the complaint be dismissed.

Grand Trunk Ry. Junior Securities.

The London, Eng., committee representing the holders of junior G.T.R. securities, was called to meet Oct. 30, to review the position in which they are placed. The Dominion Government, at the beginning of October, issued two pamphlets dealing with the matter, one containing a summary of the justification of the Government's course, and the other covering the case in detail. The latter was prepared by G. W. Yates, assistant Deputy Minister of Railways and Canals.

Victoria Bridge Tolls.—A press report says it is suggested that as the Victoria Jubilee bridge across the St. Lawrence River at Montreal, built by the G.T.R., is now public property the tolls charged for passing over it might be abolished. Canadian National Railways officials are stated to have replied to a query on the matter to the effect that nothing of the kind is contemplated, and that if anything at all was done it would have to be on the initiative of the Dominion Government.

Railway Development, Projected Lines, Surveys, Construction, Betterments, Etc.

Burrard Inlet Tunnel and Bridge Co.—The directors made a call recently on the shareholders for the payment of the outstanding 90% of the subscribed capital stock issued, payable in 10% instalments, the first to be paid Sept. 24, 1923, and the final one on Feb. 11, 1925. With the exception of some few shares held by private persons, the entire capital stock is held by the cities and other municipalities round Burrard Inlet, which are also guaranteeing the bonds.

The Board of Railway Commissioners has authorized the erection of an overhead crossing for a roadway over the C.P.R. at the south end of the projected bridge across the second narrows of Burrard Inlet.

The Northern Construction Co. has the contract for the construction of the bridge and approaches, at a cost of approximately \$1,250,000, towards which the Dominion Government and the British Columbia Government are contributing \$100,000 each. The bridge, with approaches, will be 3,000 ft. long, of which about 500 ft. will be approaches built up on piles filled in; one 300 ft. span, one 185 ft. single leaf bascule span, and one 150 ft. approach span, with shorter spans across Lynn Creek. The floor of the bridge will be 12 ft. clear above high water. The bridge is designed to carry a single track railway, with a roadway for general traffic cantilevered out on each side. We are officially advised that the general contractors have given a contract to Strauss Bascule Bridge Co. for furnishing plans and specifications of its heel trunnion type of bascule bridge for the 185 ft. span. Orders are reported to have been given for casting the cylinders for the bridge, and other preparations are said to be made for an immediate start on the foundation work. It is reported that the bridge may be completed within 18 months, although the contract allows two years. (Sept., pg. 439.)

Canadian Niagara Bridge Co.—A recent press report stated that it was proposed to proceed immediately with the construction of the projected bridge across the Niagara River, in which the New York Central Rd., the Michigan Central Rd., and the Toronto, Hamilton & Buffalo Ry. are interested. The structure will consist of 2 bridges, each with a draw span, one from Black Creek, Ont., to Goat Island, and the other from Goat Island to the U.S. mainland. (Sept., pg. 439.)

Edmonton, Dunvegan & British Columbia Ry.—Central Canada Ry.—We are officially advised that agreements have been entered into between the C.P.R. and the Alberta Government under which the C.P.R. agrees to include the projected extensions in the general agreement covering the operation of these two lines. The extension on the E. D. & B.C. Ry. is from Grande Prairie, the terminus of the branch from Spirit River, for 15 miles westerly to Sec. 21-7-8 west of the 6th meridian, and that on the C. C. Ry. is for 13 miles westerly from Berwyn, the present terminus. The general contract for both extensions has, we are officially advised, been let to J. W. Mohler, Camrose, Alta., the contract covering grading, the erection of right of way fences, trestle, bridges and telephone lines. The general contractor is reported to have let a subcontract to W. F. Donald for grading on the first 13 miles on the extension out of Grande Prairie, and for

grading on the other two miles to local farmers. A recent press report stated that 3 miles of grading had been done out of Grande Prairie, and that material for the 42-bent timber trestle across Bear Creek, was going forward. The general contractor is reported to have sublet the grading on the Berwyn westerly extension to McDonald & Kinney, who are reported to have had a large number of teams at work since Aug. 28. Galvanized steel culverts have been delivered for both lines; and ties and posts and other material are being delivered at the starting point of both extensions. We are officially advised the tracklaying will be done next year by the Alberta Railways Department's forces. No contract has been let for the supply of rails and fastenings and probably will not be for some time. (Sept., pg. 439.)

Fort Alexander Ry.—Grading is reported to have been completed on the projected line from Beconia, Man., mile 52, on the Canadian National Rys. Winnipeg-Victoria Beach branch, to Fort Alexander, Traverse Bay, Lake Winnipeg, with the exception of about 8 miles on low lying land near Fort Alexander. The J. D. McArthur Co., which is doing the construction, is reported to have moved a large dredge from Selkirk to Fort Alexander, to dig a ditch to drain the area known as the Julius bog, so as to enable the line to be completed. Ties and rails are reported to have been distributed along the completed roadbed from Beconia. (Sept., pg. 439.)

Kettle Valley Ry.—We are officially advised that the following bridges over the Nicola River, B.C., which were built in 1906, are having new steel structures placed on the original concrete abutments, the contract for the supply of the steel having been given to Canadian Bridge Co., Walkerville, Ont. Bridge 21.4, height above water, 12 ft.; existing 150 ft. Howe truss span being replaced by a 150 ft. through truss span. Bridge 28.4, height above water, 16 ft.; existing 150 ft. Howe truss span being replaced by a 150 ft. through truss span. Bridge 30.8, height above water, 12 ft.; existing 100 ft. Howe truss span being replaced by a 100 ft. through truss span. Bridge 33.7, height above water, 10 ft.; existing 100 ft. Howe truss span being replaced by a 100 ft. through truss span. Bridge 39, height above water, 9 ft.; existing 184 ft. Howe truss span being replaced by a 184 ft. half-through plate girder span.

Michigan Central Rd.—A press report states that, during the summer, 200,000 new ties were placed on the Canadian lines, and that 78 miles of new rails were laid, and 12 miles of track ballasted with stone. The new extension yard at St. Thomas is reported to be completed, except for track laying. (Sept., pg. 439.)

Pacific Great Eastern Ry.—The British Columbia Minister of Railways made an inspection, recently, over the completed line, and also the unfinished line into Prince George, B.C. The latter section is reported to have been found in fair shape. The B.C. Minister of Public Works also made a trip over the line, recently, and through the surrounding territory, and went on to Summit Lake, on the Alberta boundary. On his return to Victoria he was reported to have referred to the work done by the Public

Works Department in constructing wagon roads from the inland valleys to the main roads, and so giving connection with the P. G. E. R., and to have said that this policy would be continued, to promote settlement along the line, for which the Government is reported to be preparing elaborate plans.

Sydney & Louisburg Ry.—A press report states that 2 miles of line are being built from Waterford, mile 8 from Sydney, N.S., to Lingan.

Timiskaming & Northern Ontario Ry.—The Lieutenant Governor of Ontario, accompanied by the Premier of Ontario, G. W. Lee, Chairman of the T. & N. O. Ry. Commission, and several others, left Toronto, Sept. 12, for North Bay, whence they travelled over the T. & N. O. R. to Cochrane, then inspected the extension under construction to near New Post on the Abitibi River; and then went over the route of the projected further extension to Moose Factory, returning by aeroplanes. On the return of the party to Toronto Sept. 29, Premier Ferguson, in a press interview, reviewed the situation, adding that he proposed next spring to investigate the fish and mineral developments of the Hudson Bay area, but the Government would not reach any conclusion as to building the proposed extension without being fully assured that the prospects warranted it. The Government did not propose to rush into any project.

Regarding the 70-mile extension from Cochrane, track has been laid to mile 44, at the second crossing of the Abitibi River, and while considerable grading has been done on the remaining 26 miles, it is not expected that the contractors will complete their work until July or Aug., 1924, instead of October, 1923, as specified. The extension to Moose Factory has been located, and plans and profiles have been made, but the commissioners, according to a statement made by Mr. Lee before he left North Bay, decided not to let any further contract at present, owing to the backward construction on the extension to near New Post.

Considerable progress is reported to have been made by Sinclair Construction Co., Ltd., with grading the branch line from Swastika to Larder Lake, 25 miles, and a press report states it is expected to have track laid by Dec. 31 on the first 17 miles, to near Blanche River. Application is being made to the Dominion Minister of Public Works for approval of the site of the projected bridge across Blanche River, in Mining Claim L9679, Gauthier Tp.

We are officially advised that the T. and N. O. Ry. Commission is investigating matters in connection with the proposed construction of a branch line into the South Lorrain mining area. W. R. Maher, Locating Engineer, is in charge of the work, under the direction of S. B. Clement, Chief Engineer. G. W. Lee, Chairman of the Commission, is reported to have said in a recent interview at Cobalt:—"The mining progress in the South Lorrain silver field has for some time engaged our attention, and we have kept the really remarkable developments there under close observation. Acting under instructions from the Prime Minister, the Commission is surveying the field so that it will have before it the best route, estimated costs and other information, should it be decided at any time to proceed with the construction

of a branch to serve South Lorrain and the favorable country contiguous to Cobalt. Three routes leading from Cobalt station will be surveyed, one from North Cobalt following the general line of the motor road, one extending the Kerr Lake branch, and one leaving the main line at Cassidy, three miles south of Cobalt station. Because of its engineering features and the geological formation of the country that would be traversed, the Commission is inclined at this moment to favor the route from Cobalt via Cas-

sidy. But the whole subject will be thoroughly examined before a decision is made. No information respecting the construction of the branch, which would be between 21 and 22 miles long, can be given just yet." (Sept., pg. 440.)

Tenders were received to Oct. 18 for the supply of 350,000 ties, either for the entire quantity or in lots of 25,000, 50,000 or 100,000.

Vancouver, Victoria & Eastern Ry. and Navigation Co.—We are officially advised that the plans for the rearrange-

ment of the terminal facilities at Guichon, B.C., approved by the Board of Railway Commissioners, show that it is proposed to abandon the dock on which the station and stockyard are located, and which is a considerable distance from the village, and not having been used for several years, needs extensive repairs. As it is not now required for a connection between land and water traffic, it is to be abandoned and the station and stockyard are to be moved to a more central and convenient situation.

Canadian National Railways Construction, Betterments, Etc.

St. Peters Subdivision Diversion.—The reason for the building of this diversion from mile 3.70 from Point Tupper on the Sydney Subdivision, to mile 5.65 on the St. Peters Subdivision, 2,712 ft., which was described in our October issue, is to shorten the line and avoid the maintenance of 5.65 miles of track. The material reclaimed from the abandoned line will more than pay for the diversion. (Oct., pg. 473.)

St. John, N.B., Improvements.—Plans were reported to have been received by the city council recently, showing the land required by the railways for the proposed new development in the vicinity of Lombard and Southwark streets.

Fredericton Locomotive Facilities.—A conference is reported to have taken place Oct. 11, between the railways' officials and representatives of the Fredericton City Council, with reference to the locomotive house there, construction work on which was suspended some time ago.

Hardwood Ridge to Minto.—In the item about the 4.88 miles spur line which is being built from Hardwood Ridge to Minto coal mines, published in Canadian Railway and Marine World for October, Hardwood Ridge was mentioned as being at mile 58.84, Chester Subdivision. It is on Chipman Subdivision, Edmundston Division, Atlantic Region. At the time of writing (Oct. 19), the clearing on the whole line is completed. The grading of the sidings at Hardwood Ridge, and of the first 2 miles of the spur, is about 90% complete, the 3rd and 4th miles about 40% complete, and the 5th mile approximately 50% complete. The substructure of the bridge at Newcastle Stream is expected to be finished by about Oct. 22; culvert work on the first 2 miles is 60% complete, on the 3rd mile 30%, and on the 4th mile nothing done, on the 5th mile 50% complete. The tracklaying of the sidings at Hardwood Ridge is 90% complete and about 40% of the tracklaying on the 5th mile is done. The contractors are doing the grading at the mines end of the spur with a steam shovel, and laying track as they advance. Fencing is completed on the first three miles from Hardwood Ridge, about 20% complete on the 4th mile, and nothing done on the 5th mile. The contractors' progress was hampered a good deal in the commencement of the work by difficulty in getting labor and teams, but they have increased their force steadily, and during the fine weather of the last three weeks, made good progress; they will not, however, be able to finish the work by the contract date, Nov. 1. The progress of the work depends so greatly on the weather, that it is very difficult to say when it will be all completed, but if fine weather prevails, all except the ballasting and the placing of the girders at Newcastle Stream should be finished between Nov. 20 and 30. (Oct., pg. 473.)

St. Malo Shops.—A permit has been granted by the Quebec City Council, a press report states, for the erection of a storage annex to the St. Malo shops there, to cost approximately \$37,000.

Donnacona Cutoff.—A contract for the grading of this cutoff between Donnacona and Grand Mere, Que., which was described fully in our October issue, has been let to the Federal Construction Co., Toronto, to be completed by Aug. 1, 1924. The rails will be laid by C.N.R. forces. (Oct., pg. 473.)

Three Rivers Development.—In connection with plans which are reported to be under consideration by the Marine Department for the improvement of the port of Three Rivers, Que., a press report says that the C.N.R. will build a branch line from St. Barnabe, west of Shawinigan Falls, to Three Rivers, about 22 miles. Of course, this is merely conjecture, as even had the management decided on it, there is no parliamentary appropriation.

Turcot Yard Extension.—An extensive programme of rearrangement and enlargement is reported to be practically completed at the West Turcot yard. The work includes the extension of the 6 intermediate tracks so as to accommodate 660 cars; the laying of a track, accommodating 80 cars for the handling of business to the Jacques Cartier Jct. Ry., bringing the capacity of the yard up to 1,900 cars. The ground on which the work was done was soft and swampy, which involved the placing of 81,000 cu. yd. of rock ballast. A 20 ft. extension has been made to 4 of the locomotive house stalls to accommodate the new 6000 class locomotives.

Victoria Jubilee Bridge.—The Automobile Club of Canada is reported to have asked the Canadian National Rys. to extend the footpath on the east side of this bridge, at Montreal, to enable it to be used by vehicles for one-way traffic. The abolition of tolls is also asked.

Ottawa Crosstown Tracks.—The Mayor of Ottawa received from C. S. Czowski, Chief Engineer of Construction, Canadian National Rys., a plan showing what the management is prepared to do in regard to the removal of crosstown tracks. A press report says the plan shows how 6 of the present tracks may be removed from between Bank and Elgin streets, 4 tracks from between Bank and Lyon streets, and 3 tracks from between Lyon and Bronson streets. This reduction in the number of tracks would leave enough trackage accommodation for the present industries, including a through service line to the Chaudiere. In replying to questions by the mayor, Mr. Czowski wrote:—"The President's offer for abandoning through trains over the line from near South March into Ottawa, was to include the removal of the tracks on this line from

South March as far as the first industry, which at present is that of Burton and Honeywell, just east of our Graham Bay station, providing the City of Ottawa would pay the cost of the removal of the tracks and the cost of making a track connection of our lines near South March, and that then we would be ready to dispose of this abandoned line to the city at a valuation of the property alone. The cost of removing these tracks and making the connection at South March is estimated to be \$50,000, and it is considered that the right of way is worth about \$5,000."

Mimico-Port Credit Third Track.—It was reported, Oct. 18, that the third track between Mimico and Port Credit, Ont., was completed and ready for official inspection prior to being placed in operation. Particulars of this work were given in Canadian Railway and Marine World for August, pg. 378.

Nipissing Jct. Connection.—The Board of Railway Commissioners passed an order on Oct. 4, authorizing the C.N.R. to connect the G.T.R. line with the Canadian Northern Ontario Ry., near Nipissing Jct., Ont., and also passed another order on the same day authorizing the opening of the connection for traffic.

Longlac-Nakina Cut-Off.—We were advised Oct. 20 that Foley Bros. & Hervey would complete their contract on time by Oct. 31, including grading, bridging, concrete work and everything pertaining to the construction, with the exception of track laying and ballasting, which C.N.R. forces are doing. Contractors bid on this work late in 1922, but the contract was not let for some six weeks afterwards. Foley Bros. & Hervey started in the latter part of Jan. 1923 to build camps and tote roads, but the six weeks they had lost delayed the work considerably, as they encountered deep snow which made the building of tote roads difficult. In addition to the original contract, Foley Bros. graded Nakina yard, which is a terminal of considerable extent, and involved quite an addition to the yardage to be moved under the original contract. O. W. Swenson, Secretary-Treasurer of Foley Bros., St. Paul, Minn., was in direct charge of the work, with headquarters at Longlac. At the time of writing (Oct. 22), some 16 miles of track has been laid from Nakina toward Longlac and somewhat less than a mile from Longlac toward Nakina. Cold weather and a heavy snowfall is reported, which will probably delay the completion of the track laying somewhat. (Oct., pg. 473.)

Neebing Terminal Yards.—The Board of Railway Commissioners has authorized the opening for traffic of the portion of the revised eastbound line, mile 36.65 to mile 38.59, Kashabowie Subdivision, Port Arthur Division, Manitoba District, and also the connection between

the revised line at mile 36.56, Kashabowie Subdivision, and mile 30.52, Graham Subdivision, 0.66. These works are part of the rearrangement necessary in connection with the laying out of the Neebing yards. (Oct., pg. 473.)

Kashabowie Subdivision Second Track.—The Board of Railway Commissioners has authorized the opening for traffic of the second track between Twin City Jct. and Kakabeka Falls, Ont., 10.31 miles. (Aug., pg. 378.)

Regina Division Betterments.—The betterments authorized to be done during this year are reported to have been completed on the Regina Division, Saskatchewan District. The principal works are the extension of tracks in the west yard at North Regina, to accommodate 250 cars; the filling in of 7 trestle bridges, laying 65 miles of track with 85 lb. rails and ballasting 25 miles on Glenarm Subdivision; filling a number of trestle bridges and enlarging earth cuts, on Avonlea Subdivision; enlarging cuts and filling bridges on Riverhurst Subdivision; ballasting 56 miles on Gravelbourg Subdivision. New water supplies have been provided at Avonlea and Kipling, and construction is being proceeded with on the Condie dam for the Regina water supply. The water supply works are being done by contract.

Lintlaw to Kelvington.—The Board of Railway Commissioners has authorized the opening for traffic of the line between Lintlaw and Kelvington, Sask., mile 103.3 to 114, Preeceville Subdivision, Dauphin Division, Manitoba District. This is an extension of the line from Swan River, which is projected to a junction with the Humboldt-Melfort line.

Hanna Water Supply.—Tenders were received to Oct. 10, for raising the dam and spillway of the water supply at Hanna, Alta.

Ties for British Columbia Lines.—A press report states that contracts have been awarded for taking out 2,000,000 ties during the winter along the Grand Trunk Pacific Ry., as a result of which the Premier of British Columbia is reported to have said, Oct. 8, that large numbers of settlers were going into the Burns Lake and Vanderhoof districts.

Southern New England Ry.—A recent special press dispatch from Providence, R.I., to a Boston, Mass., paper gave a circumstantial account of the present state of grading and other works on the Southern New England Ry., reported to be under construction from Palmer, Mass., to Providence, and stated that engineering parties were in the field working rapidly running lines and replacing working data at various places with a view of resuming construction. We are officially advised that no surveys are being made on this line. (Oct., pg. 474.)

Railway Accidents.—The number of railway accidents throughout Canada, reported to the Board of Railway Commissioners during September, was 247, in which 1 passenger, 1 employee and 1 other were killed, and 28 passengers, 170 employees and 66 others were injured. Included in "others" were 8 persons killed, and 45 injured, in highway crossing accidents, in which the crossings were protected in 5 cases by bell. In 20 of the 27 highway crossing accidents reported, automobiles were involved, 6 persons being killed and 39 injured. Three highway crossing accidents involved pedestrians, 2 being killed and 1 injured, while vehicles or wagons were involved in the remaining four, 4 persons being injured.

Freight and Passenger Traffic Notes.

The Canadian National and Canadian Pacific Rys. are reported to have loaded 82,219 cars, representing 136,958,448 bush. of grain, from Sept. 1 to Oct. 14, compared with 80,828 cars, representing 130,287,194 bush., for the corresponding period of 1922.

The Canadian National Rys., which have for some time been selling wine and beer on their dining car service between Montreal and Quebec, under the Quebec licensing law, are reported to be completing arrangements for selling those beverages on the Montreal-Halifax trains within the Province of Quebec.

The Canadian National Rys. ran three special trains from Halifax, N.S., Oct. 6, two for New York and one for Detroit, Mich., to carry immigrants landed by the White Star liner Baltic, which had been diverted to Halifax, from New York, in order to obtain some advantage under the United States immigration laws.

The C.P.R. announced, Oct. 20, that it would run special trains for game shooting parties from Toronto to Sudbury, Ont., Oct. 30 and Nov. 1 and 2, leaving Toronto union station at 10.20 p.m., and making all camp stops north of MacTier. The equipment consists of standard sleepers, first class cars and baggage cars.

The Board of Railway Commissioners, on Oct. 16, refused the application of Queen's University, Kingston, et al, for an order to extend to the university and the city, the same privileges in the matter of excursion rates on railways in connection with annual football games as are granted Montreal, Toronto and other large cities.

Sir Henry Thornton, President, Canadian National Rys., is at the time of writing (Oct. 16) expected to attend a meeting at Bonaventure, Que., Oct. 30, to discuss plans for improving the service on the Quebec Oriental Ry., and the Atlantic, Quebec & Western Ry. These lines extend from Matapedia, Que., on the C.N.R., to Gaspé, Que., 202 miles.

The Canadian National Rys. have put on a train leaving Midland, Ont., 7.15 a.m. daily, except Sundays, with through passenger car for Toronto. Returning, a through car is carried on train leaving Toronto 4.50 p.m. daily, except Sundays. This enables the making of a trip in either direction without a change, and gives Midland passengers over 5 hours in Toronto.

The Port Arthur, Ont., City Council is endeavoring to secure from the Canadian National Rys. some arrangement for the transportation to and from their work of the railways' employees resident in the city, but working at the newly-opened Neebing yards. A suggestion that a special train be operated for them has not apparently found favor with local officials, and an appeal has been made to A. E. Warren, General Manager, Western Region.

The Canadian National Rys. has, a press report states, arranged to run special trains from the Pacific coast to connect with the trans-Atlantic steamers at Halifax, N.S., for the Christmas sailings. The first train will leave Vancouver Dec. 3, at 9.30 p.m., to connect with the White Star liner Doric, sailing Dec. 9; another will leave Vancouver Dec. 8, at 9.15 a.m., to connect with the Pittsburgh, sailing for Southampton, and the Canada, sailing for Glasgow.

The Greater Winnipeg Water District Ry. put its winter timetable in effect on Oct. 1. The gasoline car is operated out of St. Boniface, Man., on Mondays and Fridays, instead of Tuesdays, Thursdays and Saturdays, returning Tuesdays and Saturdays, instead of Mondays, Wednesdays and Fridays, as theretofore. This car operates only on a portion of the line, a steam freight and passenger train being run from St. Boniface to Shoal Lake, on Wednesdays, returning the following day.

The Canadian National Rys. made the usual arrangements for special train service in connection with the deer shooting season. Train 39, which runs tri-weekly from Toronto to Parry Sound, was scheduled to run through to Key Jct., Oct. 31, Nov. 2, 7, 9, 12, 14, 16 and 19; and no. 40, southbound, will run from Key Jct., instead of Parry Sound, on Nov. 1, 3, 8, 10, 13, 15, 17 and 20. A special train was scheduled to run from Toronto to Key Jct. Oct. 31, Nov. 2 and 3, and another from Toronto to North Bay, Oct. 31 and Nov. 2.

The Canadian National Rys. discontinued the twice a day car ferry service between the New Brunswick mainland at Tormentine, and Prince Edward Island at Borden, Oct. 29, and commenced operating the winter service of one trip in each direction daily, except Sundays. The connecting train leaves Sackville at 1 p.m., reaching Tormentine at 2.30 p.m., and leaving Borden at 4.05 p.m., reaching Emerald Jct. at 5 p.m., Charlottetown at 6.20 p.m., Summerside at 6 p.m., and Tignish 9.35 p.m. The westbound trains leave Summerside 7 a.m., Charlottetown 6.45 a.m., Emerald Jct. 8.15 a.m., reaching Borden at 8.50 a.m., and leave Tormentine at 10.20 a.m., reaching Sackville at 4.45 a.m.

The Canadian Pacific and Canadian National Rys. will grant special fares to residents in British Columbia and the prairie provinces, to points in Eastern Canada, to enable them to visit their friends. Round trip tickets will be issued at a fare and a third, from Dec. 1 to Jan. 5, 1924, inclusive, the return trip to be made within three months from date of issue. In addition, reduced fares will be given from stations in Winnipeg and Emerson west in Manitoba, Saskatchewan and Alberta, to New Westminster, Vancouver and Victoria, on certain days in December, January and February, good to return up to April 15. Return tickets at single fare and a third will be issued at stations in Alberta and Saskatchewan between Dec. 1 and Jan. 5, to St. Paul, Duluth, Minn.; Chicago, Ill.; Kansas; St. Louis, Mo., and a number of other points in Iowa, Wisconsin, Nebraska and South Dakota, the return journey to be made within three months of date of issue.

Pere Marquette Ry. Earnings, Etc.—F. H. Alfred, President, is reported as stating as follows:—"Gross revenues this year will run about \$46,000,000. Traffic outlook is very good, and, while there is some feeling throughout the country generally that there will be a letting-up, I think we will have a continued heavy movement as good as we are now enjoying in our territory. This movement will be equal to the heaviest we ever had throughout the winter. As a whole, the 1923 traffic movement will exceed anything in Pere Marquette's history."

Railway Wages and Working Conditions in Canada and the United States.

Shopmen.—Details of the Canadian railway shopmen's application to the Railway Association of Canada for an increase in wage rates and the restoration of certain working conditions, were given in preceding issues of Canadian Railway and Marine World. Consequent on the negotiations between the Association's operating committee's sub-committee and officers of the American Federation of Labor's Railway Employees' Department, Division 4 (the shopmen's labor organization) failing to produce any agreement, the railway representatives refusing to accede to the employees' requests, the shopmen's officers sent out ballots to ascertain whether the men wanted negotiations continued with the Railway Association, or whether they wanted an application made for a board of conciliation and investigation, under the Industrial Disputes Investigation Act. The ballots were returned by the end of September, and on Oct. 2 it was announced that the majority of the men had expressed themselves as favorable to continuing negotiations, and that therefore further meetings with the Association's operating committee's sub-committee would be sought.

Maintenance of Way Employees.—Preceding issues of Canadian Railway and Marine World gave details of the Canadian railway maintenance of way employees' application for wage increases, the meetings held between the Railway Association of Canada's operating committee's sub-committee and the men's representatives, the railways' refusal to grant the increased wages, and the employees' request to the Labor Department for a board of conciliation and investigation under the Industrial Disputes Investigation Act, which was granted. The railways nominated R. T. Riley, Winnipeg, formerly a Canadian National Rys. director, as their representative on the board, and the employees nominated David Campbell, Winnipeg. In the absence of a joint recommendation as to a chairman, the Minister of Labor appointed E. McQuirk, Montreal. The board held its first meeting in Montreal on Oct. 9, when the railways were represented by Geo. Hodge, Assistant General Manager, Eastern Lines, C.P.R.; M. S. Blaiklock, Assistant Chief Engineer, Operation Department, Canadian National Rys.; A. E. Crilly, Chief of Wage Bureau, Canadian National Rys., and A. Freeman, Staff Registrar, Timiskaming & Northern Ontario Ry. The employees were represented by A. McAndrews, W. Aspinall, G. H. Cummings, P. Woods, and other maintenance employees' officers. Mr. McAndrews, in asking for an increase of 5c an hour, argued generally that present wages are too low, and that U.S. roads are paying considerably higher wages than railways in Canada are. On Oct. 10 the railways presented their case, which was, generally, that the wage increase sought is not justified at present, and that if it were granted, it would increase railway operating expenses about \$4,500,000 a year, which would necessitate charging higher rates for freight and passengers. The hearings were concluded on Oct. 16, and the case was left with the board for consideration. It was reported on Oct. 19 that the Board had submitted its report to the Labor Department. Press dispatches of Oct. 22 stated that the Board's unanimous decision was that the employees be granted 2c an hour increase, and that their representatives had signi-

fied their willingness to accept the award as satisfactory.

C.P.R. Telegraphers.—The application of C.P.R. employees, members of the Order of Railroad Telegraphers, for a board of conciliation and investigation under the Industrial Disputes Investigation Act to consider their dispute with the C.P.R., has been granted. The C.P.R. nominated J. B. Coyne, Winnipeg, to represent it, and the employees nominated David Campbell, Winnipeg. In the absence of a joint recommendation from Messrs. Coyne and Campbell, the Minister of Labor appointed Lt.-Col. O. M. Biggar, Ottawa, as chairman.

Consolidation of Clerical Workers' Unions.—The American Federation of Labor, at its annual meeting at Portland, Oregon, on Oct. 4 instructed the executive council to use its influence toward the consolidation of the Canadian Brotherhood of Railroad Employees, and the Canadian membership of the International Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees. The former is a purely Canadian organization, and the latter is affiliated with the American Federation of Labor. The Canadian Brotherhood of Railroad Employees has most of its membership on Canadian National lines, and the international organization's Canadian members are mostly on the C.P.R. The resolution recited negotiations which have been in progress for such a consolidation, and provided that the presidents of the American Federation of Labor and the Trades and Labor Congress of Canada should each assign a representative to assist in organizing every eligible railway and steamship employee in Canada into the international brotherhood.

Shop Staff Reductions.—Consequent on the seasonal slackening in work at the Canadian National and Canadian Pacific shops in Montreal which usually takes place about this time of year, after the motive power and rolling stock have been put in good shape for the crop movement, the two railways gave notice to a number of their junior shop employees that they were to be laid off. Some 400 were reported to have been laid off at the C.P.R. Angus shops on Oct. 1, and it was also reported that when the company gave notice that another 150 were to be laid off a few days later, the employees proposed to the management that the shops be placed on a 40-hour week instead of 44, and the management took the matter under consideration. The Canadian National management gave notice on Oct. 17 that short time and staff reductions would be introduced in the Montreal shops on Oct. 20, the notice being worded in such a way as to indicate that all men with less than 6 months' seniority would be laid off. It is reported that a 40-hour week will be placed in effect at the Canadian National Rys.' Stratford shops on Oct. 20, the time to be 8 hours for 5 days weekly, and that the last 50 men taken on will be laid off.

Canadian Brotherhood of Railroad Employees.—At the recent meeting in Calgary, Alta., it was decided to hold the 1925 meeting in Toronto. A resolution was adopted favoring the consolidation of the 16 standard railway labor organizations now existing in Canada, the aim being that the united body should maintain a strong international relationship with similar employees in the U.S., but should be entirely independent in

dealing with all problems of purely Canadian character.

As the result of action initiated by President A. R. Mosher, the brotherhood has established a "fact finding bureau," to gather and compile data on living costs, railway financial results, etc., presumably so as to enable the brotherhood's officers to be well armed with information on economic matters when wage matters are being discussed with the railways.

The Canadian Railway Board of Adjustment, No. 1, gave some decisions of general interest lately, among which was a dispute between the Canadian National Rys. Western Region management and the Brotherhood of Locomotive Engineers and the Brotherhood of Locomotive Firemen and Enginemen, concerning articles 3 and 7 of the schedule. The Board's decision was that the railways have the option of paying for any run as a basic day in each direction, under article 3, or as a short run in turn-around service under article 7. In the event of a run being paid for as a short run in turn-around service, the time is continuous. On assigned runs paid as short runs in turn-around service, the railways would necessarily designate the initial point of the run.

Other cases decided by the Board included a dispute between the Canadian National Rys. Western Region management and locomotivemen and firemen concerning article 24 of the schedule, which provides for men in work train service laid up away from terminal points, and for getting home for Sundays. The employees contended that if the railway fails to get men to their home terminal for Sunday, they should be paid for the day, while the management contended that if it moved the crew to the nearest terminal for Sunday, and did not tie the men up at, for example, a gravel pit, it was fulfilling the spirit of the agreement. The decision stated: "The employees' contention is sustained, it being understood that 'home terminal' as referred to in article 24, clause B, is the home terminal of the subdivision the employees are working on at the time Sunday release is requested."

Another dispute was as to the interpretation of article 2 of the schedule, paragraph E. The employees contended that doubling under that article is an arbitrary allowance, and that when locomotivemen are required to make side trips on subdivisions, they should be paid in keeping with the article. The management conceded that a minimum of 10 miles is to be allowed for a double, or a side trip, but only if the crew do not run into overtime, and not if they are paid constructive mileage, and that only to that extent is the provision arbitrary. The employees' claim was sustained on the understanding that no mileage included in an assigned run shall constitute a side trip.

United States.—The U.S. Railroad Labor Board is considering various applications from the Brotherhood of Railroad Signalmen for new rates of pay ranging from 60c an hour for helpers to \$1 for foremen; from the International Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, for wage increases for members employed on the Chicago, Rock Island & Pacific and other roads; from crossing watchmen on the Boston & Maine Rd., and from the American Train

Dispatchers' Association for rates of \$335 a month for assistant chief dispatchers, and \$300 a month for trick dispatchers on the Great Northern Ry. It is stated that the general chairmen of the Order of Railway Conductors and the Brotherhood of Railroad Trainmen will soon approach the U.S. railway managements for wage increases averaging 12%.

Inspector of Railway Operation Wanted.

The Civil Service Commission has invited applications to Nov. 8, for the position of Inspector of Railway Operation for the Board of Railway Commissioners, Operating Branch, in the Province of Quebec and east, at an initial salary of \$2,280, which will be increased upon recommendation for efficient service at the rate of \$120 a year, until a maximum of \$3,000 has been reached. This salary will be supplemented by whatever bonus is provided by law.

Duties.—Under supervision, to make observations and inspections of traffic on public carriers, with respect to adequacy of service and conditions of safety; to inspect the operations of railway companies as to compliance with regulations; to investigate and report on complaints as to service, car supply, and movement of traffic; to investigate causes of accidents; and to perform other related work as assigned.

Qualifications.—Education equivalent to high school graduation; three years of experience in the operating department of a railway, with some actual experience in the operation of trains; working knowledge of railway operating rules and regulations; ability to investigate and report on complaints as to station traffic; and causes of accident; quickness of perception; good judgment; tact; knowledge of both French and English. Though no definite age limit has been fixed for this competition, age may be a determining factor in making a selection.

Nature of Examination.—Subjects and weights as follows: education and experience; to be rated from the sworn statements, supporting documents and other evidence submitted by applicants, weight 3; practical questions, weight 4; oral examination, weight 3.

An eligible list may be established which will be valid for one year.

Locomotive Fuels.—The International Railway Fuel Association is investigating the relative values of various locomotive coals and fuel oils available for locomotive use, and will present the results at its next annual meeting. The U.S. Interstate Commerce Commission requires railways burning fuel oil to report the equivalent consumption of coal per freight ton mile, and per passenger car mile, on the assumption that $3\frac{1}{2}$ barrels of fuel oil is equivalent to one ton of coal. The relative value of coal and oil fuels is not represented by their comparative b.t.u. content, largely because of differences in stand-by losses, and the Fuel Association's studies are intended to establish the true relative efficiencies of coal and oil as locomotive fuels.

Railway Directors' Succession Duties.—The Quebec Public Accounts for the year ended June 30, 1922, show that the estate of the late Sir William Van Horne paid \$222,858.05, and that of the late R. B. Angus, \$256,043.88, for succession duties.

Railway Rolling Stock Orders and Deliveries.

Quebec Development Co. has received 4 class 0-4-0 locomotives, with 13 x 20 in. cylinders, from Montreal Locomotive Works.

The Canadian National Rys. have received 12 class 2-8-2 locomotives, cylinders 27 x 30 in., from Montreal Locomotive Works.

The Timiskaming & Northern Ontario Ry. has ordered 3 mikado locomotives from Canadian Locomotive Co., to be built to the same specifications as the 4 obtained from the same company in 1921.

The C.P.R., between Sept. 14 and Oct. 11, received the following rolling stock: 3 mikado locomotives, from Montreal Locomotive Works; 455 36 ft. steel underframe box cars, and 9 steel snow plows, from its Angus shops, Montreal; 250 75-ton steel coal cars, and 12 steel mail and express cars, from Canadian Car & Foundry Co.

Price Bros. & Co., Ltd., whose head office is at Quebec, Que., has ordered an 0-6-0 locomotive from Montreal Locomotive Works, which will have the following general dimensions, etc.:

Gauge.....	4 ft. 8½ in.
Weight on drivers.....	125,000 lb.
“ engine	125,000 lb.
“ tender	87,000 lb.
Wheel base driving.....	11 ft.
Total, engine	11 ft.
Total, engine and tender.....	41½ ft.
Cylinders	19 x 26 in.
Driving wheels	50 in.
Tender truck wheels.....	33 in.
Main journals	8 x 10 in.
Others	8 x 10 in.
Tender truck journals.....	4¼ x 8 in.
Boiler, type	Radial stay
“ pressure	180 lb.
Firebox, length	95½ in.
“ width	41¼ in.
Grate area	27.2 sq. ft.
Tubes	215-2 in.
Length of tubes	11 ft.
Heating surface, tubes.....	1230 sq. ft.
“ firebox	126 sq. ft.
“ total	1356 sq. ft.
Tractive power	28,700 lb.
Factor of adhesion.....	4.35
Tender frame.....	Steel channels
Tank capacity.....	4,200 gall.
Coal	6½ tons

Canadian National Rys. British Emigration Campaign.—The Canadian National Rys. opened the winter lecture campaign to promote emigration from England at Downham, Norfolk, Oct. 8, with a lecture by A. T. King, a Canadian farmer, who during last summer had charge of a party of settlers from England to the prairie provinces.

Another Hotel for Vancouver?—A Vancouver, B.C., press report states that arrangements have been completed for financing the construction of a large modern hotel at Seymour and Georgia Sts. there, “to serve the Canadian National Rys. needs,” and to cost between \$1,000,000 and \$1,500,000.

C.P.R. Shares Distribution.—It is stated that of the 2,600,000 shares of common stock, about 1,302,322, or 46.28%, are held in the United Kingdom; 653,534, or 25.14%, in the United States; 535,230, or 20.59%, in Canada; 76,847, or 2.95%, in France, and 131,067, or 5.04%, in other countries.

Canadian Railway Club.—G. A. Kell, Safety Engineer, Canadian National Rys., Toronto, read a paper at the club's meeting in Montreal, Oct. 9, on railway crossing accidents, their cause and prevention, which was illustrated by stereopticon views.

Freight Rate Reductions Proposed in United States.

It is reported from Washington that President Coolidge suggested to President Rea, of the Pennsylvania Rd., on Oct. 16, that U.S. railways reduce rates on export wheat, and quote the same rate on export coal as on coal for domestic use. The President is reported as being of opinion that a reduced wheat rate would be of great help to farmers, and as saying that New York and New England people are protesting that the railways are carrying coal through their states to Canadian points at lower rates than on coal consigned to them, and that, while he recognized that low export rates are based on good economic reasoning, he did not think they promoted good feeling.

It is also reported from Washington that the Interstate Commerce Commission is preparing to institute an investigation to determine the reasonableness of rates on grain and grain products in all parts of the U.S.

As indicated in the reports on the U.S. railways' earnings published in Canadian Railway and Marine World, the U.S. western roads, which would be most affected by grain rate cuts, are not obtaining earnings which hold out much prospect of them being able to grant any reductions without suffering operating deficits.

American Railway Association, Mechanical Division, Officers.

The officers for the year ending June, 1924, are as follows:—J. Purcell, Assistant to Vice President, Atchison, Topeka & Santa Fe Ry., Chicago, Chairman; T. H. Goodnow, Superintendent Car Department, Chicago & Northwestern Ry., Chicago, Vice Chairman; V. R. Hawthorne, Chicago, Secretary. The following are among the members of the various committees:—J. Coleman, General Superintendent, Car Equipment, Central Region, Canadian National Rys., Toronto, general and arbitration; H. H. Boyd, Assistant Chief Mechanical Engineer, C.P.R., Montreal, prices for labor and materials; C. E. Brooks, Chief of Motive Power, Canadian National Rys., Montreal, locomotive design and construction; J. Burns, Works Manager, C.P.R., Montreal, design of shops and engine terminals; W. Clegg, Chief Inspector, Air Brake and Car Heating Equipment, Canadian National Rys., Montreal, brakes and brake equipment; A. McCowan, Assistant General Superintendent, Car Equipment, Canadian National Rys., Winnipeg, loading rules; L. K. Silcox, General Superintendent, Motive Power, Chicago, Milwaukee & St. Paul Ry., Chicago, general and electric rolling stock; G. E. Smart, Chief of Car Equipment, Canadian National Rys., Montreal, car construction; C. H. Temple, Chief of Motive Power and Rolling Stock, C.P.R., Montreal, general.

Railway Lands Patented.—Letters patent were issued, during September, for Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, to the Canadian Northern Ry. Co. for 606.36 acres.

The C.P.R. Co. has subscribed for \$2,000,000 of the Dominion Government's Refunding Loan, 1923, 5% Bonds, not merely \$2,000, as stated erroneously in Canadian Railway and Marine World for October.

The Toronto Viaduct and Union Station Questions.

A letter signed jointly by Sir Henry W. Thornton, President, Canadian National Rys., and E. W. Beatty, President, C.P.R., was delivered to the Mayor of Toronto on Oct. 22, copies being given to the Toronto Harbor Commission's Chairman, and to the Toronto Board of Trade's Vice President, as follows:—"We have received your communication requesting a statement from the railway companies in connection with the grade separation on the water front in Toronto. Some weeks ago we announced our intention of making such a statement, and your letter affords us the opportunity of making it now. We desire to assure you that there has been no thought or desire on the part of the railway companies, parties to the agreement of 1913, to repudiate that agreement, and the responsibilities devolving upon them are acknowledged. The work has not been proceeded with owing to conditions with which the City of Toronto and all parties to the agreement have been entirely familiar. At first a delay was caused by the war, and subsequently by post-war conditions and other well known causes. The result was that an application was made to the Board of Railway Commissioners for an extension of time. Since then the Grand Trunk Co. has become merged in the Canadian National Ry. Co., and the latter company joins with the Canadian Pacific Co. in acknowledging the binding effect of the agreement of 1913, but, of course, under the altered conditions the sanction of Parliament must be obtained to any expenditure by the Canadian National Rys.

"The objects sought to be attained by the agreement were the provision of safe crossings to and from the harbor front, proper facilities to those entering and leaving the city, and the suitable development of the harbor itself. The method adopted as the most desirable at the time the matter was before the Railway Board in 1913 was track elevation, extending practically along the whole water front, but maintaining, as was necessary, existing sidings at ground level, which would in a measure perpetuate the grade crossing situation. The railway companies have recently considered whether the plan decided on in 1913, having regard to conditions now existing and in the light of subsequent investigations, is the best solution of the problem in the interests not only of the railway companies, but especially of the City of Toronto and the public generally. With no intention or thought of repudiating the responsibilities to the railway companies involved in the contract of 1913, we feel that a meeting should be held at an early date between the representatives of the parties to the agreement, at which time the railway companies would be prepared to explain the modifications which they have in mind.

"The money involved in the proposed construction is large and the contribution which the city would make to the project is considerable, consequently it would seem to be a matter of ordinary business prudence that the parties to the agreement should satisfy themselves that when a final arrangement is reached, it will represent a scheme which will not only be economical, but in the interests of the City of Toronto, together with the speedy employment of the existing union station for the purpose for which it was constructed.

"To this end, the companies have in-

structed their chief engineers to prepare plans and estimates for submission to the representatives above mentioned at a meeting which, we suggest, should be held on a date to be fixed during the week commencing Nov. 12. This will give ample opportunity for discussion prior to the time when the necessary authorization for the expenditures required must be obtained."

At a conference between the city board of control and the harbor commissioners on Oct. 23, it was decided to confer with the two railway presidents, as suggested in their letter.

The British Railways Amalgamation Tribunal.

Under the Railways' Act, passed by the Imperial Parliament, Aug. 15, 1921, the Railways' Amalgamation Tribunal was formed to settle and approve the schemes of amalgamation of the different railway units, into the four systems authorized. The board consisted of Sir Henry Babbington Smith, Chairman; Sir William Plender, an accountant, and E. J. Talbot, K.C. From its appointment until the beginning of this year, the board was occupied in hearing applications for approval of schemes covering the larger railways, and dealing with the amalgamation of smaller companies in connection with which there were no special obstacles or difficulties. With the settlement of the Caledonia Ry. case, and the completion of the London, Midland & Scottish Ry., early in the year, the greater part of the board's work was done. There remained, however, a number of cases of small companies belonging to the several groups, of a difficult and highly contentious character which have occupied its attention since. The last four groups were dealt with at the board's final public sitting, Sept. 28. In connection with two of these cases, both of which are insolvent companies, with liabilities considerably in excess of assets, in connection with which points of law are involved, a stated case is being submitted to the Court of Appeal. The Chairman was present at every meeting of the board, except the last, which was held the day before his death.

American Association of Passenger Traffic Officers.—Canadian Railway and Marine World for October, in referring to this Association's annual meeting in Montreal, said that the Canadian National Rys. ran a special train from Chicago for the members from southwestern points to Montreal, a stop of a few hours being made in Toronto, Sept. 15. We are officially advised that the Michigan Central Rd. and Canadian Pacific Ry. ran a special train from Chicago to Montreal, leaving Chicago Sept. 15, stopping over in Toronto on Sept. 16, and reaching Montreal Sept. 17. The C.P.R. also entertained the members at luncheon at the Chateau Frontenac, Quebec.

Alleged Humor from Toronto Evening Telegram: "A glorious page of history was written when Canadians captured Vimy Ridge. Surely eastern Canadians ought to be able to 'bust' the Thornton line and capture necessary coal from Alberta ridge!"

The Canadian National Rys. property assessment in Hamilton, Ont., is reported to have been fixed at \$325,000, under an agreement between the management and the city assessment department, confirmed by the county court judge.

Locomotive Crews and Long Schedule Runs Decision.

Consequent on the Canadian National Rys. management introducing mountain type passenger locomotives on the Atlantic Region, and on the management's desire to have locomotive crews operate them over two seniority districts, a dispute arose between the management and the men, the latter represented by the Brotherhood of Locomotive Engineers and the Brotherhood of Locomotive Firemen and Enginemen, which was submitted to Canadian Railway Board of Adjustment No. 1 for settlement. The joint statement given the Board was as follows:—"With introduction of mountain type locomotives assigned to passenger trains 1, 2, 3 and 4, the railway instructed enginemen to operate such power over two seniority districts, which enginemen protest against." The railways' contention as presented to the Board was as follows:—"The assignment of mountain type stoker-fed passenger engines to two subdivisions between Campbellton and Riviere du Loup, makes it desirable that enginemen be assigned to the engines and follow them. The mileage of the two subdivisions is 188, and the time is as equally distributed as possible between the Campbellton and Riviere du Loup men. By the assignment as made by the railway there is a saving in time paid to engine crews equal to 64 miles a day." The employees presented the following statement to the Board:—"Action of railway, in forcing the interchange of seniority district rights of enginemen, breaks up an established seniority district practice which has been in effect for over 30 years, and is inconsistent with railway's actions on other portions of the railway on Atlantic Region; further, the action of the railway constitutes a violation of the interpretation of the U.S. Labor Board on general order 27 and supplement thereto, in that it is in direct opposition to the rulings that past practices and customs are not to be interfered with. Further, it is contended by the employees that the action of the railways constitutes a violation of article 30 of present enginemen's schedule." The Board's decision was:—"The contention of the employees is sustained. Under the existing agreement, men should not be run off their seniority district except by mutual arrangement."

A Contractor's Security Suit.—Hugh Doheny, railway and general contractor, since deceased, brought an action in a Quebec court against C. T. Macalister to recover \$43,000 on a note payable to H. J. Lyons' order in connection with some contract. The executors were authorized by the Supreme Court to continue the suit, the hearing of which having been completed, Mr. Justice de Lorimer gave judgment in default, Oct. 4, in favor of the Doheny estate for \$43,000, with 7% interest from Nov. 20, 1920, and costs.

C.P.R. Conductor Imprisoned.—Ephraim Birk, a C.P.R. conductor, was fined \$100 and costs by the Moose Jaw, Sask., police magistrate recently, or in default, one month's imprisonment, for breaking open cases in a box car en route from Moose Jaw to Swift Current.

The Canadian National Railways have sold 30,000 sq. ft. of land, at the corner of Dalhousie and St. Andrew Streets, Quebec, to the Quebec License Commission, which will erect a large administration and storage building thereon.

Canadian Ticket Agents Association Annual Meeting, Etc.

The Canadian Ticket Agents Association held its annual outing and meeting at Montreal, Oct. 9 and 10, with an attendance of over 100. On Oct. 9, the members were given a drive round Mount Royal, and were entertained at luncheon by Canadian Pacific Steamships Ltd. on the s.s. Melita, W. Ballantyne, Steamship General Passenger Agent, C.P.R., presiding. G. H. Ham, of the C.P.R. headquarters staff, gave a brief account of the reception of the s.s. Empress of Australia in Vancouver on arriving there after the earthquake in Japan. In the afternoon a number of the members were taken round the harbor on the harbor commissioners' yacht, and the whole party was entertained at a theatre in the evening.

The business meeting was held at the Mount Royal Hotel on Oct. 10, President McDonald, Valleyfield, Que., being in the chair. A number of questions were discussed, the principal one being as to the best way to appeal to railway passenger officials for the restoration of transportation privileges, which had been granted for 25 years, for the wives, et al, of members who are ticket agents on a commission basis, and which were withdrawn in 1919 on the passing of the Railway Act. A committee was appointed to wait on the railway officials in this connection. A number of representatives of Canadian and U.S. railways and steamship companies were present, and several of them spoke. The following officers were elected:—President, C. L. Von Gunten, Canadian National, Blenheim, Ont.; 1st Vice President, G. Sutherland, Canadian Pacific, Ingersoll, Ont.; 2nd Vice President, J. L. Boyes, Canadian National, Napanee, Ont.; 3rd Vice President, W. W. Porte, Canadian Pacific, Brighton, Ont.; Secretary-Treasurer, E. de la Hooke, London, Ont.; Auditor, J. S. Giles, Canadian Pacific, Lachute, Que.; executive committee, W. Jackson, Canadian Pacific, Clinton, Ont.; A. M. Hare, Canadian National, Tillsonburg, Ont.; C. B. Janes, Canadian Pacific, Orillia, Ont.; W. H. C. MacKay, Canadian Pacific, St. John, N.B.; E. R. Blow, Canadian Pacific, Whitby, Ont.; Honorary Physician, Dr. J. W. Shaw, Clinton, Ont.

The total number of harvesters brought from Great Britain to Canada this year was 11,718, and up to the end of September, only 347 had booked passages back to England. It was stated on Oct. 18, by the Minister of Colonization, Mr. Robb, that winter positions had been found for about 8,000.

Timiskaming & Northern Ontario Ry. Fire Insurance.—The Commission will receive tenders, to Nov. 1, to provide rate or rates for fire insurance on the whole or portion of its property for one year and three years, respectively, from Dec. 1.

Alaska Railroad Damaged.—A Washington, D.C., press report says that a telegram from Anchorage states that about 100 miles of the line have been put out of service, an unusually heavy rain, and high tides, having greatly damaged the section between Seward and Potter, destroying bridges, etc.

British Columbia Lumber for Railway Use.—The B.C. Minister of Lands is reported to have stated recently that the Canadian National Rys. had ordered several cars of B.C. clear edge-grain cedar for passenger car siding, and are also using B.C. cottonwood veneer plywood for ceilings in passenger cars.

Grain Shipments to Vancouver Embargoed Temporarily.

We are officially advised that the C.P.R. placed a temporary embargo, on Oct. 11, on grain consigned to Vancouver, B.C., because of a longshoremen's strike which began Oct. 9. D. C. Coleman, Vice President, Western Lines, C.P.R., made the following statement:—"The suspension restrictions will be enforced until it is established loadings can be freely made from elevators to steamships. There is sufficient grain in the elevators, and in transit, to provide cargoes for all ships in port or in sight. Just as soon as it is established that inbound shipments can be taken care of without danger of congestion and delay of equipment, shipments will be resumed."

The strike was started by longshoremen at Vancouver and other Pacific coast points, including lumber loading points in the Fraser River area, to enforce demands for 90c an hour and \$1.35 for overtime, instead of the 80c and \$1.25 rates being paid. They also demanded 5c an hour bonus for handling lumber, and that all checkers employed belong to their union. The Shipping Federation, representing their employers, stated that higher wages could not be afforded, and decided to fight the strike, which has apparently been done with success, as the last reports are that new men have been employed and that ships are loading and discharging cargo as usual. Although we have no official advice that the embargo has been lifted, it is reported that Mr. Coleman assured interested parties that the C.P.R. would keep grain moving forward to Vancouver as fast as there were ships to take it away, and it is likely that the export grain flow through Vancouver will not be seriously interrupted.

Since the foregoing was put in type, a Winnipeg press dispatch of Oct. 20 states that E. D. Cotterell, Transportation Assistant, C.P.R., had announced that the embargo had been removed and that despite the longshoremen's strike, loading and shipments were being well maintained.

We were officially advised, Oct. 16, that the Canadian National Rys. had not then found it necessary to suspend grain shipments from the prairie provinces to Vancouver.

Michigan Central Rd. Employees Instruction Concerning Freight Loss and Damage.—We are officially advised that agents, yardmen, locomotive men, trainmen and freight house forces on the Michigan Central Rd.'s Canadian Division are receiving instruction, in which motion pictures play an important part, in the handling of freight equipment and lading in such a way as to reduce freight damage, overages and shortages to a minimum. The pictures are exhibited by a New York Central Lines representative, who is handling this work on N.Y.C. lines and those of subsidiary companies. On the M.C.R.'s Canadian Division, meetings are held every 60 days, and all cases of damage, overage and shortage on the home and connecting roads are gone into thoroughly, and instruction is given as to how to avoid similar cases in future. The activities of the "over, short, and damage committees" on the M.C.R. and other roads, in recent years, have resulted in material reductions in the losses from lost and damaged freight. It is felt that the introduction of motion pictures into the instruction will increase its value to the employees.

Telegraph and Cable Matters.

Thos. Rodger, Montreal; C. E. Davies and E. Kenward, Toronto, attended the recent annual meeting of the American Railway Association's Telegraph and Telephone Section, held at Colorado Springs, Colo.

G. W. Bancroft, local agent, C.P.R. telegraphs, Montreal, was presented recently by J. McMillan, General Manager of Telegraphs, C.P.R., on behalf of the staff, with a silver tea service on the occasion of his marriage to Miss Lillian Wyatt at Elmira, Ont.

R. C. Kennedy, of the Pacific Cable station at Banfield, Vancouver Island, was married in Christ Church Cathedral, Victoria, B.C., Oct. 5, to Miss Winnifred Winton-Ingram, the Bishop of Columbia officiating. The bride is a cousin of the Bishop of London, Eng.

The Postal Telegraph and Commercial Cable Co. landed one end of its new Atlantic cable at Far Rockaway, N.Y., early in August, and continued laying the cable toward Canso, N.S. Early in September, after having laid a considerable section, it was stated that owing to a slight accident, the end had been dropped, and the cable lost. After two days' search for the lost end, it was decided to abandon it temporarily, and proceed to Canso, N.S., to commence laying cable from that end, and return later to the vicinity of the lost cable, to grapple for the end.

The Commercial Telegraphers' Union held its annual meeting at Montreal, Oct. 1 to 5, and passed a resolution favoring the holding of a celebration on the nearest Sunday to April 27 in each year, in memory of S. F. B. Morse, inventor of the Morse code. Another resolution was passed calling upon various public bodies "to use their influence to help emancipate the commercial telegraphers of the United States and Canada from the tyranny of the great telegraph corporations, who deny to those engaged in the business of communication the right to exercise full and free citizenship."

In dealing with complaints regarding the cable service between Canada and the West Indies, at the recent conference of premiers in London, Eng., the Duke of Devonshire stated that there had been placed before the Canadian and West Indies Governments recently, a scheme for an all-British cable from Turks Island to Barbados, with subsidiary connections by cable and radiotelegraphy to other colonies, based on the continued co-operation of the British and Dominion and colonial governments; that it had been accepted in principle by all the governments concerned, and that it is hoped to carry it out during 1924.

W. C. Burton, Postmaster of Brooklyn, N.Y., who died there, Sept. 3, was born Oct. 7, 1864, at Carlyle, Wentworth County, Ont., and in 1876 entered Dominion Telegraph Co.'s service at Dundas, Ont., as messenger, later becoming operator and manager there. On the consolidation of the Dominion Telegraph Co. and the Montreal Telegraph Co., and the formation of the Great North Western Telegraph Co., in 1881, he was removed to Buffalo, N.Y., and shortly after transferred to the Western Union Telegraph Co. there. He became a state senator in 1902, served as such during the two following years, and was appointed Postmaster of Brooklyn in 1916, and again in 1920.

Cable reports of the Imperial Confer-

ence at London, Eng., Oct. 17, state that the British Postmaster-General criticized some of the Dominion Government's Departments for not using the Imperial cable operated between Halifax, N.S., and London. Hon. G. P. Graham, Minister of Railways, is reported to have replied that, while willing to do anything possible to assist the Imperial cable, that the Canadian National Telegraphs system is being operated as a business proposition. The Government is prepared to have an interchange of traffic, but it could not be expected that the Canadian National Telegraphs would hand its business over to the Imperial cable solely as a matter of sentiment and without receiving traffic in return.

The Canadian representatives on the American Railway Association Telegraph and Telephone Section committees, appointed at the recent meeting to carry on the work for the current year, are:—Committee of direction: C. E. Davis, General Traffic Superintendent, Canadian National Telegraphs, Toronto. Construction and maintenance, outside plant: E. Kenward, Superintendent of Railway Service, Canadian National Rys., Toronto; J. B. McGregor, Assistant Superintendent of Telegraphs, Canadian National Rys., Battle Creek, Mich. Construction and maintenance, inside plant: Vice Chairman, C. E. Davis. Education and training of telegraph and telephone employees: Vice Chairman, W. E. Bell, Assistant to Superintendent of Telegraphs and Telephones, Canadian National Rys., Montreal. Radio and wire carrier systems: E. Kenward.

Hearing on Express Rates Increase Application.

A hearing on the Express Traffic Association of Canada's application for increases in express rates was held in Ottawa by the Board of Railway Commissioners on Oct. 4. The Association was represented by F. H. Phippen, K.C., General Counsel, and C. N. Ham, Chairman; the Canadian National Rys. Express Department by C. A. Hayes, General Manager; W. C. Muir, Assistant General Manager; T. Waterson, Solicitor; J. G. Swallow, Assistant General Auditor, and J. H. Moore, Superintendent of Equipment and Supplies, and the Dominion Express Co. by T. E. McDonnell, Vice President and General Manager, and W. H. Burr, Traffic Manager. E. P. Mallory, Director, Bureau of Statistics, Canadian National Rys., and E. E. Lloyd, Assistant Comptroller, C.P.R., were also present, to explain statistics as to car mile costs, etc., and numerous boards of trade, trade associations and individual firms were also represented.

F. H. Phippen, K.C., stated that the express companies are operating at an actual out-of-pocket loss, and explained that when the Board last granted them an increase in rates, they had not been given all they asked for. If they had been, they would now be earning a fair return, but no more. He showed, by reference to figures submitted, that the Dominion Express Co. is more nearly paying its way than the Canadian National Rys. Express Department, and said that if the Dominion Express Co.'s requirements were to be the guiding factor, a straight increase of about 4½% would meet the demands of the situation, but that if the Canadian National Rys. Express Department's needs were to be considered, a greater increase would be necessary.

Following an examination of Messrs.

Mallory and Lloyd, by the Chief Commissioner and other members of the Board, as to how express car mile operating costs had been determined on both the Canadian National Rys. and C.P.R., T. Marshall, Manager Traffic Department, Toronto Board of Trade, asked if, as the figures submitted showed that the railways are not receiving cost of service, from the express companies, the express companies intend to increase their payments to the railways. Mr. Phippen replied that such was not intended, and that the application was made on the basis of the railways continuing to receive the same rates as they have been getting for handling express matter. Mr. Phippen stated that he was quite aware of the opinion held by many people that the express companies, as railway subsidiaries, are paying the railways too much, and that he considered it his duty to inform the Board as to what the railways' costs for handling express traffic are.

One statement submitted showed that it cost the Canadian National Rys. 43.93c a car mile to handle express business in 1922, and another showed that it cost the C.P.R. 38.32c. In 1922 it cost the Canadian National Rys. \$10,022,995 to handle 22,815,831 car miles of express traffic at 43.93c a car mile. Express department costs were \$6,513,655, making a total cost of \$16,536,650. Express revenue was \$13,085,941, making the deficit from express operation \$3,450,709 for the year. In 1922 it cost the C.P.R. \$6,753,493 to handle 17,396,943 car miles of express traffic at 38.32c a car mile. Dominion Express Co. costs were \$7,433,671; figuring in a reasonable return on express company property, total costs were \$14,664,705; and gross revenue was \$13,676,420, which means that there would have been a loss of \$988,284 on the year's business if the C.P.R. had been paid by the express company at 38.32c a car mile. In line with Mr. Phippen's statement that the increases sought were not based on any idea of the Dominion Express Co. paying the C.P.R. more, another statement was submitted showing that, with present payments to the C.P.R., the express company should have had, in 1922, \$637,549 more revenue than it had, to meet all expenses and pay a reasonable return on value of its property. This showed that the express company has not been paying the C.P.R. the cost of furnishing the service.

Viewing the Dominion Express Co.'s requirements as the governing factor, three suggestions were submitted to the Board as to how they could be met. These were: 1. A straight 5% increase on all traffic, which would increase revenues by \$661,430 annually, on basis of 1922 results. 2. No change in 1st class rate, 2nd class rate made 80% of 1st class, and commodity rates, except that on cream, advanced 22%. This would increase revenues by \$643,917 annually. 3. 1st class rates per 100 lb. made 2½ times average freight rate, averaged in 50-mile groups, preserving existing minimum rates; 2nd class rates made 80% of 1st class, and commodity rates, other than on cream, increased 10%. This would increase yearly revenues by \$666,156. The proposition of co-relating express rates with standard freight rates has been favorably considered by the Board in the past, but never adopted. It is regarded favorably by the express companies.

The proceedings on Oct. 4 were restricted to hearing the express companies' representatives and explanation of fig-

ures submitted. The testimony has been printed and circulated throughout the country, and hearings by the Board at important points will follow. The final argument will likely be heard in Ottawa.

Among the Express Companies.

A. J. Courtice, agent, Express Department, Canadian National Rys., Brockville, Ont., died there suddenly, Oct. 3, aged 50.

R. C. Mellish, heretofore travelling agent, Express Department, Canadian National Rys., Stratford, Ont., has been appointed travelling agent, London, Ont., vice B. S. Murray, retired on pension fund.

Canadian National Rys. Express Department has closed the following offices: East Selkirk, St. Norbert and Scanterbury, Man.; Alberta Beach, Alta. The name of the office at Otter Lake, Ont., has been changed to Holmur.

The National Dairy Council of Canada applied to the Board of Railway Commissioners for an order requiring that ice cream mix, and bulk evaporated milk, be carried by express under commodity cream tariffs. The matter was heard by the Board at Ottawa, April 17, and an order was issued Oct. 5, refusing the application.

Benjamin S. Murray, travelling agent, Express Department, Canadian National Rys., London, Ont., retired on the pension fund, at the end of September, after having spent practically his whole business life in express service. He was presented with \$200 and an illuminated address by the local staff.

The Canadian National Rys. have put up a temporary building on Richmond St., Montreal, for handling fruit by its Express Department, which has been done heretofore at Point St. Charles. The building is 320 x 30 ft., and 16 ft. high, and is approached by 2 new tracks approximately 1,000 ft. long.

The Board of Railway Commissioners has dismissed the complaint of L. Perrin & Co., of Vancouver, B.C., with regard to express rates on crabs, in ice, from Vancouver to Fort William, Toronto and Hamilton, Ont. The complainants claimed that crabs should take the same special rates as fish. A summary of the judgment is given under "Traffic Orders by the Board of Railway Commissioners," on an earlier page of this issue.

Complaints by Plunkett & Savage of Calgary, Alta., and Scott National Ltd. of Medicine Hat, Alta., with regard to express rates on fresh vegetables from points of production in Alberta and British Columbia, were heard by the Board of Railway Commissioners at Calgary, July 10, and the Board passed an order Oct. 5, dismissing the complaints. The order, and summary of the judgment, are published under "Traffic Orders by Board of Railway Commissioners" on an earlier page of this issue.

The Canadian National Rys. Express Department applied to the Supreme Court of Ontario, Oct. 8, to be relieved of two packets of money, one of \$7,000 and the other of \$375, consigned to the Home Bank by Fidelity Trust Co., Buffalo, N.Y. The money was shipped just prior to the bank's suspension of payment, and was in the company's hands when payment was stopped. It was ordered that the money be paid into court, after the company's charges of 50c and the costs of the application, fixed at \$30, had been deducted, until the trial of the Fidelity Trust Co.'s action to determine the ownership.

Electric Railway Department

Canadian Electric Railway Association Meeting at Atlantic City.

Officials of several electric railways which are members of the Canadian Electric Railway Association, and some representatives of associate members, who attended the American Electric Railway Association's annual meeting at Atlantic City, held a meeting there on Oct. 10, at which, in the absence of both the President, H. H. Couzens, General Manager, Toronto Transportation Commission, who had not then returned from England, and the Vice President, D. E. Blair, Superintendent of Rolling Stock, Montreal Tramways Co., who was unable to attend, the past President, Major F. D. Burpee, Manager, Ottawa Electric Ry., presided. After several routine matters had been dealt with, Major Burpee invited the Association to hold its next annual meeting in Ottawa, and it was decided to recommend to the executive committee that the invitation be accepted. It was decided to hold a general meeting of the Association each year during, and at the same place as, the American Electric Railway Association's annual meeting. The Association's Secretary will act each year as the Association's representative on the American Electric Railway Association's committee on co-operation for state and sectional associations.

The question of motor bus and truck competition was brought up by Major Burpee, who said that the committee on this matter had collected considerable data and would meet at an early date. Through the instrumentality of H. E. Weyman, Manager, Levis County Ry., C. D. Cass, General Manager, Waterloo, Cedar Falls & Northern Ry., Waterloo, Iowa, who is chairman, American Electric Railway Association committee on uniform motor vehicle regulatory laws, addressed the meeting, saying that he would be very glad indeed to be of any help to the Association or its member companies in this matter. As chairman of the committee which handled the subject for the A.E.R.A., both last year and this year, he felt that possibly he was in a position to mention the various points with which Canadian electric railways would have to contend in getting legislation dealing with motor bus operation. His committee had drafted what he considered an ideal act, and that if such could be adopted, without any changes, in Canada, motor buses would be under proper legislation. An act passed last winter in Ohio was modelled after the one drawn up by his committee. A few of the things with which his committee had to contend in dealing with the Ohio Government were cited. Great hesitation on behalf of the farmers in assenting to the adoption of the act was one of the first things with which they had to contend. Another point to which exception was taken was the provision in sec. 4 that it is unlawful for any motor carrier to operate or furnish service within the state without first having obtained from the Railroad Commission a certificate declaring that public convenience and necessity require such operation. In Ohio the word "necessity" was omitted after considerable discussion, but, with this exception, the act had practically been passed intact. He mentioned that it was of considerable importance not to have the word "necessity" omitted,

as certain public commissions might not take the same meaning from the word "convenience" as was desirable from the standpoint of railway companies. He strongly advocated the passing of legislation to compel all motor bus companies and owners to forward a return to the government outlining their financial position, or a statement similar to that now furnished by railway companies. The act drafted by his committee provides for certain records being forwarded to the commission under whose jurisdiction the buses will operate. He felt, however,

in relation to the damage done to pavements, but so far, no way has been determined whereby this could be put into effect; the principle, however, is, he considered, sound. He pointed out that the basic principle of the act as drawn up by his committee is the ton-mile tax, the rate being changed to suit conditions. The theory that the ton mile basis is not sound is, he said, incorrect, as it can be adopted very easily. He felt that the board which regulates the operation of buses must regulate regularity of schedule. If short haul business is taken from the railways, then fares must be increased to meet the conditions which will be bound to develop. He then mentioned the conditions existing in California, where \$50,000,000 has been spent on roads, 80% of which are now worn out, and the bonds have not yet been retired. He thought the taxpayer should be protected, and he did not see any reason why the taxpayer should pay for the construction and maintenance of roads to be used for making money for others who were in all probability living outside the district.

J. P. Hudson, Montreal & Southern Counties Ry., and H. E. Weyman, Levis County Ry., outlined conditions in the Province of Quebec, and mentioned what has been done. Mr. Weyman said that the Quebec Government is contemplating passing an act to regulate the operation of motor buses, and he felt that Mr. Cass' address would be of great value to them in assisting the Government in drafting a bill. He added that a meeting will be held shortly in Montreal to go into the question of drawing a bill, at which there would be representatives of the Quebec Government, the steam and electric roads interested, Canadian Electric Railway Association, and the Canadian Railway Association. It was decided that D. E. Blair, Superintendent of Rolling Stock, Montreal Tramways Co., represent the C.E.R.A. at the meeting, and Major Burpee suggested that I. S. Fairty, Solicitor, Toronto Transportation Commission, be added to the motor truck and bus committee.

London Street Railway Purchase Negotiations.

The negotiations which have been in progress for some time between Sir Adam Beck, acting for London City Council, and the London Street Ry. Co., to fix a price at which the company's property could be bought by the city, were reported on Oct. 15 to be nearing completion, and it was said that R. G. Ivey, Vice President of the company would meet Sir Adam in connection with the matter. It is said that a price, somewhat under \$1,000,000, has been suggested by Sir Adam, that the company claims it has expended \$300,000 on the property since the Bunnell valuation was made, and that there is a comparatively small difference between the total figures mentioned by the two parties.

The Montreal Tramways Co. has ordered 2 self-contained travelling grate stokers, for use in conjunction with two 12,000 h.p. Babcock & Wilcox boilers.

Canadian Electric Railway Association.

Honorary President: Major General Sir John M. Gibson, K.C.M.G., M.A., LL.B., LL.D., K.C., director, Dominion Power & Transmission Co.

Honorary Vice President: Acton Burrows, Proprietor, Canadian Railway and Marine World.

Honorary Advisory Council: Thos. Ahearn, President, Ottawa Electric Ry.; F. A. Gaby, Chief Engineer, Hydro Electric Power Commission of Ontario; Lt. Col. J. E. Hutcheson, General Manager, Montreal Tramways Co.; Geo. Kidd, President, British Columbia Electric Ry.

President: H. H. Couzens, General Manager, Toronto Transportation Commission.

Vice President: D. E. Blair, Superintendent of Rolling Stock, Montreal Tramways Co.

Treasurer: E. P. Coleman, General Manager, Dominion Power & Transmission Co.

Executive Committee: The President, the Vice President, the immediate Past President (Major F. D. Burpee, Manager and director, Ottawa Electric Ry.), the Treasurer, and G. Gordon Gale, Vice President and General Manager, Hill Electric Co.; W. S. Hart, Treasurer, Quebec Railway, Light, Heat & Power Co., and Vice President, Three Rivers Traction Co.; D. W. Houston, Superintendent, Regina Municipal Ry.; C. B. King, Manager, London Street Ry.; M. W. Kirkwood, General Manager, Grand River Ry. and Lake Erie & Northern Ry.; H. K. McLean, Superintendent of Transportation, New Brunswick Power Co.; A. W. McLimont, Vice President and General Manager, Winnipeg Electric Ry.; W. R. Robertson, General Superintendent of Railways, Hydro Electric Power Commission of Ontario; H. E. Weyman, Manager, Levis County Ry.; C. L. Wilson, Superintendent, Hydro Electric Ry., Toronto & York District.

Auditor: Lt. Col. G. C. Royce.

Secretary: Eustace Smith, Jr., Executive Assistant, Toronto Transportation Commission, 35 Yonge St., Toronto.

Official Organ: Canadian Railway and Marine World, Toronto.

that were all motor bus companies and owners required to put a proper accounting system into effect, a large majority would soon find that they were operating at a deficit. He cited certain instances of this, where a man buys a bus, operates it, and say, takes in \$15 a day; his expenses for gas, oil, etc., being \$10, he then considers that he has a net profit of \$5. Of course, this is not the case, as nothing has been allowed for depreciation and other charges, which would be looked after properly were an authorized system of accounting adopted. He thought that power should be lodged in the regulating body to set up a system of accounting for the use of motor bus companies to provide adequate depreciation systems. He considered the principle of the ton-mile tax sound, and that it should be used wherever possible. He felt, however, that a tax should be levied

Car Conversion, Toronto Transportation Commission.

Among the equipment taken over from the Toronto Railway Co. by the City of Toronto for operation by the Toronto Transportation Commission were a number of double truck cars arranged for the entry of passengers by the rear door, the fare being paid on entry, and with exit at either front or rear—the commonly accepted standard type of p.a.y.e. cars. The new cars obtained by the Commission, all of which have been described in Canadian Railway and Marine World, were designed with the entrance door at the front, and the exit at the side, near the center of the car, with the exception

mission to decide to convert the majority of the 350 p.a.y.e. cars into front entrance and rear exit cars like the one illustrated. The remaining cars will be used for making a number of 2-car trains, one of which is now being experimented with. The trains will be permanently connected, the front car to retain 4 motors and the rear 2, these to drive through the leading truck. Of the cars to be converted for front entrance operation, some will be equipped with line switches, and also with automatic couplers, so that trailers may be drawn. The number of cars to be converted into cars similar to the one de-

best advantage. The experiments with the converted car illustrated herewith have demonstrated that, in addition to the increased capacity, large savings in loading and unloading time are accomplished with the front entrance and rear exit as compared with the original arrangement. At the time of writing (Oct. 20), 45 p.a.y.e. cars have been converted into front entrance rear exit cars, and work on further conversions is proceeding.

Ontario Hydro Electric Railways, Toronto & York District, Work.

Metropolitan Division.—The following works have been completed recently on the Metropolitan Division: Construction of passing sidings at miles 0.66, 6.29, 6.98, 8.97 and 12.3 north of Toronto. These sidings are each 700 ft. long and the turnouts are equipped with no. 9 frogs. The work was done by railway forces. Installation of about 6 miles of additional c.m. cable between Thornhill, mile 6.73 north of Toronto, and Bond Lake, mile 13.96 north of Toronto, to improve voltage regulation on the trolley line. Construction of temporary sidings for contractors on provincial highway work between Thornhill and Bond Lake. Construction of a substation 2½ miles south of Jackson's Point, mile 47.38 north of Toronto. Installation of Nachod block signal system between Toronto and mile 4.78 north. Full details of this signal installation were given in Canadian Railway and Marine World for September.

Mimico Division Terminal Station.—As stated in Canadian Railway and Marine World for October, the Ontario Hydro Electric Railways will build a terminal station at the Toronto terminus

Converted Car, Toronto Transportation Commission.

of the trailers, in which entrance and exit doors are adjacent to one another, at the center of the car.

In order to obtain uniformity in operation of the motor cars, and at the same time to obtain an increase in the seating capacity of the old cars, the Commission has had one of the p.a.y.e. cars taken over from the Toronto Railway Co. converted into a car with entrance at the front, the converted car being shown in the accompanying illustration. The door arrangement is shown in fig. 1, the exterior view; fig. 2, shows the interior of the converted car, looking toward the rear. In addition to the door alterations, the rear vestibule floor was elevated to the level of the floor in the car body, an extra step at the rear door compensating for the change in floor elevation. The conductor's position is shown in the illustration. The longitudinal seat was extended, around the rear vestibule, to the door opening, and a railing was erected to the right. Passengers who have paid their fare occupy the seat in the rear vestibule, and the side of the car opposite the conductor as far ahead as the railing; passengers occupying seats in front of this pay their fare as they leave the car. The seating capacity was increased by the change from 36 to 43.

The conversion was undertaken by the Commission in the way of an experiment, with the idea in view of altering the majority of the 350 cars of this class taken over from the Toronto Railway Co., if the converted car was found satisfactory in operation. The car was placed in operation on the College St. route on April 12, and has been in that service since, with the exception of a couple of days when it was on exhibit at the Canadian Electric Railway Association annual meeting, and soon after it began operation it became evident that it was a much better transportation medium in its converted form than it was originally. The success met with influenced the Com-

mission to decide to convert the majority of the 350 p.a.y.e. cars into front entrance and rear exit cars like the one illustrated. The remaining cars will be used for making a number of 2-car trains, one of which is now being experimented with. The trains will be permanently connected, the front car to retain 4 motors and the rear 2, these to drive through the leading truck. Of the cars to be converted for front entrance operation, some will be equipped with line switches, and also with automatic couplers, so that trailers may be drawn. The number of cars to be converted into cars similar to the one de-

Converted Car, Toronto Transportation Commission.

of control and door opening mechanism to determine which will be the most suitable for the 2-car trains.

The decision to convert the p.a.y.e. cars was arrived at because the Commission has 350 new steel motor cars with front entrance and side exit, and 225 new steel trailers, and with present schedules and distribution of cars to routes, it is not possible to work in p.a.y.e. cars to the

of the Mimico Division, which extends from Toronto to Port Credit, 8.36 miles. The station will be adjacent to the loop at the western terminus of the Toronto Transportation Commission's Lake Shore Road line, near the Humber River and Jane St., and just south of the Toronto-Hamilton highway. The station will be of frame, 30 x 50 ft., and one story high. It will be divided as follows: general

waiting room, 30 x 38 ft., in center of building; offices for Division Superintendent and staff, separated from each other and from general waiting room by wood partitions, in east end of building; waiting room for local line passengers and one for through passengers, separated from each other and from general waiting room by lattice work partitions, in west end of building. Gates will open from the general waiting room into the two waiting rooms last mentioned. Passengers will pay their fares on passing through these gates; when cars arrive and discharge their passengers, the outgoing passengers who have paid their fares at the gates inside the station will pass through doors at the west side of the station and board the cars. The station will be served by two tracks. The north one will be through, movements thereon east of the station being confined, however, to cars going to, or coming from, the Mimico Division shops, which are a short distance east of the station's location. The south track, a spur off the north track, will come to a dead end just west of the station. Between the two tracks, and south of the south track, west of the station, will be 2 concrete platforms, 120 ft. long and 8 ft. wide, covered by timber umbrella shelters, with Spanish tile roofing. Outgoing passengers who have paid their fares in the station will not be allowed through the doors at the west side of it, to board the cars, until the incoming passengers are clear of the platforms. The station and platforms will be surrounded by a high picket fence, in colonial style, arranged so that all possibility of people getting through to board cars without paying their fares will be obviated. The station will be built on reclaimed land owned by the Toronto Harbor Commission, which will charge the railway management a rental of \$1 a year. Approval of the plans was given by the Harbor Commission and Toronto city authorities early in October. Construction will be by contract and under the supervision of C. L. Wilson, Assistant Manager, Toronto and York District, Ontario Hydro Electric Railways.

Mimico Division Power Station.—A power station is being built at mile 6 from Toronto, on the Mimico Division. It will be 16 x 32 ft., of galvanized iron, and will house a 500 k.w. rotary converter, and transformers and switching apparatus, to take a.c. current from the Hydro Electric Power Commission of Ontario's feeder line, and turn out d.c. current for railway use. It will supply power to the part of the Mimico Division west of New Toronto, mile 3.5 from Toronto. With the better power conditions which will follow the cutting in of this station, a faster service will be given and schedules will be maintained. Construction of the building and installation of the equipment is being done by railway forces, and it is expected that it will be in operation by Dec. 1.

Referring to the order for 10 one-man cars recently given by Quebec Ry., Light & Power Co. to the Ottawa Car Manufacturing Co., which were described in Canadian Railway and Marine World for October, we are officially advised that the railway has decided to change them from double end to single end cars.

Quebec Ry., Light & Power Co. has bought 10 double end single truck cars, 28½ ft. long, with seating capacity for 32 passengers, from Eastern Massachusetts Ry., which were built by J. G. Brill Co. in 1920.

Toronto Transportation Commission's Two-Car Trains.

A preliminary description of a 2-car train which the Toronto Transportation Commission is experimenting with was given in Canadian Railway and Marine World for August, pg. 402. An illustration of the train is given herewith. This equipment is not operated as a motor car and trailer, but consists of 2 motorized units coupled together, and operated from controls in the leading car. The arrangement is similar to that of the 2-car units operated by Montreal Tramways Co. Both cars are of the p.a.y.e. type. The leading car's seating capacity is unchanged, remaining at 37, there being longitudinal seats on each side accommodating 18 passengers, and one seat in the front vestibule when the heating stove is out. The seating capacity of the rear car, however was increased from 37 to 50, by removing part of the longitudinal seat on the door side, and replacing it by transverse seats accommodating 12 passengers, the remaining part of the longitudinal seat accommodating 8 passengers, and by carrying the longitudinal seat on the devil-strip side around the rear vestibule, providing accommodation for 30 passengers. Both cars are 44 ft. 5 in. long, and are connected by Tomlinson automatic couplers of the type used between the Commission's new motor cars

two motors were left on the second car, these driving through the leading trucks. A K6 controller, altered somewhat to permit of control of the two cars, is used on the leading car, and the wires between the cars are carried in a hose jumper. The operation of motors and air brakes on both cars is controlled by the motorman on the leading unit, and, while the cars are in regular service, power is collected through the trolley pole on the leading car, the pole on the second car being down. The second car is, however, equipped so as to be able to operate as an independent unit, under its own power, in yards, shops, etc. Operation of the folding doors on both cars is interlocked with the controller on the first car, as on the Commission's new motor cars and trailers. The automatic feature of the brake system ensures prompt automatic application of the brakes on each unit in case of a break-in-two.

As stated in our August issue, this 2-car train was made of cars taken over from the Toronto Railway Co., and the Commission is testing it thoroughly before deciding how many of such trains it will place in service. This decision will determine how many of the 350 p.a.y.e. cars on hand will be converted into pay as you leave cars, and how

Two-Car Train, Toronto Transportation Commission.

and trailers, ensuring absence of jolting in operation. The door arrangement of both units is such that passengers enter the leading car by the left half of the rear folding door, and leave by the right half, and also by the sliding door in the front vestibule, while they enter the second car by the right half of the folding double door at the front vestibule, and leave it by the left half of that door. All doors have "Entrance" or "Exit" painted over them. The conductor of the leading car is located in the rear vestibule, as when the car operated as a single unit in p.a.y.e. service, and the conductor of the second car is stationed in the front vestibule, facing the doors. A curved railing from the center of the door opening deflects the stream of entering passengers past the conductor's farebox.

The second car has an emergency door at the rear, on the same side as the front doors. Normally, a part of the longitudinal seat blocks this door, which is held closed by a pin, operated by air pressure, and a spring latch attached to the seat. In case of emergency, the conductor on either car, or the motorman on the leading car, can release the pin which holds the door. By lifting the section of seat in front of the door the spring latch is released, and the passengers may then leave by the emergency door.

The complete motor equipment has been left on the leading car, but only

many into 2-car trains. The present train was first placed in operation on the Bathurst St. run, but at the time of writing (Oct. 20), is on the Avenue Road run.

Toronto Suburban Railway City Lines Purchase Negotiations.

Canadian Railway and Marine World for October gave particulars of the draft agreement providing for the acquisition of the Toronto Suburban Ry.'s lines in Toronto by the city, and it was then expected that the agreement would be signed very soon. Since then, several obstacles have cropped up, and the outlook now is that no arrangement for the disposal of the railway's city lines, and those to Weston and Lambton, northwest and west of the city, respectively, will be arrived at for some time. There are four parties concerned—the Canadian National Rys., which operates Toronto Suburban Ry., the City of Toronto, York Township, and the Toronto Transportation Commission. One of the matters in dispute is the provision of a subway where the Toronto Suburban line crosses Weston Road; the draft agreement provided that the city raise the grade of the road at that point, and that the railway provide the subway. While the draft agreement provided for acquisition by the city of the Lambton section, which extends along Dundas St. from the west city limits west to and including the loop at Lambton, 1.34 miles, and while

The Toronto Transportation Commission's Activities.

it was understood that the township would reimburse the city for the purchase of this line and its rehabilitation, the present proposal is that the township buy this portion of the line, and arrange for its operation by the Toronto Transportation Commission. It is stated that Weston Town Council is considering the possibility of buying the portion of the Toronto Suburban line in Weston, and that York Township is further considering the possibility of buying the section of the line from Toronto's north city limits to Weston's south boundary. A meeting was held on Oct. 16 between York Township Council members and Toronto Transportation Commission representatives, but practically no progress was made, beyond the township representatives stating that before the township could take any action at all in the matter, the people would have to be given an opportunity to vote on it. Altogether, it appears that considerable delay is going to be experienced before the matter is satisfactorily disposed of, and that the Toronto Suburban lines within the city and immediately adjacent thereto will not be under Toronto Transportation Commission control for some time. It may be added that the impression prevails that Toronto's mayor, who wanted the city to take over all the Toronto Suburban's lines, including the one from Lambton to Guelph, is not endeavoring to expedite a settlement.

Hamilton St. Ry. Tickets Forged.

The Hamilton Street Ry. has for some time past been the victim of forged tickets dropped into the fare boxes by passengers. As the result of an investigation, W. A. Walton, a former employe in the company's office, and Geo. Beckerson, also formerly in the company's service, were arrested Sept. 25, charged with forging tickets, and on the following day were remanded for eight days, being allowed out on bail of \$5,000 each. The men, who had been under suspicion, were seen to drive up to a house in the east end of Hamilton in a motor car, and on getting out, Walton sold a number of sheets of tickets at 50c each, to a police agent, the marked money and 27 additional sheets of tickets being found on him subsequently, while 10 sheets of tickets were found on Beckerson, and another 100 sheets were found in the car. The men were placed under arrest, and when searched at the police station, evidence was found showing that they were concerned in an extensive business of printing and circulating forged street car tickets. A search of Beckerson's house resulted in the discovery of 1,800 sheets of tickets in a parcel hidden in a clothes closet. Each sheet contained 20 tickets, which were, as stated above, sold at 50 cents a sheet, while the company sells 5 tickets for 25c. The tickets were apparently printed in Detroit, the printer there securing for the accused men machines for numbering the tickets at a cost of \$190. The contract with the printer was stated to call for 10,000 sheets of tickets at a cost of \$125, receipts for these two amounts being among the papers found. The Detroit police were informed, and searched the Capitol Printing Co.'s premises, where they were given the plates used in printing the tickets and about 8,000 sheets of printed tickets. It is stated that Walton represented himself as an officer of the Hamilton Street Ry., and that he gave an order for 50,000 sheets of tickets. The two men were committed for trial.

Parliament St. Track Extension.—As stated in a preceding issue, residents on and near Parliament St., in the east part of the city, petitioned the Commission for an extension of the Parliament St. line from its terminus near Wellesley St., to the Prince Edward viaduct, which carries Bloor St., or a continuation of it, over the Don River. The Commission undertook to build the extension if a petition was presented, and if the petitioners were willing to see the Winchester St. line closed as a condition of the Parliament St. extension being built. The petition was secured and the Commission proceeded to build the extension. At the time of writing (Oct. 16), the tracks are laid on Parliament St. from Wellesley St. to the viaduct, the paving is completed, and construction of a loop will proceed, on land secured some months ago by the Commission, at Parliament St. and the viaduct road, as soon as the city's consent is secured. There is an agitation for a continuation of the Winchester St. service, on Winchester St., for about two blocks east of Parliament St., and providing transportation to and from the Toronto Zoo, chiefly, and at the time of writing the disposition of the Winchester St. line has not been decided.

Other Track Work.—In addition to current maintenance, and the Parliament St. track extension, which involved the construction of 0.555 single track mile of double track, of 122-C-G construction, the line on Parliament St., between Winchester and Wellesley Sts., 0.130 mile, making 0.260 single track mile of track, is being completely rehabilitated. An additional curve is being put in on Lansdowne Ave., at the Lansdowne car house, to furnish an additional entrance; a large piece of special track work is being installed at the intersection of Richmond and Yonge Sts., and a spur for the Commission's cash car is being built on Front St., at the head office building. The cash car is used to bring conductors' proceeds from the divisional car houses to the head office, and to take tickets to the car houses, etc. The spur will enable the car to be placed in a convenient position in relation to the cash office in the head office building.

The Roncesvalles car house construction is nearing completion, and at the time of writing (Oct. 16), it is expected that it will be in operation by Nov. 1. This building, which was described fully in a preceding issue of Canadian Railway and Marine World, is very similar to the Eglinton car house, placed in operation late in 1922, and is thoroughly modern in every respect.

Hillcrest repair shops being built at the corner of Bathurst St. and Davenport Road are nearing completion, and the official expectation is that they will be in operation by the end of this year. A contract for fencing the property was let recently to C. F. Till, Toronto. A complete list of the machinery to be installed was given in a preceding issue.

Auxiliary Buildings for Repair Shops.—Construction on the office building, garage, frog shop, and sand, salt and coal storage building, on the new repair shop property at Bathurst St. and Davenport Road, has been commenced by the contractors, Sullivan & Fried, and good progress is being made. The office building at the Russell car house property, the contract for which was given to Witchall & Sons, Toronto, has also been

started, and the expectation is that it will be completed by the end of this year.

Additions to Bus Fleet.—The Commission has bought 4 single-deck gasoline buses from Fifth Avenue Coach Co., through Packard Ontario Motor Co., Toronto. They are equipped with Knight engines, and the capacity of each is 29 passengers. They will be allocated to the different bus routes throughout the city.

Sale of Cars.—The 129 cars, part of the lot taken over from the Toronto Ry. Co., mentioned in Canadian Railway and Marine World for October as being for sale by tender, were bought by Don M. Campbell, Preston, Ont., who is having the majority of them broken up at the Commission's Eglinton car house yard, where they were stored previous to sale.

Toronto Suburban Ry. City Lines.—The agreement providing for the acquisition by the City of Toronto of the Toronto Suburban's city lines not having been consummated, the Commission has not, of course, been in a position to make a start on rehabilitating them. In addition to the Toronto Suburban lines within the city, the Commission expects to operate also the Toronto Suburban line to Lambton, which extends for about a mile beyond the western city limits. At present, residents of the area served by this line have to pay a 5c fare to the Toronto Suburban to get to the corner of Keele and Dundas Sts., in west Toronto, and the Commission's fare of from 6c to 7c to get to the center of the city. The Commission, we are advised, calculates that a 3c fare to the corner of Keele and Dundas Sts. will compensate for the acquisition, rehabilitation and operating costs of the city limit-Lambton line, which would mean that residents of the area could get to business in downtown Toronto for 10c, instead of 12c as at present.

Motor Bus Owner's Conviction Quashed.

—L. Stafoff, Hamilton, Ont., who was fined \$10 by a Toronto magistrate for having a motor bus for hire for the conveyance of passengers within the city limits without a license, appealed. County Judge Widdifield allowed the appeal on Oct. 13, on the ground that the buses were not being regularly used for hire in the city. He considered that the by-law was ultra vires, if it intended to apply to non-residents and to preclude interurban traffic, even though such traffic would mean an incidental use of the city streets. Stafoff's license had not been renewed by the city, on the ground that the bus traffic would compete with electric railway traffic on the Lake Shore road.

Toronto Railway Award Appealed.

The Toronto City Board of Control, acting on a report from the Corporation Counsel, gave instructions, on Oct. 16, that the award by the majority of the arbitration board, on the amount to be paid by the city to the Toronto Ry. Co. for its property taken over by the city on Sept. 1, 1921, be appealed direct to the Imperial Privy Council. The company has also entered an appeal.

London Street Ry. will, it is reported, appeal against the court of revision's decision to assess its lines at \$7,500 a mile. The assessors increased the assessment from \$5,000 to \$10,000 a mile, but the company appealed and the court of revision cut the increase in half. The city council decided not to appeal.

Electric Railway Projects, Construction, Betterments, Etc.

British Columbia Electric Ry.—Grading on the relocation of the Dunbar St.-Alma Road line, in Vancouver, is in progress, the arrangements for it having been completed between the company, the Vancouver City Council, and the Point Grey Municipal Council. The present line runs on Dunbar St. to 16th Ave., then along that avenue to Crown St., along Crown St. to 10th Ave., and along 10th Ave. to Alma Road, then along Alma Road, a connection being made with the Broadway line. This route was adopted owing to the gradient on Alma Road, between 10th and 16th Avenues. The new route runs about half a block on 16th Ave., in the opposite direction to the present route, thence along a new street to 14th Ave., and diagonally to Alma Road between 12th and 13th Avenues, and thence direct along Alma Road. The new thoroughfare will be 82 ft. wide. At the time of writing (Oct. 11), the new track is expected to be in operation by Oct. 31. The tracks on the old route will be removed. The estimated cost of the work is \$26,000. (June, pg. 450.)

Calgary Municipal Ry.—A press report states that considerable work has been done during this year in welding the rail joints. (Oct., pg. 492.)

Hydro Electric Railways.—Essex District.—An extension of the street railway tracks in the southwestern districts of Windsor and Walkerville, Ont., including the relaying of the pavement on Erie St., will, a press report states, be opened for traffic Nov. 1. (May, pg. 238.)

New Brunswick Power Co.—Considerable progress is reported to have been made with track relaying and repairing on Main St., between Douglas Ave. and Portland St., St. John, but some delay is being experienced in regard to the work on Britain St., owing to slowness in delivery of granite blocks. (Oct., pg. 492.)

The Ottawa Electric Ry. has started work on a building immediately east of its car house, which will consist of a sub-station on Albert St. and a garage on Queen St. The substation will contain a Westinghouse 200 k.v.a. rotary converter. Power will be transmitted from the Middle St. power plant at 11,400 volts and stepped down by three 800 k.v.a. self-cooled transformers. It is expected that the substation, which is part of a plan for the reorganization of the power distribution, will be in operation by January. The garage will be used also for linemen's quarters, and will house the line trucks and motor cars. The estimated cost of the building is about \$40,000.

St. Thomas Municipal Ry.—The St. Thomas, Ont., City Council's street railway committee is reported to have put off until next year the project of extending the line from the end of Ross St. to Pinafore Park. It is stated that an appropriation for the work will be provided in the city estimates for 1924. (July, pg. 353.)

Toronto Eastern Ry.—Rehabilitation of the line, between Bowmanville and Whitby, Ont., is proceeding under the supervision of S. B. Wass, Resident Engineer, and at the time of writing (Oct. 16) the track structure is in first class shape between those points, although none of the overhead construction has been proceeded with. Between Whitby and Pickering, where the line was grad-

ed and structures built, but no rails laid, the grade has been put into good repair and is ready for track laying, which began on Oct. 25, but it is not likely that overhead construction will be done this year. About 85 men are engaged in rehabilitation work.

The Toronto Eastern passes through the Town of Whitby on Mary St. At a meeting between Mr. Wass and members of the Whitby Town Council, in the latter part of September, an agreement was entered into between the railway management and the town, by which, if the town wishes to pave the street, the railway will prepare the strip between the rails, and for 18 in. on each side, and the town will do the paving. This agreement is similar to the one entered into between the management and the Town of Oshawa.

The Toronto Suburban Ry. single track line through the Town of Weston has been moved from the west side of Main St. to the center, and ballasting and surfacing were completed Oct. 9. The town will now proceed with paving the street.

Winnipeg Electric Ry.—Plans for the extension of the Academy Road carline to Kenaston Boulevard, were passed on to the city council recently by the public improvements committee, and approved. Work on the extension was reported to have been started Sept. 25. It starts from Lindsay St., and will consist of a single track to Kenaston Boulevard, connecting with the Tuxedo and Charleswood line, and affording another entry into Assiniboine Park. It is expected to be completed early in November. (Sept., pg. 450.)

Electric Railway Passenger Fares.

Brantford Municipal Ry.—A Brantford press dispatch states that several changes in fares were made on Oct. 13; that the cash fare has been changed from 5c to 6c, with 10 tickets for 50c; that children over 5 years of age, and under 52 in. high, pay half fare, and those over 52 in. full fare, but that 10 tickets will be sold for 25c, irrespective of age, good only during school hours and for children who have a certificate showing them to be bona fide school pupils.

British Columbia Electric Ry.—The Broadview Ratepayers Association applied to the Board of Railway Commissioners for an order to reduce fares on the company's Burnaby Lake line. The matter was heard by the Board at Vancouver on June 29, and an order was issued, Sept. 25, refusing the application. A press report states that the Association has received a copy of a report made by the Board's Chief Traffic Officer, W. E. Campbell, pointing out that the real dispute is as to the spread between Horne Payne, at the city limits, and Crown Ave. The city fare to Horne Payne is 6c. The distance from Horne Payne to Crown Ave. is nearly a mile, and the standard mileage rate for this distance is 3c, which, under the Railway Act, sec. 327, becomes 5c, making the total fare allowed 11c, while the actual fare charged is 10c. Mr. Campbell considers the present spread is justified, and that the applicants have not made out a case that would warrant the Board in ordering any change in the rates.

Quebec Ry., Light & Power Co.—At a meeting of the Quebec City Council, Oct. 5, Ald. Dessereault gave notice that at the next meeting he would move that the city council revoke the privilege granted to the company in regard to an in-

crease of fares, and that the 5c fare be reverted to. The present fare schedule was authorized by a bylaw passed by the city council, Nov. 15, 1919, as follows:—Cash fare, from 5 a.m. until midnight, 7c; cash fare after midnight, 10c; without privilege of transfer. Seventeen tickets to be sold for \$1, and 4 tickets for 25c. Six limited employees' tickets, formerly known as workmen's tickets, to be sold for 25c, good between 6 and 8 a.m., and 5 and 7 p.m., daily except Sundays; all employees in factories, offices, stores, etc., are entitled to use this style of ticket. School children 16 years and under, 10 tickets for 25c. Children, carried in arms with parents, and who do not occupy a seat, travel free; children under 7 years, 3c cash fare or 10 tickets for 25c. This schedule was put in operation Nov. 20, 1919, replacing one which was effective from June 22, 1918, and which it is now sought to have replaced. That schedule is as follows:—Cash fare, 5c; 21 tickets for \$1. Seven workmen's tickets for 25c, good between 6 and 8 a.m., and 5 and 7 p.m., daily except Sundays; school children's tickets, 10 for 25c, good for children attending school, 14 years of age and under. Children carried in arms with parents and who do not occupy a seat, travel free; children 7 years of age and under, 3c cash fare, or 10 tickets for 25c.

Winnipeg Electric Ry.—The Manitoba Provincial Secretary and Public Utilities Commissioner issued the following ruling, Sept. 27, on the Assiniboia Municipal Council's application for the restoration by the company of the 15c car fare in effect prior to 1920, when the present 5-zone system, with a 4c fare for each zone, was adopted:—"After having heard and taken into consideration the evidence and other data submitted in this matter, and what was alleged by representative counsel at the hearing, I do not feel warranted in making any order in the premises, and therefore the application for the removal of order 428 of the Public Utilities Commission, passed Aug. 23, 1920, is declined. In arriving at this conclusion, I am impressed with the fact that the municipal assessment rolls disclose that the population, instead of diminishing since 1920 as claimed, has materially increased, making it quite evident that the rates fixed by the Commission in 1920 could not possibly have had the deleterious effect alleged in this regard."

Electric Railway Finance, Meetings, Etc.

Calgary Municipal Ry.—A press report states that the following figures have been submitted to the Calgary, Alta., City Commissioners respecting the railway operations for the 9 months ended Sept. 30, in comparison with those for the same period of 1922:—Revenue, \$622,342.08, against \$655,372.22; deficit, \$11,684.25, against \$18,394.04; passengers carried, 10,701,444, against 10,874,795; car miles, 2,278,156, against 2,175,658.

Cape Breton Electric Co.—

	7 mons. to July		7 mons. to July	
	July, 1923	July, 1922	31, 1923	31, 1922
Gross	\$53,996	\$52,712	\$392,047	\$340,345
Expenses	50,167	39,567	365,808	330,977
Net	3,829	13,145	26,239	9,368
Interest	5,629	5,641	39,557	39,086
Balance	*1,800	7,504	*13,318	*29,718

*Deficit.

Edmonton Radial Ry.—A press report says that the Edmonton, Alta., City Commissioners' report on the operation of the public utilities for the 8 months

ended Aug. 31, shows a net surplus of \$124,096.38, compared with \$223,744.35 for the corresponding period of 1922. The Edmonton Radial Ry. had a deficit of \$3,471.35 from Jan. 1 to Aug. 31 this year, against a deficit of \$18,215.17 for the corresponding period of 1922.

London & Port Stanley Ry.—A press report states that the revenue for August was \$89,259.64, and operating expenses \$62,092.03, making a gross income of \$27,167.61. It is reported that during the month 79,468 tons of freight were carried, compared with 3,657 in Aug. 1922, and 33,423 in Aug. 1921.

Moose Jaw Electric Ry.—A press report states that this railway carried 1,634,097 passengers from May 1 to Aug. 31, against 1,623,070 for the same period of 1922; that the revenue for the 8 months ended Aug. 31 was \$7,096.65 less than for the same period of 1922; that the deficit was \$17,559.59, or about \$3,000 more than the same period of 1922; that the company began selling a term pass on May 20, and that, up to Aug. 31, while the number of passengers had increased, the revenue had declined and the deficit increased.

New Brunswick Power Co.—At the annual meeting at St. John, N.B., Oct. 6, the following directors were elected:—E. N. Sanderson, New York, President; M. A. Pooler, St. John, Vice President and General Manager; W. C. Allison, W. S. Fisher, W. E. Golding, J. E. McAvity, A. P. Paterson and R. Sullivan, St. John; L. C. Gerry, Providence, R.I.

Quebec Ry., Light, Heat & Power Co.—A press report states that about 98% of the company's shares have been exchanged for stock in the Quebec Power Co., under the latter company's offer of one of its shares for every four of Q. Ry., L., H. & P. Co., if accepted by Sept. 28. It is reported that G. Parent, K.C., M.P., one of the Quebec Power Co.'s directors, is to be a Q. Ry., L., H. & P. Co. director, and that the latter company will retain its corporate identity for some time.

Oshawa Ry.-Thousand Islands Ry.—The annual meeting of the shareholders of both companies was held at Gananoque, Ont., Sept. 5. The following are the directors:—J. E. Dalrymple, President; H. W. Cooper, Manager; J. H. Valleur, Secretary-Treasurer; J. M. Sparling and J. A. Yates. The General Auditor is J. M. Rosevear. All of the foregoing are Canadian National Rys. officials.

St. Thomas Municipal Ry.—A press report states that the deficit on operation for September was \$703.71, which is said to have been due to expenditure on track repair work. The doing away with car service on Sunday mornings is reported to have reduced operating costs, without lessening the number of passengers carried during the day.

Winnipeg Electric Ry.—

	Aug., 1923	Aug., 1922	31, 1923	31, 1922
Gross	\$386,758	\$399,499	\$3,515,604	\$3,550,671
Expenses	279,820	294,291	2,471,641	2,631,161
Net	106,938	105,248	1,043,963	919,510
Fixed charges	72,006	71,018	599,935	499,719
Surplus	34,932	34,230	444,028	419,791

The August gross earnings from the railway utility decreased \$16,781 from August 1922, due to a decrease in the daily number of passengers; the operating expenses decreased \$9,240. The gross earnings of the electric utility increased \$13,688, and the operating ex-

penses \$8,792. The increase in the earnings was due to the building up and increasing of the light and power load, and the increase in expenses was due to the increased cost of power on account of increased sales. The gross earnings of the gas utility decreased \$9,647, and operating expenses decreased \$13,984, compared with Aug. 1922. The decrease in earnings was due to a reduction in rates, effective June 1, and a general decrease in the gas consumed by all classes. The decrease in expenses was due to a decrease in maintenance and operating costs, on account of better operating conditions, a decrease in the cost of coal, and an increase in the amount received from the sales of by-products.

Mainly About Electric Railway People.

A. Baltzer, heretofore Master Mechanic, Windsor, Essex & Lake Shore Rapid Ry., Kingsville, Ont., has been appointed Superintendent of Shops there.

H. H. Couzens, General Manager, Toronto Transportation Commission, and President, Canadian Electric Railway Association, returned to Canada on Oct. 11, after spending a few weeks in England. He was accompanied by Mrs. Couzens, who had been in England for some months. In conversation with press representatives, when asked whether his observation of bus operation in London had led him to look forward to the time when buses will be substituted for street cars in Toronto, he replied substantially as follows:—"No. The bus system in London has improved greatly and is now wonderful, particularly as concerns the co-relation of its operation with the tubes; but climatic conditions make a great difference here, and Toronto is not nearly large enough to make tubes profitable. They are not a possibility for a city of its size. We will stick to surface traction." Mr. Couzens said that the Toronto street car system compares favorably with anything he saw in England, and added that Ontario people should fully appreciate their advantage in having cheap hydro-electric power.

J. Davidson, Deputy Chairman, British Columbia Electric Ry. Co., of London, Eng., and Mrs. Davidson, have been visiting British Columbia.

Budleigh Faraday, who has been appointed Manager, Commercial Department, New Brunswick Power Co., St. John, has had extensive experience in various branches of electric light and power business, including production, transmission, distribution and commercial, and has latterly devoted his time to industrial power development, having been for the last seven years, Division Manager, Southern Canada Power Co., Montreal, and prior to that, was in charge of the Kaministiquia Power Co.'s transmission and distribution systems at Fort William, Ont.

Major-General Sir John M. Gibson, Honorary President, Canadian Electric Railway Association, and a director of the Dominion Power & Transmission Co., and Lady Gibson attended the marriage of their niece, Miss Kathleen Gibson, at Brantford, Ont., Oct. 20.

Geo. C. Graham, Superintendent of Power and Equipment, Windsor, Essex & Lake Shore Rapid Ry., Kingsville, Ont., died very suddenly recently, owing to heart failure.

Electric Railway Employees' Wages, Etc.

British Columbia Electric Ry.—The report of the board of conciliation appointed by the Labor Department upon the employees' request for a 10% increase in wages, and certain changes in working conditions, equivalent to wages and working conditions in effect prior to Jan. 1922, has been made. It is signed by all the members, viz.: A. M. Pound, chairman; A. G. McCandless, representing the company, and R. P. Pettipiece, representing the men. The board began its sittings Aug. 27, and after two adjournments, completed its work Sept. 27, having effected a settlement accepted by both parties. The report states that the men's chief arguments in asking for an increase of wages were that they were simply asking for something they had previously; that they could not live on present wages, and that the percentage of increase in wages paid to street railway men in a number of the principal cities in Canada, was higher than the increase in Vancouver. The company contended that the cost of living had decreased about 5% since Nov. 30, 1921, when the 10% reduction was put into effect; that the present was not an opportune time to increase wages, and that the company was paying higher wages than any other street railway in Canada operated by a company. After hearing of the evidence, a conference between the company and its employees was held, but no progress was made towards a settlement, although both sides agreed that the board's award be made on the evidence submitted. The employees' representative withdrew from the deliberations Sept. 24, and on the same day notice was served on the company that the men would strike Sept. 26, failing a settlement in the meantime. The board's deliberations on the question of an award were held over temporarily, it being considered more important to take some action to avert a strike. An all-day session was held Sept. 25, which resulted in the following settlement, which was accepted by both parties:—Motormen and conductors shall receive 3½c an hour increase over schedule in agreement dated Jan. 5, 1922. Other employees who were reduced under the award of Nov. 30, 1921, to receive an increase of 2c an hour. Despatchers to be given an increase of \$5 a month. Sec. 39 of the agreement, regarding spread-over, which provides for the payment of 10c an hour in addition to the regular pay when a run is not completed within 10 hours of the commencement of the first shift, to be amended by substituting 20c for 10c. Conductors making relief on the road to be allowed 5 minutes for taking out fare box and supplies. Except as indicated in these two paragraphs, the agreement dated Jan. 5, 1922, is to remain in force. The new agreement is for one year from Sept. 1, 1923. The company's employees took a vote on the question of accepting the terms of the award or striking, the result of which was announced Oct. 10 as follows:—For acceptance, 907; against, 261; spoiled ballots, 2.

Hull Electric Co.—Canadian Railway and Marine World for July stated that the employees had asked for a revision of the wage schedule which went into effect July, 1922, and under which conductors and motormen's maximum pay was 44c an hour. They also asked for an 8-hour day. We are officially advised that the management consented to an

increase of 1c an hour, but not to any change in working hours.

London & Port Stanley Ry.—A question was asked at a meeting of the London, Ont., Railway Commission, Oct. 8, regarding the revision of the employees' wage schedule. J. E. Richards, Manager and Treasurer, stated that he had not been able to prepare a report on the matter, which was therefore laid over until the next meeting.

Ottawa Electric Railway Franchise Negotiations.

Ottawa City Council's special street railway committee resumed consideration of the question of a new agreement with the Ottawa Electric Ry. Co. on Oct. 1, and at another meeting Oct. 4, when some progress was made. A letter was read from Major Burpee, Manager, giving details of the company's revenues for 1922 and to Aug. 31, 1923, in comparison with those of 1921, which were used as the basis of the Feustal report to the Ottawa City Council in 1922, on the recommendation of which the voters at the municipal election in January decided against buying the line, and against a service at cost franchise. The figures are as follows:—

	1921.	1922.	1923.
Jan.	\$154,427.63	\$160,810.48	\$155,014.00
Feb.	141,543.67	148,474.04	136,777.24
March	157,540.96	158,997.29	161,661.08
April	145,589.95	145,819.62	147,239.26
May	150,408.13	149,657.90	142,714.29
June	153,500.81	148,646.76	144,396.24
July	150,267.30	145,466.66	136,977.81
Aug.	142,715.67	139,865.87	132,890.12
Sept.	158,345.87	156,502.78	
Oct.	148,205.34	146,506.83	
Nov.	150,426.82	143,999.83	
Dec.	168,010.69	159,532.73	

Total.....\$1,820,982.84 \$1,804,280.88

Note:—Decrease in 1922 as compared with 1921 (459,721 passengers), \$16,701.96; decrease for 8 months in 1923 compared with corresponding months of 1922 (840,079 passengers), \$40,068.67.

Further consideration of the matter was adjourned, but it was intimated that it was expected to have a new agreement drafted in time for it to be placed before the voters prior to the next municipal election.

Montreal Tramways Mutual Benefit Association.

The report for the year ended April 30, gives the following summary of the relief work done during the year: Members disabled through sickness or injury, 1,522. Visits made by physicians to disabled members, 529. Consultations given by physicians to disabled members, 8,107. Prescriptions issued, 6,727. Paid for sickness and injury, \$11,094.30. Paid for medicine, \$2,901.74. Paid for pensions, \$2,569. Paid for withdrawals, \$479.02. Paid for death and burial insurance, \$11,383.35.

The percentage of deaths to the total membership for the year was 0.90%, being the same percentage as the previous year. The amount paid in death benefits for the year was \$11,383.35. Since the formation of the association to the end of April, 417 members died, and the association paid out in death and burial benefits \$175,059.64; sickness and injury, \$205,107.60; pensions, \$18,986; withdrawals, \$7,421.27; a total of \$406,574.51. There has been paid in addition \$102,492.33 for medical attendance and medicine. The expenses of management were \$125,644.24. The amount received from members for fees and dues for the same

period was \$289,852.50. The committee gratefully acknowledges receipt from the Montreal Tramways Co. of \$18,493.14, which amount, added to the fees and dues received from members, viz., \$16,313, and the interest received on investment and bank deposits, amounting to \$11,130.53, made the total revenue for the year, \$45,936.67, and expenses being \$44,170.05, left a surplus of \$1,766.62, which was transferred to the reserve fund.

The following are the directors: Lt.-Col. J. E. Hutcheson, General Manager, President; Hon. J. L. Perron, K.C.; D. E. Blair, Superintendent Rolling Stock; A. S. Byrd, Superintendent Power Plant; R. M. Hannaford, acting Chief Engineer and Superintendent of Construction; and H. R. Mallison, assistant to President and Purchasing Agent; representing the company. O. Dufort, E. Lachapelle, E. Meilleur, W. Pageau, H. Potte, R. W. Ponting and C. Tapp, representing the employees. The vacancy caused by the death of A. J. Gadoua, acting Superintendent of Transportation, has not been filled. Patrick Dubee, Secretary-Treasurer of the company, is also the Association's Secretary-Treasurer.

Port Arthur and Fort William Electric Railway Differences.

The Port Arthur, Ont., Public Utilities Commission and the Fort William City Council's public utilities committee met in Port Arthur, Oct. 11, to discuss the operation of the interurban sections of the two lines. Until about a year ago the two railways ran their cars over the interurban section into both Fort William and Port Arthur, but differences having developed, the arrangement was dropped, each railway stopping its cars at the boundary line, where passengers had to change cars. From the time this system came into operation, efforts have been made by citizens of both places to bring about a better understanding. A lengthened discussion on all points of the matter took place on Oct. 11, which resulted in the following resolution being passed:—"That a committee consisting of Chairman M. C. Campbell, Chairman C. E. Chapple, Mayor Edmeston and Mayor Matthews be appointed to go into the whole of the street railway affairs and to draft a working agreement for 1924 or for as long a period as may be decided, the agreement to be retroactive to present date, and that they report to a joint meeting to be held in Fort William, Thursday, Oct. 18." A Port Arthur press dispatch of Oct. 20 stated that an agreement had been reached to start a through service immediately.

Electric Railway Notes.

The Board of Railway Commissioners passed an order on Sept. 20, recommending to the Governor in council, for sanction, the Grand River and the Lake Erie & Northern Rys. general train and interlocking rules.

Winnipeg Electric Ry. has been granted permission by the Manitoba Court of Appeal, to appeal against a decision by the Provincial Secretary and Public Utilities Commissioner respecting the use of joint poles by the railway and the city hydro electric power system, under an agreement made in 1912.

Winnipeg Electric Ry. Co. started operating 2 motor busses on Scotia St., Oct. 1. The route is from Cathedral St.

along Scotia St. to Inkster St., and return, a 9-minute service being given during rush hours and a 15-minute service the rest of the day.

The Brantford, Ont., City Council discussed, on Oct. 8, the abolishing of the Brantford Street Railway Commission, which now operates the Brantford Municipal Ry., and replacing it by the City Council's street railway committee. A motion for the submission of the matter to the ratepayers at the municipal election in December, was placed on the agenda for the next council meeting.

The Waterloo-Wellington Ry., from Kitchener to Bridgeport, Ont., has been taken over by the Kitchener Light Commissioners, on behalf of the City of Kitchener, which was recently authorized to buy it. An improved service has been inaugurated, and plans are being worked out to give a half-hourly service early next year.

Kitchener & Waterloo St. Ry. has ordered, for rehabilitating the Waterloo-Wellington Ry. between Kitchener and Bridgeport, 3,000 cedar ties from Wiarton Lumber Co., Wiarton, Ont.; several carloads of poles from Don M. Campbell, Preston, Ont., and 16,000 lb. of feeder and trolley wire from Canada Wire & Cable Co. No order has been given for rails, as it is intended to use 80 lb. A.S. C.E. rails, in 60 ft. lengths, which were ordered for the Kitchener-Waterloo line and not used.

The hearing of the New Brunswick Power Co.'s application for an injunction against the City of St. John, in regard to the installation of a hydro electric power distribution system in the city, was resumed in the Chancery Court at St. John, Sept. 25, and the arguments, so far as the interference with the plaintiffs' system is concerned, were closed Sept. 27. On Oct. 1, arguments were opened on the city's application for a definition of its rights regarding the poles in the five north end wards, owned by the city and used by the New Brunswick Power Co. in connection with its power distribution system. Judgments are not expected for some time.

Levis County Ry. has been calling attention to the competition of autobuses in the district within which it operates. A press report states that there are nearly 300 autobuses operating on various highways and roads in the province, carrying on an average 30,000 passengers a day, and that there are no regulations governing their standard, routes or fares. The Quebec Government is said to have had the whole question under consideration and to have prepared a bill to be discussed at the Legislature's next session, providing for the bringing of autobus traffic under the Quebec Public Service Commission's control.

Kitchener & Waterloo St. Ry. has ordered 2 one-man single truck, double end operation safety cars from Ottawa Car Manufacturing Co., which will be similar to the 10 ordered from the same company by Quebec Railway, Light & Power Co., and which were described fully in Canadian Railway and Marine World for October, pg. 496. They will have the following dimensions, etc.: Length, 30 ft. 9½ in.; length of platform, 6 ft.; length of body over corner posts, 17 ft. 9½ in.; width over all, 7 ft. 10½ in.; seating capacity, 36. They will be equipped with full safety features, including Westinghouse air brakes and Westinghouse 508A motors. They will have automatic step similar to that operated by the Chicago Ry.

Marine Department

Ship Building and Ship Repairing Throughout Canada and Newfoundland.

B.C. Marine Engineers & Shipbuilders Ltd., Vancouver, B.C., has been given a contract by the Dominion Public Works Department for overhauling and repairing the dredge Fruhling, no. 303 of the British Columbia dredging fleet, for \$15,490 and unit prices.

B.C. Marine Railway Co., Vancouver, B.C., completed repairs on the Dominion Government dredge 303 recently. The steam tugs Shamrock and Storm King have also been overhauled and repaired, as well as the steamships Kangean Rio Azul and Canadian Transporter.

Canadian Vickers Ltd., Montreal, did the following repair work during September at its Maisonneuve plant: Canadian Government dredge 16, opened up machinery for inspection and repairs, and sundry owner's repairs; Marine Department's hopper barge 3, repairs under builder's guarantee, and owner's sundry repairs; Canadian Government Merchant Marine, s.s. Canadian Ranger, 5,752 tons, docked Sept. 22, for survey, underwriters' and owner's repairs, and bottom painting, undocked Sept. 25; Canada Steamship Lines, s.s. Maplebrook, 1,515 tons, docked Sept. 7, for owner's and underwriters' repairs, undocked Sept. 14; s.s. Richelieu, 5,227 tons, docked Sept. 26, for temporary repairs to bottom damage, due to grounding, also owner's repairs, undocked Sept. 28; Imperial Oil Ltd., s.s. Sarnolite, 2,060 tons, deck and engine room repairs and collision damage; barge 6, docked Aug. 30, for survey and temporary repairs, undocked Sept. 1; s.s. Iocolite, 2,060 tons, repairs to bow damage, also to bridge, and sundry owner's repairs; s.s. Imperoyal, 2,253 tons, docked Sept. 20, for survey and shell damage repairs, including 7 new shell plates, 9 shell plates treated, repairs to 7 floors and frames and to 3 oil-tight bulkheads, also owner's sundry repairs; Aube Steamship Co., s.s. Joyland, 1,845 tons, docked Sept. 17, for owner's and underwriters' repairs, undocked Sept. 20; Minto Trading Co., J. W. Norcross, agent, s.s. Kamaris (formerly Mariska), 2,702 tons, docked Aug. 31, cut in two and a 48 ft. new section added, and the ship refitted for lake service, underwriters' repairs, boiler repairs, alterations to derricks and miscellaneous work, undocked Sept. 21; Sir Frederick Becker, steam yacht, Thomas B., 214 tons, boiler and owner's sundry repairs; Ravans & Corrado s.s. Giuseppe, 4,859 tons, assisting surveyors in tank examination; Elder, Dempster & Co., s.s. New Texas, 6,568 tons, tank top calked. The following work was done in the harbor: Anchor-Donaldson Line, s.s. Corinaldo, 6,900 tons, tube expanders and copper pipes repaired; s.s. Concordia, 5,388 tons, voyage repairs; s.s. Coracero, copper pipes repaired; Canada Steamship Lines, s.s. Cataract, 839 tons, valve motion of steering engine readjusted and refitted; s.s. Thunder Bay, 1,870 tons, heating and straightening lugs on hatch coamings, to take hatch strongbacks; s.s. Mapleboro, 1,141 tons, derrick posts repaired; Clarke Steamship Co., s.s. Gaspesia, electric welding on winch stop valve, and other repairs; Eastern Steamship Co., s.s. Judge Hart, straightening damaged rudder and stock, and refitting same; United States Shipping Board, s.s. Aledo, 4,768 tons, installing 12 sets of Kinghorn valves for air pump; s.s. Sin-

astra, 6,052 tons, retubing superheaters and general voyage repairs; Hain Steamship Co., s.s. Tremeadow, 5,302 tons, voyage repairs; Pool Shipping Co., s.s. Wearpool, 4,929 tons, voyage repairs; Granges Oxelosund Traukaktiebolaget, s.s. Mertainen, 4,531 tons, repairing feed and ballast pumps and suction; Kawasaki Dockyard Co., s.s. Washington Maru, 5,864 tons, copper steam pipes renewed; Norwegian-American Line s.s. Topdalsfjord, 4,250 tons, supplying electrical fittings.

Canadian Vickers Ltd., is reported to have despatched from Montreal on Oct. 2, the two sections of the s.s. Kamarisk for the Upper Lakes. Kamarisk is the new name of the s.s. Mariska, particulars

Dominion Marine Association.

Honorary President, A. A. Wright, Vice President and Managing Director, Davie Shipbuilding and Repairing Co., Montreal and Toronto.

President, T. R. Enderby, Operating Manager, Canada Steamship Lines, Ltd., Montreal.

First Vice President, G. J. Madden, George Hall Coal and Shipping Corporation Ltd., Ogdensburg, N.Y.

Second Vice President, A. E. Mathews, Mathews Steamship Co. Ltd., Toronto.

Executive Committee. The President, First and Second Vice Presidents; and W. E. Burke, Century Coal Co. and Canada Steamship Lines Ltd.; W. Crawford and Yvon Dupre, Sincennes-McNaughton Lines Ltd., Montreal; L. L. Henderson, formerly of Montreal Transportation Co., honorary member; W. J. McCormack, Algoma Central Steamship Lines, Sault Ste. Marie, Ont.; Col. G. P. Murphy, C.M.G., Ottawa Transportation Co., Ottawa, Ont.; C. H. Nicholson, Canada Atlantic Transit Co., and Canadian National Ry. Central Region Car Ferries, Toronto; E. W. Oliver, Niagara, St. Catharines & Toronto Navigation Co., Toronto; J. F. Sowards, Kingston, Ont.; J. F. M. Stewart, Toronto; John Waller, Keystone Transports Ltd., Montreal; Senator L. C. Webster, Webster Steamship Co. Ltd., Montreal.

Counsel, Francis King, K.C., Kingston, Ont.

Official Organ, Canadian Railway and Marine World, Toronto.

of which were given in Canadian Railway and Marine World for September, pg. 457. She was placed in the drydock Aug. 31, cut in two, an additional section put in amidships, and the two sections prepared for being towed to the Upper Lakes, where she is being completed.

Cholberg Shipyard, Victoria, B.C.—A Victoria press report of Oct. 12 said the dispute about this yard had been settled, that it had been taken over by C. Cholberg, and that it will be operated on a small scale for building scows, barges, schooners and other timber vessels, and for general repair work.

Collingwood Shipbuilding Co., Kingston, Ont., did the following repair work during September:—Canada Steamship Lines, s.s. Cape Trinity, 2,105 tons, docked Sept. 6 for painting and repairs to rudder and seacocks, undocked Sept. 11; s.s. Cayuga, 2,196 tons, docked Sept. 12 for survey and repairs to wheel, undocked Sept. 13. Glen Steamships Ltd., s.s. Glenarm, 1,564 tons, docked Sept. 17 for repairs to bottom damage, necessitating removal of 20 plates, undocked Oct. 2.

W. C. McKay & Sons, Shelburne, N.S., are reported to have launched on Oct. 10, an auxiliary schooner named Dorothy L. Bell. It is said that she is 95 ft. over all, 21 ft. beam, and 9½ ft. deep, and is equipped with a 55 h.p. Atlantic engine, and a 4 h.p. engine for hauling anchor, shifting sails, etc.

Newfoundland Government Dockyard, St. John's, did the following repair work recently:—s.s. Seal, 608 tons, drydocked for survey, after breaking propeller shaft and losing propeller on Labrador coast; new shaft and propeller supplied and fitted, several new shell plates and sundry engine repairs; s.s. Vesuvio, 5,449 tons, put in to St. John's with steering gear damaged and sundry main engine repairs required, repairs completed in 6 days, and ship proceeded on her voyage; s.s. Daisy, 248 tons, ice damage, 4 shell plates renewed, bilge keels off, faired and refitted, rudder post faired and one new gudgeon fitted, new rudder made and fitted, steering engine bedplate renewed; s.s. Carvalho Araujo, Portuguese cruiser, struck a rock, drydocked for survey, found stem post broken, 5 shell plates torn and buckled, frames fractured and extensive internal damage, permanent repairs done in 10 working days; s.s. Rovburgh, 4,396 tons, loaded with pit props for England, stranded on High Grego Island, towed off by s.s. Clyde, reached St. John's under own steam and drydocked for survey; forward stem broken, 11 shell plates torn and buckled and extensive internal damage to floors and frames, center girder and bulkhead, main engine damaged.

Prince Rupert Drydock and Shipyard, Prince Rupert, B.C.—The two wooden hulls for patrol cruisers for the Marine and Fisheries Department, which are being built at this plant, as mentioned in our last issue, will have the following general dimensions: length over all, 60 ft.; breadth, extreme over planks, 14 ft.; depth, moulded to raised deck, 9 ft. 4 in.; depth, moulded to deck line, 7 ft. 4 in.; load displacement, 41.5 tons; draft, extreme, 6 ft. They will be equipped for a trial speed of 9 knots. The keels will be of fir in one length each, the shoes of gum, planking of fir and frames and floor of oak. They will be built with raised deck, with large deck house containing wheel house and captain's accommodation, finished with teak outside and cedar within, and all hatches, skylights, etc., will be of teak. A stack will be placed just aft of the deck house for ventilation and engine exhaust. The cabin for the Department's inspector will be fitted with fixed berth, dresser, wardrobe, desk and chair, of birch, mahogany finish and white enamel, with hardware nickel plated. A spiral stairway will lead from the main deck to the hall below. The main saloon will be fitted with side settees, upholstered seats and backs, the backs to form upper berths, dining table and buffet. The galley will be equipped with range, sink, dresser and cupboards, and hot water heater for supplying the hot water heating system by which the ships will be heated. The propelling machinery will consist of 60 h.p. Beardmore semi-Diesel engine with 2 cylinders, 7 h.p. auxiliary set, Gardiner engine driving auxiliary air compressor, dynamo and pumps. The crew's quarters will be

fitted with seat berths and drawers each side, with folding pipe berths above, clothes lockers, etc. One ship will carry a lifeboat and the other a 14 ft. dinghy, both handled by davits. The usual deck equipment will be supplied, consisting of anchors, chains, lines, cleats, fairleads, etc., gypsy windlass forward and anchor davit, anchors stores in hawse pipes, and a mast on top of the wheel house.

St. John Drydock & Shipbuilding Co., St. John, N.B.—At the time of writing (Oct. 22), it has been arranged for the company's new drydock at Courtenay Bay, to be opened by the Governor-General, Lord Byng, on Oct. 29, the opening to be preceded by a luncheon. Invitations have been issued to a number of persons particularly interested in shipping and shipbuilding matters, including

the Dominion Minister of Public Works, Mr. King; the leader of the Dominion Opposition, Mr. Meighen; E. W. Beatty, President, C.P.R., and Sir Henry Thornton, Canadian National Rys.

Victoria Machinery Depot., Victoria, B.C.—The United States schooner Annie M. Campbell went into this yard Oct. 11, to have her foremast taken out and a new one stepped, which she had brought down on her deck from Chemainus. The tug Victory is reported to be on the ways having a new stern fitted.

Wallace Shipbuilding & Drydock Co., North Vancouver, B.C., is fitting the s.s. France Maru for grain carrying, and is repairing the s.s. Siam's crankshaft and making other repairs to her necessitated by a collision at San Francisco, Cal. Other ships in the yards for repairs are

Omar, S. N. Castle, Sea Wolf and Cowichan.

Yarrows Ltd., Victoria, B.C., did the following repair work during September:—For Britannia Mining & Smelting Co.: F. S. Quadra, 683 tons, docked for survey, tail shaft drawn, boilers inspected, hull chipped, cleaned and painted; for C.P.R.: M.S. Motor Princess, 700 tons, docked for underwater repairs forward, due to stranding; for Dominion Government: s.s. Newington, 193 tons, general survey; for Furness, Withy & Co.: s.s. Siberian Prince, 5,604 tons, extensive bottom damage repairs, due to stranding; for Grand Trunk Pacific Coast Steamship Co.: s.s. Prince Rupert, 3 new bronze propeller blades; for Pacific Salvage Co.: s.s. Algerine, 592 tons, alterations to feed pipes.

The Inland Water Freight Rates Act and the Lake Grain Shipping Situation.

Further particulars of the threatening outlook created for the Canadian grain trade, and for the country as a whole, by the Inland Water Freight Rates Act, 1923, were given in Canadian Railway and Marine World for October, the act's effects and the developments taking place in the lake grain shipping situation being traced to the point where the members of the U.S. ship owners' association, at a meeting in Cleveland, on Sept. 17, reiterated their intention of keeping out of the Canadian grain trade so long as the Canadian Government persists in trying to compel ship owners to file details of grain rates with the Board of Grain Commissioners—this despite the Government's decision to practically allow ship owners to evade the law by filling, not a copy of tariff, as the act requires, but merely a historical document setting forth details of past shipments.

By Sept. 20 the general public, particularly western farmers, had gained some knowledge of the disastrous situation which threatened to result from the Government's bungling legislation, and daily papers carried numerous reports of representations having been made to the Government urging it to take action to avert that situation. No action was taken, however, beyond a continuation of the attempts to entice U.S. carriers into Canadian trade by promises that the law would not be enforced very severely, and in the meantime lake grain rates exhibited an increasingly evident tendency to rise, so that by Sept. 24 the spot rate from Fort William to Buffalo was $5\frac{1}{4}c$ a bushel, and $5\frac{1}{2}c$ on the following day, while the rate from Duluth was but $2\frac{3}{4}c$, and space out of Duluth for the first half of October was quoted at 3c. Last year there was very seldom a spread of more than a quarter of a cent a bushel between Duluth and Fort William, so that it quickly became evident to the grain trade that the act's operation promised to cost Canadian farmers a lot of money. An influence which tended to prevent grain shippers from bidding rates out of sight was the entrance of several independently-owned U.S. ships, a number of Norwegian oceangoing ships, and a few British tramps, into the Canadian lake grain trade, in the latter part of September. By Sept. 25 the owners of some 25 U.S. ships had signified their intention of employing them in the Canadian grain trade.

On Sept. 27, consequent on a visit a few days previously of F. A. Warren, President, New York Exporters' Association, to Cleveland, where he conferred

with members of the U.S. ship owners' association, a meeting was held in Toronto, which was attended by him, by L. J. Boyd, Chairman, Board of Grain Commissioners; Francis King, Counsel, Dominion Marine Association; H. D. Goulder, General Counsel, U.S. Lake Carriers' Association; Capt. J. B. Foote, Toronto Insurance and Vessel Agency; T. R. Enderby, Operating Manager, Canada Steamship Lines; A. E. Mathews, President, Mathews Steamship Co.; Jas. Richardson, Richardson Grain Co., and numerous U.S. ship owners or their representatives. The object was to try to find some way of allowing U.S. ship owners to enter the Canadian grain trade without sacrificing their avowed policy, which is that their ships shall engage only in the purely competitive business of lake carriage. The meeting was without constructive result, Mr. Boyd making it clear that he was without authority to permit any further evasion of the law than the Government had sanctioned previously. Following this meeting, Mr. Boyd reported on the situation to the Minister of Trade and Commerce, Mr. Low.

Also, on Sept. 27, Premier Bracken, of Manitoba, after having had his attention called repeatedly to the threatening outlook, stated that while the matter was one for action by the Dominion Government, if it did not do something to relieve the situation, Manitoba would have to take steps to protect her own interests. By Sept. 29 it was definitely settled that four U.S. shipping companies, Jenkins Steamship Co., Oakes Co., Snyder Co., and Cleveland Cliff Iron Co., would enter the Canadian grain trade, it being generally understood that they would file statements of charters made, accompanied by a letter of protest, and the entry of their ships promised some material relief.

The whole situation was considered at Dominion cabinet meetings on Sept. 28 and 29, and what may or may not have been a coincidence, was the appearance in daily papers of Sept. 29 and 30 of articles stating that it was likely that legal action would be taken to test the act's validity, on the ground that it is unconstitutional and opposed to public policy, and suggestions were freely advanced by interested parties that perhaps the best way out for the Government would be provided by a court declaring the act ultra vires, issuing an injunction, and shelving it in entirety until after the close of lake navigation.

It was reported on Sept. 30 that the Minister of Trade and Commerce had

telegraphed Manitoba persons who had been urging him to take some action, stating that, in his opinion, with the facilities provided, all but some 25 to 40 million bushels of grain offered could be moved.

Early in October, several factors recognized beforehand by those intimately in touch with the situation as likely to have a favorable effect in avoiding a grain blockade, despite the act's effects, began to make themselves more evident. These were the lateness of the crop, the fact of the grain arriving at Fort William and Port Arthur requiring a great deal more cleaning than usual, thus delaying operations at the terminal elevators, a light export demand, tending to slow up lake shipments, and a conviction among farmers, and a good percentage of grain dealers, that a "bull" market in wheat is due later on, tending to encourage storage of wheat rather than immediate sale, and therefore tending also to slow up lake shipments. The situation during the first half of October was that the tonnage offering at Fort William and Port Arthur was able to take care of the cargoes offering, largely because of the existence of the favorable factors just mentioned. On Oct. 5, the Chairman of the Board of Grain Commissioners expressed himself as hopeful that all grain offering could be handled, and said that he had been assured that 44 U.S. ships would participate. On the same date reports were current that the Dominion Government was considering the abrogation of the coasting law, as a means of trying to encourage U.S. ship owners to participate, but it was noticeable that these reports did not offer any suggestion as to how such action would produce that effect.

Closely following Mr. Boyd's optimistic statement, however, reports became pessimistic again. A prominent broker on Winnipeg Grain Exchange pointed out that the operation of the act was costing the Canadian farmers about \$75,000 a day, on account of rates being higher than last year, and said that while he considered the Fort William-Buffalo rate should be about the same, or perhaps $\frac{1}{4}c$ higher, than the Duluth-Buffalo rate, or about 3c, it was running at about 5c, and that the rate to Georgian Bay ports, which he thought should be about $2\frac{1}{2}c$, was running at about $5\frac{1}{2}c$. On the same date, the Minister of Trade and Commerce received telegrams from Premier Dunning, of Saskatchewan, and the President of Calgary Board of Trade, asking for a termination of the almost unbearable uncertainty surrounding all

branches of the grain trade, and also for assurances that a blockade would be avoided.

E. W. Beatty, President, C.P.R., was reported to have said in Winnipeg, on Oct. 5:—"It is in the national interest that measures should be taken without delay to ensure provision of sufficient shipping. We share the general concern over the delay in effecting a definite settlement. The C.P.R. has facilities to enable it to handle a considerable grain tonnage all-rail to eastern ports, but it is obvious that grain could not move in anything like its present volume if forwarded by the all-rail route."

It was reported on Winnipeg Grain Exchange on Oct. 11 that the U.S.-owned Snyder ships would be withdrawn from the Canadian grain trade, and on Oct. 12 it was reported that the Cleveland Cliff ships would also be withdrawn, the U.S. owners having reconsidered the matter and changed their decision to be parties to the Dominion Government's interference in a purely competitive business. On that date the Fort William rates to Georgian Bay ports were running at about 5½c, to Buffalo 6c, and to Montreal 14c. On Oct. 13 the Cleveland Cliff line owners stated that they were not going to withdraw their ships permanently from the Canadian grain trade, but that they had been transferred to the U.S. ore trade for a time, and added that they had, however, suggested to the Board of Grain Commissioners "certain changes in the regulations, which, if adopted, would help the general situation." Details of these proposed changes were not made public, nor is information available as to whether they were of the nature of those adopted on Oct. 19, as specified further on in this article. By Oct. 18 shippers were bidding a 7c spot rate to Buffalo and proportionately high rates to Georgian Bay ports and Montreal.

Average rates for lake grain carriage in 1922 were as follows:—Fort William-Buffalo, Sept. 2.84c a bushel, Oct. 4.49c, Nov. 4.87c, and Dec. 5.89c; Fort William-Georgian Bay ports, Sept. 3c, Oct. 3.88c, Nov. 5.65c, and Dec. 6.25c; Fort William-Montreal, Sept. 10.4c, Oct. 9.77c, Nov. 11.93c, and Dec. 12.63c. At the time of writing (Oct. 19), 5½c is being bid to Georgian Bay ports, 7c to Buffalo, and 13½c to Montreal.

The Minister of Trade and Commerce went to Fort William shortly after the reported withdrawal of the U.S. ships which had been participating in the Canadian crop movement, and conferred with the Board of Grain Commissioners. On Oct. 19 he addressed the Fort William Canadian Club, and stated that the act had been passed in the interests of western farmers, but he is reported to have admitted that it had not worked out just as it had been hoped. He is also reported to have said that he would consider himself unworthy of the office he holds and derelict in his duty to Canada if he did not pledge himself that there would be no blockade, but the report of his address indicates that he thinks the greatest danger threatening the grain trade and the country is not lack of grain ships on the Great Lakes, but lack of export demand for wheat.

On Oct. 19 the Board of Grain Commissioners authorized a more pronounced evasion of the law than that mentioned in our October issue, by addressing the following statement to all concerned:—"You are hereby notified that the Board of Grain Commissioners is prepared to accept as a compliance with the Inland

Water Freight Rates Act, 1923, sec. 3, either the filing with the Board of tariffs by the ship owner, or the filing by the shippers, before loading, of copies of charters or contracts for space." The Chairman of the Board is reported to have stated that this arrangement was expected to pave the way for entrance of as many U.S. ships as would be required to augment the Canadian fleet in handling this year's crop. According to a Winnipeg press report, this announcement was followed by a drop of 2c in the rate from the head of the lakes to Buffalo, viz., from 7c to 5c.

W. H. McGean, chairman, U.S. ship owners committee, sent the following telegram on Oct. 22, from Cleveland, to the Chairman of the Board of Grain Commissioners: "Mr. Rathbone's circular to vessel managers of Oct. 19 has been received. Has today been considered by the majority of United States managers, who have authorized me to send you the following message: Your notice that you are prepared to accept as compliance with section 3 of the Inland Water Freight Rates Act of 1923, either (a) the filing with the board of tariffs by vessel owners, or (b) the filing by shippers before loading, of copies of charter or contract for space. The vessel owners here represented will decline to file such tariffs. We can have no objection to the filing by the shippers before loading, of copies or contracts for space, as this, so far as the vessel is concerned, restores and preserves our right of contract and places no obligation on the ship; it would, of course, not affect the reasonableness of the rates, because we assume that before the shipper definitely closes his contract with the vessel he has due approval of the Government. With this understanding we see no objection to United States vessels taking Canadian grain as in previous years. Please confirm."

Canadian Pacific Ocean Steamship Services.

The company will close its St. Lawrence navigation season Nov. 23, with the sailing of the s.s. Montrose for Liverpool.

The company's autumn sailing schedule out of Montreal, which was put into effect Oct. 1, shows 22 arrivals and departures from Montreal and Quebec.

The s.s. Empress of Canada will be given a general overhaul preparatory to making a world cruise, and it is stated that new oil burners will be installed.

The C.P.R. has, it is said, cut out Yokohama, Japan, as a port of call for its trans-Pacific steamship service, and will disembark its passengers for Japan at Kobe.

The C.P.R. ocean steamship trans-Atlantic service for 1923-24 will, it is reported, provide for 40 round voyages to St. John, N.B., against 34 for 1922-23. The first vessel to leave St. John for the season will be the s.s. Montclare, on Dec. 7.

Capt. S. Robinson, who was in command of the s.s. Empress of Australia, in Yokohama harbor, during the earthquake, will, a Montreal press report says, command the s.s. Empress of Canada in her round the world cruise starting from New York in January.

"My heart is with the ocean!" cried the poet, rapturously. "You've gone me one better," said the seasick novelist, as he took a firmer grip on the rail.—Flamingo.

Dominion Marine Association's Executive Committee Meeting.

The Dominion Marine Association's executive committee met in Toronto on Oct. 17, those present being: T. R. Enderby, President; H. B. Clark, W. Crawford, G. J. Madden, A. A. Wright, and the Association's Counsel, Francis King, K.C.

Further consideration was given to the situation arising from the Inland Waters Freight Rates Act and the possibility of failure to move the required amount of the large crop. The meeting concurred in a statement already given to the press by its Counsel, as follows:—"That it was expressed as the opinion of the Association's members that they are complying with the law, that their chief interest is in getting the western crop moved, and that they did not wish to do anything which in any way would embarrass the Government. It was agreed that the situation was still very serious, and the hope was expressed that a blockade will not occur." Further than this, no action was taken.

With reference to the Chicago drainage canal, the President reported interviews in Chicago as to the serious intentions there with reference to further withdrawals, and correspondence was read between the Association and the Railways and Canals Department's Chief Engineer and the Under-Secretary of State for External Affairs. The following resolution was adopted unanimously: "That the Association protests in the most emphatic terms against any compromise with the Chicago Sanitary District in its demand for diversion of water from the Great Lakes in excess of the 4,167 c.f.s. authorized by the U.S. Secretary of War in 1912, and urges upon the Canadian Government the need of more active measures than have been apparent to date, with a view to securing from the U.S. Government enforcement of the existing order of the Federal authorities."

Regarding the drinking water regulations, a letter from the Minister of Health was read stating that the regulations are to be complied with by April 1, 1924, and that they had been adopted only after a conference with representatives of the various companies called by the Department. Instructions were given to reaffirm the statement made at previous meetings that members were not aware of any such conference, or of any consultation or notice prior to the publication of the regulations in the Canada Gazette in June 1923, and inquiry is to be made as to the parties notified of, or present at, the conference.

Consideration was given to the recent accidents in the Lachine Canal, and the time lost in repairs, and also to the recent accident in the Welland Canal, and the comparatively prompt and efficient action taken, and the following resolution was adopted to be forwarded to the Railways and Canals Department:—"That the Dominion Marine Association's executive committee believes that considerable unnecessary delay occurred in freeing the Lachine Canal from obstruction on the occasions of recent accidents when the gates of lock 1 were carried away and when the bridge at Ville St. Pierre fell into the canal, and that greater consideration should have been given to the very urgent need of prompt renewal of navigation, particularly under existing circumstances, and further, that the As-

sociation fears that inadequate provision is made at present on this canal for immediate replacement of any other gates that may be damaged. That it is, in the committee's opinion, very desirable that the fullest investigation should be made as to the cause of the collapse of the bridge mentioned, and as to the condition of similar bridges in operation elsewhere, and that the committee deems it to be its duty, in the interests of navigation, to record its views as above and to communicate them to the Railways and Canals Department in the hope that the paramount importance of maintaining a free channel for navigation will be fully recognized and every possible step taken to prevent further delays."

With reference to the Morrisburg Canal improvements, the committee was advised of the Department's determination not to accept the recommendation for the removal of the head lock further down the canal, and of the intention to make minor improvements by excavating on the northern bank above the entrance. The committee unanimously reaffirmed its recommendation for the removal of the lock, and passed a resolution expressing its doubt as to the efficiency of the proposals being adopted, and directed the resolution to be communicated to the Department.

Consideration was given to the improvements proposed in the Belleville-Prince Edward bridge, and the concurrence of the Association in the plans submitted to the Dominion Public Works Department by the Ontario Highways Department, was confirmed. The navigable passage in each draw of the bridge would be reduced to 70 ft. by the cribwork proposed to strengthen the piers, but the sides of the channel would be clear and straight and the walls vertical.

An arrangement which has been summarized in regard to customs clearings at Port Arthur and Fort William whereby ships will no longer require to repeat the operation each time they move from one of the twin ports to the other in loading cargo, was reported.

Consideration was given to the ice-breaking contract for Thunder Bay now re-let for five years, and it was decided to call attention to the need of express provision for the breaking of ice to permit complete access to, and actual berthing of, the ship at her destination. The contract is to be further considered and necessary representations will be made to the Marine Department.

C. H. Nicholson, Manager, Car Ferries, etc., Central Region, Canadian National Rys., who had been acting on the Association's behalf in an effort to affiliate interests on the Pacific coast, reported his inability at present to bring about any arrangement, largely on account of the great distance and the divergence of interests.

The next meeting of the committee was fixed for Ottawa about the middle of November, and it has been arranged that at that time a conference will be held with the Minister of Marine upon his return from the Pacific coast, in which the Association will be supported by the Shipping Federation of Canada representing ocean tonnage, in the request for legislation at the next parliamentary session to amend the Canada Shipping Act by abolishing the requirement for payment of pilotage dues below Montreal.

Consideration was given to conditions in Montreal harbor and to various other matters, including the Association's annual report, increase in membership, etc.

Canadian Government Merchant Marine Operation, Etc.

Officers of Steamships.—The following have been appointed recently: Captains—Canadian Coaster, J. H. Hubley; Canadian Signaller, G. Borland; Canadian Sower, N. Miller; Canadian Warrior, C. Dineen; Sheba, J. Slater. Chief engineers—Canadian Fisher, J. O. Lamoureux; Canadian Leader, J. Davies; Canadian Miller, C. Robertson; Canadian Otter, C. De Cotret; Canadian Ranger, T. Jones; Canadian Runner, W. Samples; Sheba, P. C. Bennett.

Ships Chartered for Great Lakes Service.—The steamships Canadian Adventurer, Canadian Engineer, Canadian Pathfinder, Canadian Sailor, Canadian Signaller, Canadian Sower, Canadian Trader, and Canadian Warrior, are under charter for service in the great lakes grain trade. We were officially advised recently that no decision had been reached with regard to the utilization of any of the other C.G.M.M. ships in that trade.

Winter Services.—The schedule for the winter comprises fortnightly sailings from St. John, N.B., to London and Antwerp, and to Cardiff and Swansea; fortnightly sailings from Halifax, N.S., to St. Kitts, Antigua, Barbadoes, Trinidad and Demerara; triweekly sailings to Bermuda, Bahamas, Jamaica and British Honduras; fortnightly sailings to St. John's, Nfld., and monthly sailings to Australia and New Zealand. From Vancouver, B.C., there will be monthly sailings to Avonmouth, and to Australia and the Orient, and weekly sailings to San Francisco and intermediate ports.

The s.s. Canadian Settler has been sold to Captain Peter Graham of New Glasgow, N.S., and her name will be changed to Portmore. She was built by Tide-water Shipbuilders, Limited, at Three Rivers, Que., in 1919, her dimensions, etc., being: length 331.3 ft., breadth 46.8 ft., depth 22.9 ft.; gross tonnage 3,548, registered tonnage 2,155; horsepower of engines nominal horsepower 231; screw driven. The builder's contract price was \$200 per ton d.w., and the total cost \$1,020,000.

Montreal Sailings.

London and Antwerp service—Canadian Explorer, Nov. 7; Canadian Ranger, Nov. 21.

Cardiff and Swansea service—Canadian Mariner, Nov. 2; Canadian Commander, Nov. 16; Canadian Leader, Nov. 24.

Australia and New Zealand service—Canadian Cruiser, Nov. 24.

Hamilton, Bermuda; Nassau, Bahamas; Kingston, Jamaica; Belize, British Honduras, service—Canadian Fisher, Nov. 9. St. John's, Nfld., via Charlottetown, P.E.I.—Canadian Sapper, Nov. 5 and 21.

St. Kitts, Antigua, Barbados, Trinidad and Demerara service—Canadian Squatter, Nov. 14; Canadian Otter, Nov. 24.

St. John, N.B., Sailings.

London and Antwerp service—Canadian Conqueror, Dec. 5; Canadian Planter, Dec. 19.

Cardiff and Swansea service—Canadian Victor, Dec. 14; Canadian Mariner, Dec. 28.

Halifax Sailings.

Australia and New Zealand service—Canadian Constructor, Dec. 22.

Hamilton, Bermuda; Nassau, Bahamas; Kingston, Jamaica; Belize British Honduras, service—Canadian Forester, Nov. 29; Canadian Fisher, Dec. 20.

St. Kitts, Antigua, Barbados, Trinidad

and Demerara service—Canadian Runner, Dec. 14; Canadian Carrier, Dec. 28.

Vancouver Sailings.

Australasian service—Auckland-Sydney, Canadian Importer, Dec. 10.

United Kingdom service—For Avonmouth, Canadian Prospector, Nov. 20; Canadian Seigneur, Dec. 20.

Vancouver and San Francisco service—Canadian Rover, Nov. 3.

Oriental service—For Kobe-Shanghai, Canadian Freighter, Nov. 15.

Canada's Shipping Interests Before Imperial Shipping Committee.

A London, Eng., cable of Oct. 17 says the Canadian complaints respecting shipping were laid before the economic conferences and were promised full investigation by Sir Halford Mackinder, Chairman, Imperial Shipping Committee. The complaints were:—That insurance rates charged on the St. Lawrence route are excessive, and that the rates charged by British ships on both Canadian and U.S. flour discriminate in favor of New York as against Canadian ports. Hon. G. P. Graham, Minister of Railways and Canals, in presenting the complaints, pointed out that they were of long standing. The Dominion Government had spent millions of dollars in improving the St. Lawrence waterways, but nothing had been done in the way of giving justice to the country regarding marine insurance. The Canadian Government Merchant Marine was carrying its own insurance, and if something was not done to give justice in the matter, an insurance company would probably be established in Canada to insure the St. Lawrence traffic. Regarding flour rates, he claimed that Canadian millers had either to pay a higher ocean freight rate, if they shipped by Montreal, or to give their business to United States railways. He also referred to the steps being taken to promote the shipment of grain from Vancouver via the Panama Canal.

Canal Traffic Statistics.

The Dominion Bureau of Statistics has issued the following summary of canal statistics for August:—

Sault Ste. Marie.—During August 14,353,090 tons of freight passed through the Canadian and U.S. locks, which was an increase over Aug. 1922 of 4,068,335 tons, or 40%. Iron ore shipments totaled 10,484,858 tons, or 93% of the down-bound traffic, with wheat aggregating 9,602,238 bush., other grains 8,664,377 bush., and flour 1,491,900 barrels. Canadian grain through the canals consisted of 5,912,188 bush. of wheat, 2,584,318 of barley, 1,936,132 of oats, 1,545,952 of rye, and 42,048 of flax, all of which was carried in Canadian ships; 9,408,526 bush. going to Canadian ports and 2,612,112 to United States ports.

Welland.—Traffic aggregated 629,902 tons, which was an increase over 1922 of 30%. The largest increase was in bituminous coal downbound, which totaled 129,360 tons, against 16,803 during August 1922. Wheat and corn shipments decreased, but oats and rye increased.

St. Lawrence.—Traffic increased 25%, owing to increases in barley of 31,009 tons, oats of 18,144, rye of 4,066, anthracite coal of 55,136, and bituminous coal of 94,762, while corn decreased 36,547 tons and pulpwood 17,622. Passenger traffic increased by 5,777 passengers.

Wreck Commissioners' Enquiries and Judgments.

Enquiries have been held and judgments delivered in connection with the following casualties:—

Nevada-Conqueror-Miramichi Collision.

Held at Montreal, Sept. 6 and 7, by Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. J. O. Grey and C. Lapierre, as nautical assessors, into the collision between Nevada Shipping Co's s.s. Nevada and the Sincennes-McNaughton Line's steam tug Conqueror, with its tow barge Selkirk, and the scow Miramichi, Aug. 2, in Soulanges Canal, below St. Feriol bridge. The Nevada was bound from Montreal to Port Colborne, light, and in passing through the canal, the tug Conqueror was seen towing the barge Selkirk, and a one blast signal was given by the Conqueror, and answered by one blast, and the course altered to the right, approaching the north bank to about 40 ft. Capt. Chas. Webber, of the Nevada, testified that he did not notice the Selkirk altering her course, but saw that she sheered twice, the second time coming obliquely towards the Nevada, striking her on the port bow, dinging two plates, and causing her to swerve to starboard, and collide with the scow Miramichi, which was tied to the north bank, considerably damaging her. The Nevada was going about half a mile through the water, her engines were stopped, and she was being steered parallel to the bank, and would have cleared the scow safely. Full speed astern was ordered before she collided with the Miramichi. The captain had left the wheelhouse when he saw the Selkirk swerving, leaving an uncertificated second officer in charge without instructions. Side lights were on, but he did not notice if the Selkirk exhibited hers. The Selkirk appeared to be moving at a moderate speed in the middle of the canal. There was no current, no wind and clear weather, and he attributed the damage entirely to the swerving of the Selkirk. L. Leduc, who was in charge of the Selkirk, stated that he left the wheelhouse and went forward, when he saw the Nevada heading for them. Both ships were in the center of the canal when first seen. He gave a one blast signal to indicate he was taking the right side of the canal, and approached the south bank to within 40 ft. He also gave 3 blasts, thus ordering the Nevada to reduce speed. It was stated that the 3 blast signal was not heard on the Nevada. After some other evidence was given, the court adjourned. At a further hearing, evidence along similar lines was given by Capt. D. Beaudet, of the Conqueror, and the second officer of the Nevada. The court considered the evidence very contradictory, that the distance allowed, taking the positions of the ships as described, was scarcely 20 ft., and that for any ship to attempt to meet another with so little margin of space, showed bad judgment, it being hazardous in the extreme, especially when one ship has a tow. The Nevada's second officer had stated that the engines had been stopped for 10 minutes, and her speed through the water previously to that was 1½ miles. If such was the case, the Nevada was not under command, but the statement was contradicted by the entry in the log, which was looked upon with suspicion, on account of erasures and marginal notes. The engines were said to be going slow and a full speed astern order was given before the shock with the scow was felt by the

engineer, who, as a witness, was non-committal. The court considered that the Nevada should not have been in the position she was, and it was evident that she attempted to sail through between the scow and the Selkirk, passing the Conqueror at a distance of from 7 to 10 ft., therefore, in view of the varied statements made by the Nevada's captain, the admission of the second officer with respect to speed, and the position of the wheel which was to starboard, the suspicious entry in the log and its erasures, and the interpretation of the evidence as to the position of the ship, the court concluded that the Nevada was alone responsible for the damage to her port bow and to the barge Miramichi, and found the master, Capt. Charles Webber, in default, but as it was more due to an error of judgment, than to neglect, indifference or carelessness, his certificate was returned to him, and he was censured and reprimanded. The tug Conqueror and her tow Selkirk were absolved from blame.

Canadian Sapper-Chiquimula Collision.

Held at Pictou, N.S., Sept. 15, by Capt. L. A. Demers, Dominion Wreck Commissioner, and Capt. John Grey and C. W. Mason, as nautical assessors, into the collision between the Canadian Government Merchant Marine's s.s. Canadian Sapper, and the United States schooner Chiquimula, in Northumberland Straits, Aug. 15. The court agreed that both ships contributed to the collision, the former through a lookout which can be considered as lacking in thoroughness, not through carelessness or indifference on the part of Capt. Blouin or Second Officer MacDonald, but, as is presumed, through their attention being rivetted on one object, viz: the shore lights. The lookout on the forecandle head was indifferent. The schooner contributed to the collision through her change in course, such change being admissible only in the agony of the moment, and 4 minutes is not considered as being in the agony. Captain Larson, of the schooner, acted wrongly, and is equally to blame for the collision, and the damage resulting. In view of this, the court did not deal with Captain Blouin's certificate, nor that of Second Officer MacDonald, but reprimanded them severely for a poor lookout, and returned their certificates with a warning. Capt. Larson's license was also returned, as it was not within the court's jurisdiction to deal with it, and the matter was placed in the hands of the U.S. authorities to deal with as they may deem fit.

Grounding of s.s. Imperoyal.

Held at Montreal, Sept. 28, into the grounding of Imperial Oil s.s. Imperoyal, at Bicquette reef, off Bic Island, St. Lawrence River, Sept. 17, by Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. A. Purvis and A. J. Gilbert, as nautical assessors. L. Beauregard appeared for the owners, and B. J. Kaine, Superintendent of Lights, Quebec District, watched the proceedings for the Marine Department. The pilot was not represented. Capt. A. Geddes, of the Imperoyal, stated that he left Quebec, Sept. 16, outward bound, light, on a speed of 10 knots. The two Kelvin compasses were not acting in accordance with the last adjustment, but frequent observations were taken. Full speed was maintained, though the visibility was not

good, being clear overhead, but somewhat hazy, and objects could be seen 1½ miles distant, and farther at times. He was on deck with the mate and pilot when Bic Island light was seen, and the course was immediately altered, but the ship grounded, or touched. Boats were got ready and soundings taken. A cast of the lead, which was reported as uncertain and unreliable, showing 15 fathoms, had been taken, just before the ship touched. Jules Asselin stated that he had been a pilot for 40 years, and had never appeared at a board of enquiry before. He acknowledged that he erred in not giving sufficient alteration to the course when the light was seen. When passing Green Island, he was in the center between Red and Green Islands, and shaped a course according to his usual practice; there was no wind, it was the last of the ebb, and it being neap tides, therefore he did not allow for its velocity. He could not account for the ship being brought towards Bic Island, except by a miscalculation of the strength of the ebb. The ship struck 2½ miles west of the light. The atmospheric conditions did not warrant a reduction of speed, though the telegraph was at stand by. E. Laprise, lighthouse keeper at Bicquette, stated that he was ill at the time, and had reported to headquarters, but notwithstanding, he had, in company with his two men, paid a visit to the light to remedy a little defect, about 1 a.m., when there was no fog. At about 2.30 a.m., his assistant reported fog, and he ordered the fog signal put into operation. The clock had not been regulated and he did not know if it showed correct time; it may have been 10 minutes out. In its report on the accident, the court mentioned the straightforward statement of occurrences by the captain and pilot; it felt that an undue speed was not maintained, and the steering was watched and was satisfactory, but where the court did not appreciate their conduct was that when the light was seen on the starboard bow, an alteration of only 5 points was made, whereas the situation demanded that the light be brought immediately to bear abeam. The captain trusted to the local knowledge of the pilot, whom he had had with him on various occasions, and had always found trustworthy, and he admitted his error in not starboarding more, and bringing the engines to a stop and sounding immediately. The pilot also admitted his error in starboarding so slightly, in view of the bearing of the light, and felt keenly his first mishap. The court therefore agreed unanimously that both captain and pilot committed grave errors of judgment, but owing to their straightforward statements, and the fact that the captain was highly recommended by his employer, and that it was the pilot's first appearance before a court of enquiry, their certificates were not dealt with, but Capt. Geddes was cautioned that, though he may have a pilot with him, he is not relieved of his responsibilities to suggest and even urge a course which prudence directs. Pilot Jules Asselin was reprimanded severely, and cautioned to be careful in future.

Twickenham Collision With a Pier.

Held at Montreal, Sept. 29, by Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. A. Purvis and A. J. Gilbert, as nautical assessors, into the collision of the s.s. Twickenham with the Louise embankment, Quebec harbor,

Sept. 4, damaging her bow and stem, while in charge of a pilot, with 2 tow boats fast to her bow and stem. The court reported that, as was usual and expected, some discrepancies crept up in course of the evidence, especially in that of the master, pilot and third officer. On the whole, however, it did not appear that the ship had been steered properly from the time the ship left anchorage until a few moments before the accident. When in the vicinity of the Louise embankment, with the object of entering the basin, the pilot gave various commands, and when within 100 ft. or more of the end of the pier, and while at slow speed, a cant towards the pier was perceived. A hard to port order was given and obeyed immediately; a tug boat was hauling on the starboard side, another was fastened 100 ft. from the stern, and it was seen that the bow tug hauled at right angles from the ship. It was stated that the captain then ordered full speed astern twice, the last order meaning full movement astern. The pilot stated that he gave that command, and the third officer asserted that the command was given when the ship was within a few feet of the embankment. The contradiction was considered immaterial. The tide was at the end of the ebb and the flood was making, and meantime the St. Charles River was emptying itself into the St. Lawrence, causing the usual eddy at the end of the pier, extending about 100 ft. westward and more. The ship was heading obliquely towards the end

of the pier, and a sheer took place, giving additional strain on the towing hawser, and with the slow speed, and the strength of the eddy, the tow rope parted, and though the engines were put full speed astern, the impact, stem on, was serious enough to damage the stem and both bows. The evidence did not show any negligence or carelessness on anyone's part. The pilot has been in active service for 40 years and has never had an accident; a remarkable record which the court decided to bring to the authorities' attention. He stated that had the towing cable stood the strain, the accident would not have occurred. The question as to whether the oblique direction according to the pilot's version, in view of the state of the tide, was advisable, is doubtful, and the court expressed the opinion that a slight error of judgment was made, and that the ship could have been kept farther away from the influence of the eddy, and headed up for the entrance when it was still water, or with the beginning of the flood, entering the basin with the ship headed westward, and that the pilot acted in good faith, basing his action on past experience. The ship was well manned and equipped, and well steered until she entered the eddy, when she became uncontrollable. The court therefore found Capt. G. E. Huntley blameless for the damages occasioned, but questioned, even though pilotage is not compulsory, his waiving aside the pilot's services after the accident, especially as he did not attach any

blame to the pilot. The tug boats were also exonerated. The pilot, A. Jouvin, erred in judgment, in an excusable manner, in entering the eddy at that stage of the tide, and was therefore cautioned for his future guidance. All others were exonerated and their certificates returned.

North Vancouver Drydock.—Work on the drydock which is being built by Burrard Drydock Co. at North Vancouver, B.C., is proceeding rapidly. One of the pontoons was completed and launched about the end of September, and the building of the others, of which there will be 11, progressed favorably during October. It is anticipated that the first section of the dock will be completed and available for use by the end of the year. This will be about 200 ft. long. The second section of about 300 ft. long will then be proceeded with, and a third section, making a total length of 700 ft., may be added later. An auxiliary pier, 400 ft. long, alongside the dock, where ships can lie waiting their turn in dock, has been completed. The pier, when fully completed, will be about 700 ft. long and 50 ft. wide, and will be built on concrete cylinders, similar to those used in the construction of the Ballantyne pier. It will have a 75-ton sheer leg crane, and a 7-ton portal travelling crane, with a 95-ft. boom, reaching to the center of the dock. Railway tracks will be laid to the end of the pier.

Ships Registered in Canada in July, 1923.

In compiling the following lists of ships registered, steamboats and motor boats operated by engines of less than 10 h.p., are eliminated, as also are sailing ships of less than 100 tons.

Vancouver's Harbor Facilities.

Lt. Col. G. H. Kirkpatrick, President, Vancouver Harbor Commissioners, presented the following statement to the Dominion Government's commissioner enquiring into the grain trade during its recent sittings at Vancouver: Elevator no. 1 is the existing elevator, built some years ago by the Dominion Government and taken over from the Board of Grain Commissioners by the Vancouver Harbor Commissioners on Aug. 1 last. Up to the present, this elevator has had a storage capacity of 1,200,000 bush., and has been equipped with 3 shipping legs. We are adding slightly over 800,000 bush. to the storage capacity, and are increasing the shipping facilities by approximately 100%. The elevator's turnover last year was limited by the shipping side. Under the new arrangements, as mentioned above, we expect to approximately double the shipping capacity. The receiving facilities are ample to cope with the increased shipping facilities. We expect this elevator to be complete, with its alterations and additions, and ready for operation, by approximately Nov. 1. In connection with elevator no. 1, plans have been drawn, and are at Ottawa awaiting approval, for the construction of a quick loading grain jetty for ships taking full cargoes of grain. This jetty will be equipped with 4 conveyor belts, and will berth 2 ships at a time. Construction will commence as soon as the plans are approved, and we expect to complete it in 100 days from the commencement of work. This jetty, together with the elevator's improved shipping facilities, will have the effect, as stated above, of practically doubling the berthing facilities for this elevator.

Elevator no. 2 is a new elevator under construction. It will have a storage capacity of 1,500,000 bush., will be equipped with 6 shipping legs and conveyor belts, and will have a receiving capacity of a minimum of 8 cars an hour, capable of being increased to a minimum of 12 cars an hour. We hope to have this elevator ready for operation about the end of March. In connection with elevator no. 2, the commissioners have prepared plans for a jetty similar to that at elevator no. 1, and as soon as further funds are available, they propose to recommend its immediate construction.

The Ballantyne pier is rapidly nearing completion, and will be equipped with grain conveyors on both sides, connected with elevator no. 2, thus providing four grain berths capable of taking the largest class of ships. This pier should be ready for operation about Nov. 1.

The foregoing development will, we expect, permit us to handle comfortably

50,000,000 bush. of wheat in a season, and possibly, under favorable conditions, 60,000,000. This is without regard to any private elevators which may be built, such as that now under construction by Mr. Woodward. In the case of both of the commissioners' elevators, it will be possible to provide further storage capacity should necessity arise. The works referred to above have been undertaken by the commissioners themselves, but other important works are also under way in the harbor, including, among others, a large and expensive pier about to be built by the C.P.R.

The commissioners have under consideration various other projects, among which is the provision of a special area where private elevators may lease suitable sites on reasonable terms. This area would be selected at some point apart from the congested portion of the waterfront, and would be provided with suitable trackage and waterfront facilities. Apart from such additions or extensions as may become necessary to elevators 1 and 2, it is hoped that private capital will carry on the work of providing the necessary further grain handling facilities, but, of course, should it prove backward, the commissioners will have to consider the advisability of providing further facilities themselves, should it become necessary to do so. There are other projects under consideration which are designed to build up the trade of the port in other directions, such as lumber, fruit, etc., and I wish to point out that all such development tends to bring more ships to the port, which is directly to the benefit of the grain trade.

The commissioners are endeavoring constantly to keep the development of the port abreast of, or a little ahead of, the needs of the port. This is very necessary, if the trade of the port is to grow freely and unhampered by lack of berthing space. It is evident that if the grain trade through this port develops to large proportions, the import trade is also likely to increase extensively. Keeping this in mind, it is clear that in order to properly develop the port for the grain trade, it will be necessary also to provide for an increase in the general cargo imports. As evidence of the necessity for courageous action in anticipating the future, and also as evidence of the growth of the port's commerce, I wish to instance the case of the Ballantyne pier. When work was commenced on it 3 years ago, it was thought in many quarters that its construction was premature, as at that time the existing harbor facilities were not utilized to anything like

their full capacity. Now as the pier, with its half mile of deep water berthage, approaches completion, the need for it is very obvious and the congestion in the harbor is so marked that ships are already using it in its incomplete state, while others are continually being forced to load in the stream.

I wish to corroborate the evidence of the shipping witnesses so far as the harbor records go. These records show a steady and rapid increase in shipping using the port. They also show that this increase is keeping pace with the growth of the cargo tonnage available. The cargo and shipping figures of the port for the first six months of this year, compared with last year, show that there is a steady increase in cargo tonnage and that the additional ships necessary to move it are apparently always available.

Automobile Ferry Boat on Ottawa River.

It is strange that, notwithstanding the increasing use of automobiles, and in spite of the huge sums spent in road building and maintenance, the average automobile ferry remains an antiquated Noah's ark, slow in speed, awkward in manoeuvring, rotten in condition, congested in deck area, and in fact, everything that an automobile ferry should not be. Some ships have a very curious history, if they are investigated, and many a fine and trim one is finishing its days as a coal hulk, or at least it used to be, but now they go one stage further, they become automobile ferries, to the apprehension and despair of the poor auto owner, who has no option but to use it. Who has not had the experience of being hustled and bullied into so backing, filling, and turning his car to suit the whims of the "expert," who packs cars into spaces which look impossible, until one's nerves are on edge, car fenders scraped, and a great deal of time wasted, partly due to waiting one's turn, and in part to the aforesaid packing process. With it all one is charged fares, out of all proportion to the service rendered, or to what it should cost, given proper equipment; for expenses of operation are usually in the inverse ratio of the age of the boat.

An exception to the rule is the steel automobile ferry built recently for the Norway Bay Ferry Co., for service across the Ottawa River between Sand Point, Ont., and Norway Bay, Que., which replaces an antiquated makeshift, which mercifully sank, after causing its owner to fail.

The old ferry was built of wood, to about the same size, carried 5 automobiles at a speed of 6 miles an hour, and was equipped with an old "original" gasoline engine of stationary type. The writer does not know what it cost to operate, but it did not do a great deal of business, as it was a thing to avoid as far as possible. The fuel cost would probably be about 5 to 6c a car mile.

The new ferry is equipped with a semi-Diesel oil engine by Crude Oil Engine Co. of Canada. It is 67½ ft. long by 20 ft. beam by 4½ ft. draft, and carries 8 cars at a speed of 15 miles an hour, at a fuel cost of about ½c a car mile. It is hardly to be wondered that the new service is a success, where the old one was a failure, and the new ferry is at-

tracting a much larger clientele, which shows that if the automobile ferry business was treated as a commercial proposition, and participated in by responsible and business men with proper equipment designed and built for the purpose, and managed with the same degree of regard for the safety and convenience of its patrons as other transportation units are, it would be a profitable venture, even with considerably lower fares than at present in vogue, and instead of being an annoying experience, ferrying would be a break in the monotony of driving and a pleasurable relaxation. There are many excellent roads and routes, built and maintained at much expense, which are largely avoided by the motorist because they entail the use of an expensive and dangerous ferry. It isn't so inconsistent to be against public ownership in general or as a principle, and yet be in favor of a provincial or municipal owned and operated ferry, as it is to have first class roads spoilt for motorists by their connecting links—the ferries.

There are one or two features of interest in connection with this ferry. The location is isolated so far as navigation is concerned, the Chats Falls being just below it. Consequently it was necessary to either build on the spot, with local equipment and labor, or else to transport the hull in sections. The difficulty was eventually overcome by building and completing the hull in Canadian Vickers yard at Montreal, then disconnecting it up the centre line, and shipping it on cars, substantially in two pieces. In this way the longitudinal stiffness of the hull was preserved and the plating was very largely riveted and caulked prior to shipment.

The oil engine of 60 b.h.p., was the first of its kind in the locality, and is a source of much interest to the local shipping fraternity. It is operated successfully by the chief owner's son, who had never seen an oil engine prior to its installation. It may be suggested that for a boat of the above dimensions to attain a speed of 15 miles an hour with an engine of 60 b.h.p. is open to considerable doubt. In fact, even the designer questioned it very dubiously, with the result that the route was surveyed by a government surveyor, and found to be exactly three miles from pier to pier, while the time could not be questioned, being between 11 and 12 minutes, which shows that excessive beam to length does not necessarily jeopardize propulsive efficiency. The boat was not placed in service until the end of July, and will continue running until the end of September or possibly later, each year, but normally the season will commence in the middle of May. It is used in part by the local rural population, and also by tourists and frequenters of the Norway Bay summer hotel. It is also intended that it shall be used for moonlight and other excursions for the hotel guests. It was designed by Walter Lambert, M.I. N.A., Montreal, and built by Canadian Vickers Ltd., Montreal.

Proposed St. Lawrence Waterways Deepening.—The Minister of Public Works, Mr. J. H. King, is reported to have said at Ottawa, Oct. 18, that he did not think the Government or the people were in a position to even consider the project of deepening the St. Lawrence waterways, and they would not be in a position to do so, until it is thoroughly investigated by a board of engineers representing Canadian interests.

Public Works Marine Contracts Awarded.

The Dominion Public Works Department has awarded contracts as follows: Aug. 2, dredging at Lunenburg, N.S., Acadian Contractors Ltd., Halifax, N.S., class A. at \$9 a cu. yd. in situ, class B. at 58c a cu. yd., scow measure; Aug. 27, construction of wharf connecting present Government wharf and eastern breakwater, and construction of protection pile work along present Government wharf, at Matane, Que., to J. R. and J. Elz, Boulanger, Que., at unit prices; Aug. 27, extension to eastern breakwater, at Matane, Que., to J. R. and J. Elz, Boulanger, Que., at \$3.78 a cu. yd. for crib-work complete and stone ballasted; Aug. 31, dredging basin and channel at St. Emilie, Que., to National Dock & Dredging Corporation, Levis, Que., class B., at 39c a cu. yd., scow measure; Aug. 30, repairs to breakwater adjacent to southern shore at Toronto Island, Toronto, to Randolph-Macdonald Co., Toronto, at \$10 a ton of rubble stone; Sept. 4, dredging at Whitby, Ont., to Randolph-Macdonald Co., Toronto, class B., at 65c a cu. yd., place measure; Sept. 4, dredging channel at Mitchell's Bay, Toronto, to Chatham Dredging & General Contracting Co., Chatham, Ont., class B., at 28c a cu. yd., place measure; Sept. 5, overhauling and repairing dredge Fruhling, no. 303, British Columbia dredging fleet, to B.C. Marine Engineers & Shipbuilders Ltd., Vancouver, B.C., for \$15,490 and unit prices; Sept. 5, dredging channel and basin at Pointe Traverse, Ont., to Frontenac Dredging Co., Toronto, class B., at \$1.10 a cu. yd., place measure; Sept. 6, dredging eastern entrance channel, Toronto, to John E. Russell, Toronto, class B., at 56c a cu. yd., scow measure; Sept. 7, plumbing, heating and electric lighting systems in lavatory building at Champlain drydock, Quebec, Que., to Jobin & Paquet, Quebec, for \$8,250; Sept. 7, dredging slips and deepening harbor at Port Arthur, Ont., to Canadian Dredging Co., Midland, Ont., class B., at 35c a cu. yd., place measure, and \$1,500 for deepening harbor and removal of temporary pile breakwater; Sept. 8, dredging Canadian National Rys. slips at Pictou, N.S., to Glasgow Dredging Co., Queensport, N.S., class B., at 70c a cu. yd., scow measure; Sept. 10, dredging in front of Aberdeen elevator, Tiffin, Ont., to W. Birmingham, Kingston, Ont., class B., at 75c a cu. yd., scow measure; Sept. 10, lavatory building at Champlain drydock, Quebec, Que., to Jos. Dorval, Lauzon, Que., for \$10,300; Sept. 10, repairs to wharf at Pointe au Pic, Murray Bay, Que., to E. Methot and N. Fournier, Montmagny, Que., at unit prices; Sept. 12, dredging area on east side of revetment wall, at Hamilton, Ont., to C. S. Boone Dredging & Construction Co., Toronto, at \$10 each for piles; Sept. 12, rebuilding 170 lin. ft. of east pier superstructure, at Cobourg, Ont., to V. T. Bartram, Toronto, at unit prices; Sept. 14, dredging at Canso, N.S., to W. McFatridge, Halifax, N.S., at \$95 a day of 10 working hours, \$5 an hour to be deducted from rental rate for 5 hours or more lost at any one time due to stress of weather; Sept. 17, dredging at Curry's Cove, N.B., to J. A. Gregory, St. John West, N.B., class A. at \$8 a cu. yd., class B. at \$1.10 a cu. yd., barge measure; Sept. 19, dredging channel and basin at Valleyfield, Que., to Les Chantiers Manseau, Sorel, Que., class B., at 49c a cu. yd. in situ.

Canadian Great Lakes Ships' Grain Carrying Capacity.

A Winnipeg paper published a table on October 2, which it stated had been checked by ship owners and agents at Winnipeg, and which showed the Canadian Great Lakes ship wheat carrying capacity from October 1 to the end of navigation for each trip as follows, in bushels: Canada Steamship Lines, 3,600,000; Great Lakes Transportation Co., 2,000,000; Mathews Steamship Co., 1,500,000; Canadian Government Merchant Marine, 880,000; Algoma Central Steamship Co., 800,000; a total of 8,780,000. On the assumption that each ship made a round trip, they would deliver 5,580,000 bush. to Georgian Bay ports and 3,200,000 to Port Colborne, and figuring 3½ trips to bay ports and 3 trips to Port Colborne for October, 3½ trips to bay ports and 3 to Port Colborne for November, and one trip to bay ports and one to Port Colborne for December, it was calculated that 67,040,000 bush. would be handled. Adding to this an assumed quantity of 4,000,000 bush. to be carried direct to Montreal during the period, it was concluded that the total capacity of the Canadian fleet would be 71,040,000 bush. from October 1 to the end of navigation.

Canadian Railway and Marine World's information is that this estimate is probably too low. The table given below contains what we consider a fairly accurate estimate of the Canadian fleet's carrying capacity. We have included several ships which were not in the Winnipeg paper's estimate, have assumed that 4 trips will be made to bay ports in October instead of 3½, as 4 trips should be made with good dispatch, and we have calculated that the smaller ships handling direct from Fort William to Montreal should take nearer 6,000,000 bush. than 4,000,000.

	Bushels.
Canada Steamship Lines.....	3,600,000
Algoma Central Steamship Co.....	800,000
Great Lakes Transportation Co.....	2,000,000
Mathews Steamship Co.....	1,500,000
Canadian Government Merchant Marine	880,000
S.s. Jolly Inez.....	115,000
Geo. Hall Coal Co.....	240,000
S.s. T. J. Drummond.....	105,000
S.s. J. A. McKee.....	110,000
S.s. Turret Court.....	110,000

Total capacity in one trip..... 9,460,000
Assume that in one trip 6,000,000 bush. would go to Bay ports and 3,460,000 to Port Colborne.

4 trips to Bay Ports in October.....	24,000,000
3 trips to Port Colborne in October.....	10,380,000
3½ trips to Bay ports in November.....	21,000,000
3 trips to Port Colborne in November.....	10,380,000
1 trip to Bay ports in December.....	6,000,000
1 trip to Port Colborne in December.....	3,460,000
Add grain carried direct to Montreal by smaller ships not included in above.....	6,000,000

Total carrying capacity in period..... 81,220,000

If to the above be added a one-trip capacity of 680,000 bush., of ships which are not of Canadian registry, but which at the same time are not of U.S. registry and are amenable to Canadian inspection while in the Canadian grain trade (made up as follows: British s.s. John Shaw, 80,000 bush.; British s.s. Belchers, 100,000 bush.; British s.s. North American, 100,000 bush.; British and Norwegian tramp ships now in the trade, aggregating 400,000 bush.; total, 680,000 bush.), the total one trip capacity becomes 10,140,000 bush. instead of 9,460,000. Assuming that 6,450,000 bush. would go to Bay ports and 3,690,000 to Port Colborne for one trip by all ships, and on the basis of the same trip schedule as used above, the total carrying capacity from Oct. 1 to the close of navigation would be 86,655,000 bush.

Welland Canal Lock Gates Accident.

The Bay Line Steamships Ltd. s.s. Poplarbay, loaded with wheat, while downbound on Oct. 11, at 7.45 a.m., collided with the lower gates of lock 10, Welland Canal, east of St. Catharines, carrying them out. The water released from the reach above the lock also carried out both upper gates. The rear slopes of the canal banks at the head of locks 9 and 8, were washed out somewhat, but not extensively. Quite a large area of land was flooded with water on account of the long reach of canal above lock 10, but most of it was canal land, and the damage to private property from flooding was very small. Four spare gates were placed in position at the lock in record time, and the canal was ready for resumption of traffic at 9 p.m. the same evening, but practically no ships, except small motor craft, were able to proceed until the following morning, owing to very dense fog. The estimated cost of repairing damages to government and private property is \$15,000. It is said the ship was damaged somewhat, as she had difficulty in keeping afloat below lock 10. There was some wet grain. After part of the cargo was lightered, she was able to proceed down the canal on October 14. About 10 ships were delayed for varying periods, due to the break.

Proposed Disuse of Welland Canal from Port Dalhousie to Merritton.

It having been stated that, on the completion of the Welland Ship Canal, the portion of the present Welland Canal between Port Dalhousie and Merritton, Ont., would be abandoned, the St. Catharines, Ont., Chamber of Commerce passed a resolution recently that, while aware that public policy would be against its maintenance as a waterway for either navigation or power, and its retention in either capacity would be unwise, they felt that the drying up of the channel would cause risks of accidents to pedestrians and children, pollution by reason of dumping, injury from weed growth, and disfigurement by being an eyesore, and urging on the Railways and Canals Department that a culvert system be arranged, to keep in motion a flow at present levels throughout the present canal, from Merritton to Port Dalhousie,

and that future bridge building in the area be designed to accommodate such a flow under permanent structures; that the Department be responsible for the annual cutting of weeds and cleanliness of the canal bed, and that such staff as is retained be utilized to keep sluices open and regulate the flow. The Railways and Canals Department's Secretary replied that the matter had been fully considered by its engineers, that adequate drainage of the abandoned canal will be provided, that steps will be taken to prevent objectional dumping of refuse therein, and that to obviate the creation of a breeding place for mosquitoes, etc., it will be desirable for the present levels to be lowered as much as possible, otherwise each reach would become a stagnant pool, with the small allowable flow passing through it.

On the abandonment of the portion of the present canal between Port Dalhousie and Merritton, Port Dalhousie will, of course, cease to be the terminus of water traffic between Lakes Erie and Ontario, and its place will be taken by Port Weller, the new Lake Ontario terminus.

Ballantyne Pier at Vancouver Opened.

The Ballantyne pier at Vancouver, B.C., the construction of which was started in 1920, and which is said to be the largest and the most modern on this continent, was formally opened Oct. 8. Lt.-Col. G. H. Kirkpatrick, Chairman Vancouver Harbor Commissioners, presided, the opening ceremony being performed by Hon. Ernest Lapointe, Minister of Marine and Fisheries, Ottawa. Its general dimensions are: length, 1,200 ft. on one side and 1,070 ft. on the other; breadth, 341 ft. It provides berths for 2 oceangoing ships on each side, and when the shore quays are completed, there will be accommodation for 2 more ships. There are 4 sheds on the pier, 3 of them 500 x 110 ft., and one 408 x 110 ft. The contractors are the Northern Construction Co. and Major-General Stewart, the estimated total cost being approximately \$6,000,000. The most modern freight handling devices are provided, and there are 8,000 ft. of railway track, connecting with the harbor commissioners' track, which give connection with all the railway lines entering Vancouver.

The Minister of Marine, in the course of his speech, said:—"I have the deep conviction that the building of this pier

and of the elevator now under construction is only the first step toward providing the port of Vancouver with the terminal facilities which natural conditions and the normal flow of trade will necessitate."

After the speaking, the Canadian Government Merchant Marine s.s. Canadian Winner was placed in her berth, and the spectators were shown the pier equipment in action, loading her with grain for shipment to Liverpool. In the evening the Vancouver Harbor Commissioners gave a dinner in honor of the event.

Hay Carried Twice Across the Atlantic and Then Thrown Overboard.

A strange story of a steamship, 740 bales of pressed hay, and government red tape has been related in Montreal. Shorn of details, the story is that a consignment of 740 bales of pressed hay was loaded on a steamship for London, where she was unable to discharge it owing to labor trouble, and she went on to Antwerp, where the hay was unloaded, picked up another cargo, and left for Canada. On her next trip to Antwerp, the hay was loaded on here again, and taken to London, where government red tape regulations stepped in, refusing to permit the hay to be landed, owing to the fact that there was foot and mouth disease on the continent, and the hay having been for some time in Antwerp, might have become tainted. The hay was then taken back to Montreal, where, under the Dominion Government regulations, it was refused a landing, and the ship underwent a thorough fumigation. The steamship has taken the hay out of Montreal again, and on reaching somewhere in the ocean. it will be thrown overboard. Why should it not have been burned?

Ships Under 200 Tons Cannot Carry Export Alcoholic Beverages.

The following Dominion order in council, 1794, was passed Sept. 12. The Governor General in council, on the recommendation of the Minister of Customs and Excise, and under and by virtue of the powers in that behalf conferred on the Governor General in council by the Customs Act, R.S.C. 1906, chap. 48, sec. 81, and the Inland Revenue Act, R. S. C. 1906, chap. 51, sec. 140, or otherwise vested in the Governor General in council, is pleased to make the following regulation, and the same is hereby made and prescribed accordingly: No intoxicating liquors imported into Canada and no intoxicating liquors subject to duties of excise and on which such duties of excise have not been paid, may be exported from Canada in bond in any vessel under the burden of 200 tons gross registered tonnage.

The Ship S. F. Tolmie Ltd. has been incorporated under the British Columbia Companies Act, with \$150,000 authorized capital, and office at Vancouver, to buy the sailing ship S. F. Tolmie, and carry on a general shipowning and shipping business. As mentioned in our last issue, the S. F. Tolmie was sold by the Dominion Government to The Hastings Mills Ltd. for operation in that company's lumber business. Since she was taken over by the Government from the building company, on its bankruptcy, she has been operated by Canadian Government Merchant Marine.

Sault Ste. Marie Canals Traffic.

The following commerce passed through the Sault Ste. Marie Canals during September:

Articles	Canadian Canal	U.S. Canal	Total
Lumber	7,069	23,341	30,410

Mainly About Marine People.

Capt. James Buchanan, Cleveland, Ohio, master of the s.s. Luzon, the stranding of which is referred to on another page, suffered a paralytic stroke and was removed to the McKellar General Hospital, Fort William, Ont., on Oct. 8, where he died Oct. 12, without regaining consciousness. He was 59 years of age, and had sailed on the Great Lakes for 41 years.

Capt. G. C. Evans, O.B.E., was presented with a silver tea and coffee service at Liverpool, Eng., recently, by Capt. Henry Parry of the C.P.R. s.s. Montrose, on behalf of the staff, on his retirement from C.P.R. steamship service after 48 years of active life at sea.

Capt. Robert D. Foote, formerly ranking captain of the Northern Navigation Co.'s fleet, who died at Fergus, Ont., Oct. 15, aged 72, was one of the best known mariners on the Great Lakes. Born at Fergus, May 1, 1851, he began sailing the lakes at the age of 17, and in 1884 was appointed to command the Great Northwestern Transit Co.'s s.s. Atlantic. He remained with that company until it was absorbed by the Northern Navigation Co., and subsequently commanded the latter company's steamships Atlantic, Pacific, Germanic, Majestic, City of Collingwood, Huronic, Hamonic and Noronic. He resigned from his last command in 1918, but remained with the company as relief captain, and maintained close touch with lake navigation. He stayed in Sarnia from 1918 until last spring, when he removed to Fergus. During his 55 years' service, he never got into serious difficulty with any of the ships under his command, and never lost a passenger. **Capt. J. B. Foote**, of the Toronto Insurance and Vessel Agency; **Capt. Jas. N. Foote**, of the Great Lakes Transportation Co.'s s.s. Glencova, and **Arthur Foote**, Superintendent, Canadian Dredging Co., Toronto, and formerly with the Port Arthur Shipbuilding Co., Port Arthur, Ont., are nephews.

Lieut.-Col. Francois Gourdeau, who was Deputy Minister of Marine from 1896 to 1908, died at Ottawa, Oct. 1, after a long illness. He was born in Quebec in 1846. Prior to entering the Dominion Government service, he was connected with Quebec Trinity House, which was responsible for the examination of pilots and the investigation of marine casualties. It consisted of 5 members, and was abolished in 1870. In 1872 he was appointed private secretary to Hon. Peter Mitchell, the first Minister of Marine, and was later transferred to the Dominion Government's Accountancy Department. He was made an officer of the Legion of Honor in 1905, when he acted as Canadian Commissioner to the Paris Exposition.

F. E. Hook, Port Superintendent Engineer, Canadian Pacific Railway Agency (Belgium), Antwerp, was presented with a silver tray and address by his colleagues and other friends recently on retiring. He joined the C.P.R. service as Chief Engineer of the s.s. Milwaukee in 1903, after 23 years' service with the Elder Dempster Co., and was subsequently Assistant Superintendent Engineer at London, going to Antwerp after the close of the war.

John Laxton, Superintendent, Consumers Gas Co., and one of the Toronto Harbor Commissioners, who died in Toronto Aug. 15, left an estate valued at \$281,805.

Richard Lewis, storekeeper on the

C.P.R. s.s. Montclare, died suddenly in a house on Craig St. West, Montreal, Oct. 12, aged 45.

Dr. W. L. McDougald, President Montreal Harbor Commission, addressed the Canadian Association of British Manufacturers, meeting in Montreal, Oct. 4, on "Transportation from the angle of increasing British trade with Canada."

W. L. McDougald, President, Montreal Harbor Commission, has resigned from the British Empire Steel Corporation's directorate.

Captain D. Murdock, who died at Coldwater, Ont., Oct. 2, aged 91, was a native of Scotland, and followed the sea for many years, making his first call at a Canadian port about 65 years ago. After some service in the United States navy, he retired and came to Canada, and lived principally in Toronto and Belleville.

J. W. Norcross, Vice President Canada Steamship Lines, returned to Montreal Oct. 17, from New York, where he is reported to have met Dr. Cuno, of the Hamburg-America Line, and discussed trans-Atlantic shipping plans.

Arthur O'Brien, Chief Steward of the Boston & Yarmouth Steamship Co.'s s.s. Prince George, retired from active service at the beginning of October, after 17 years with the company.

Capt. S. Robinson, R.N.R., commander of the C.P.R. s.s. Empress of Australia, and who did excellent work during the recent disaster at Yokohama, Japan, was the guest of the Vancouver Board of Trade at dinner at the end of September. The Vancouver Harbor Commission gave him a silver mounted walking stick. **E. W. Beatty**, K.C., President C.P.R., was also present.

G. W. Stephens, formerly Chairman, Montreal Harbor Commission, who has been appointed a member of the Saar Valley Commission, under the League of Nations, sailed from Montreal, Oct. 1, for Europe, to take up his new duties. Prior to his departure, he was entertained at dinner by the Montreal Harbor Commissioners on their steam yacht Bethalma.

Atlantic and Pacific Oceans.

A Moscow, Russia, press cable of Oct. 14 states that an agreement has been entered into between the Canadian Pacific Steamships Ltd., the Cunard Line and the Holland-America Line and the Russian Volunteer fleet, for emigrant business to America.

The White Star s.s. Canopic will inaugurate the White Star and American Lines' joint service between Hamburg, Germany; Southampton, England; Cherbourg, France, and Halifax, N.S. The service will be maintained by the Canopic, Pittsburgh, Mongolia and Minnekha.

Furness-Withy & Co.'s steamships operating between England and British Columbia, are reported to be cutting off 5 days on the scheduled steaming time. The London Shipper was the first steamer to reach the Pacific coast, under the new schedule. She left on Oct. 25 on her return voyage.

The oil tanker Gedenia, while en route from Mexico to Montreal with oil, ran aground near Port Hastings, Canso Strait, N.S., Oct. 10, in a dense fog. An unsuccessful attempt was made to pull

her off by the s.s. Imperoyal. The s.s. Mina Brea was used subsequently to lighten her, and the Lord Strathcona also rendered aid. She was taken to Montreal for repairs.

The Norwegian s.s. Mirjam, which was wrecked on Black Ledge, Mud Island, Sept. 23, during a fog, while on a voyage from Portland, Me., has been condemned by the underwriters. Salvage operations of the fittings were reported to have started Oct. 6. A St. John Drydock & Shipbuilding Co.'s representative is reported to have been investigating the possibilities of refloating her.

The salvage tug Ocean Eagle, towing the tug Ballindalloch, both owned by the St. John Drydock & Shipbuilding Co., from Southampton, England, to St. John, N.B., met with severe weather about 200 miles west of the Irish coast, and had to put back into Queenstown on Sept. 23. After repairs had been made, they left Queenstown Sept. 28, but meeting again with severe weather, they were forced into St. John's, Nfld., on Oct. 12, through shortage of coal. They reached St. John, N.B., safely a few days later.

Maritime Provinces and Newfoundland.

The Dominion Public Works Department received tenders to Oct. 22, for dredging at the deep water berths and the Canadian National Rys.' long wharf at St. John, N.B.

Plans and specifications for Partridge Island breakwater, St. John, N.B., are reported to have been completed at Ottawa, and it is said that tenders for the work will be invited at an early date.

Full particulars of the damage done to ships on the Atlantic coast by the hurricane of Oct. 1 are given on an earlier page of this issue, under "Extensive Damage by Hurricane on Land and Sea."

The s.s. Seal is in the St. John's, Nfld., drydock undergoing repairs, including the replacement of a number of plates damaged during the last sealing season, and the fixing of a new propeller and shaft.

The Newfoundland schooner Freedom arrived at her destination, at Carbonnear, Nfld., Oct. 18, after being missing for 27 days. Capt. Noseworthy had his wife and their two young children on board with him.

The crew of the schooner Mary O'Connor, formerly the cruising yacht Chanticleer, owned in New York, entered suit recently in the Admiralty Court at Halifax, N.S., to recover wages amounting to about \$7,000. The schooner is lying at Brookfield's wharf, Halifax.

The Red Cross Line is reported to have put in force its winter rate of \$35 from St. John's, Nfld., to Halifax, N.S., and \$65 from St. John's to New York. The rate on the Canada Steamship Lines s.s. Manoa, from St. John's to Montreal, is reported to have been reduced to \$70.

The fishing smack, Margaret Grey, sank off Flat Point, near North Sydney, N.S., Oct. 16, owing to the explosion of the gasoline tank. Her stern was blown 25 ft. into the air, carrying one of the crew with it. He was rescued, and the crew arrived at Point Aucoin, Oct. 17, in a small boat.

The Revillon Bros.' auxiliary schooner, Jean Revillon, arrived in St. John's, Nfld., Oct. 8, from Hudson Bay, having been on a supply trip. She left subsequently for Liverpool, N.S., where she

will winter. She was built at Shelbourne, N.S., specially for this trade, and this was her first voyage.

Five steamships loaded at Charlottetown, P.E.I., in October, with certified seed potatoes for the southern states, U.S.A., the purchases having been made by the Southern Produce Association, Norfolk, Va. It is expected that the total export from the Island this year will be 180,000 bush.

The French s.s. Yport, 506 tons, was reported ashore on Scatterie Island, off the Cape Breton coast, Oct. 1, and was stated to be a total loss, the crew being saved. She sailed from Sydney, N.S., early in August, with 20,000 cases of spirits for southern points, and called at Halifax to bunker.

The St. John, N.B., ferry is reported to have carried in September 129,733 passengers and 8,193 teams, against 127,972 passengers and 7,914 teams in Sept. 1922; while the passenger revenue was \$2,009.57, and the team revenue \$745.95, against \$1,935.34 from passengers and \$692.83 from teams for Sept. 1922.

In connection with the loading of 25,000 barrels of Nova Scotia apples on the Atlantic Transport Co.'s s.s. Minnewaska, at Halifax, Oct. 15, A. G. Jones & Co., the company's general agents, entertained representatives of the Annapolis Valley shippers at luncheon on board the ship. F. J. Comeau, General Freight and Passenger Agent, Dominion Atlantic Ry., was also a guest.

Mr. Justice Rogers, sitting in the Admiralty Court at Halifax, N.S., Oct. 12, directed that the s.s. Mary Smith be sold and the proceeds paid into court. There are claims for wages and for a second mortgage, and the court heard arguments as to priority of claims on Oct. 23. The ship was in trouble some time ago in connection with an alcoholic beverages landing episode at Dartmouth, N.S.

The s.s. Petrel, owned by Labrador Goldfields Ltd., was sold by the sheriff at Halifax, N.S., Sept. 30, for \$701, to H. C. Bellew, Montreal, President of that company, to satisfy a judgment for wages. It is stated that she was bought in the interests of the shareholders, and will be taken to Montreal for general overhauling preparatory to being placed on the Great Lakes. She was owned formerly by the Dominion Marine Department and was built at Owen Sound, in 1892, is screw driven by engine of 50 h.p. and has the following dimensions: length 116 ft., breadth 22 ft., depth 10.3 ft.; tonnage 192 gross, 98 net.

The automatic radio beacon which the Marine Department has established at Cape Ray, Nfld., at the entrance to the Gulf of St. Lawrence, transmits on a wave length of 1,000 meters with a 500 spark frequency. The characteristic is a series of groups of 3 dashes transmitted for 60 seconds, followed by a 4-minute silence. Each individual group of 3 dashes occupies 3 seconds, with 1 second interval between the group. The station is in operation continuously during thick or foggy weather, and there are also 2 routine transmissions daily for test purposes. The transmitting range is approximately 50 miles. Masters of ships which are equipped to receive these signals, are requested to listen in when in the vicinity of the station and report results to the radio inspectors at H.M.C. dockyard, Halifax; Marine Department, Montreal, or St. John; or direct to the Radio Director, Marine Department, Ottawa.

The Dominion Government s.s. Aberdeen ran aground on Devil's Limb Ledge, Seal Island, N.B., Oct. 14, and was reported to be hard aground and full of water. It is feared that she will be a total loss. She left Yarmouth, N.S., on the morning of Oct. 13 for the Cape Sable light, on an inspection trip, and is reported to have got out of her course during a dense fog, and got into the breakers before her position was discovered. She went aground and began to make water fast. A wireless call was sent out for assistance, and the Dominion Government's steamships Laurentian, Arleux and Acadia arrived at different times during the night of Oct. 13. The Arleux rescued the crew, and all movable property was removed to the Laurentian. There may be a possibility of saving the vessel. The Aberdeen was built at Paisley, Scotland, in 1894, her dimensions being: length, 180 ft.; breadth, 31.6 ft.; depth, 16.9 ft.; gross tonnage, 674; registered tonnage, 274. She is fitted with engines of 200 h.p., and is screw driven.

Province of Quebec.

Lachine Canal shipments during September included 14,317,422 bush. of grain, against 14,013,958 in Sept. 1922.

Approximately 6,000 tons of Scottish anthracite coal reached Montreal, Oct. 15, on the s.s. Sheaf Mead from Glasgow.

The Dominion Government s.s. Montcalm left Quebec, Oct. 20, with winter supplies for the river and gulf light-houses.

A large painting of Paul de Chomedey de Maisonneuve, the first governor and founder of Montreal, originally named Ville Marie, has been hung in Canada Steamship Lines' s.s. Montreal, at the head of the main stairway.

Capt. L. A. Demers, Dominion Wreck Commissioner, opened an investigation at Montreal, Oct. 15, into the carrying away of the gates of Lachine Canal no. 1 lock, Aug. 29, when a number of lake and ocean ships were damaged owing to the rush of water.

The Quebec Harbor Commission is reported to have let contracts to the Linde Canadian Refrigeration Co., Montreal, and to T. E. Rosseau, Ltd., Quebec, for supplying the materials and constructing a cold storage warehouse, power plant and fish storage house.

The s.s. Ethelfreda is reported to have loaded 275,000 bush. of Manitoba wheat at Montreal in 11 working hours, before sailing for Plymouth, Eng., Oct. 16. The previous record is said to have been made by the s.s. Clearpool, which loaded 240,000 bush. in 10½ working hours in 1922.

The s.s. Mincio, which lost her anchor and chain shortly after sailing from Montreal, at the end of September, was later reported to be adrift with damaged steering gear about 20 miles off the Magdalen Islands. She was towed by the s.s. Comino to Sydney, N.S., for repairs.

The depth of water in the St. Lawrence River at Cap a la Roche, Que., Oct. 17, was reported to be 23.9 ft. at low water, and 26.9 ft. at high water, about 18 in. lower than last year's minimum. As a result, oceangoing ships are not able to complete loading at Montreal, and are completing it at Quebec.

The Canada Steamship Lines' s.s. Richelieu, which grounded at Grondines recently during a fog, and was towed off, was given temporary repairs at Montreal, prior to resuming her regular

service. It is expected that she will be put in drydock for permanent repairs at the close of navigation.

The Quebec Harbor Commission reports that during September, 50 ocean-going ships stopped at the port, of which 29 were passenger ships and 21 ocean freighters, having a combined tonnage of 317,615. In the coasting trade, 29 ships of 25,637 tons used the port, including grain-laden ships from the upper lakes.

The pilot boat Jalobert, stationed at Father Point, Que., for transferring pilots to and from ships, became disabled owing to a machinery breakdown, and was towed into Quebec Oct. 10, by the Dominion Government s.s. Druid. While she is undergoing repairs, the Dominion Government s.s. Loos is acting as pilot tender.

Judgment was given against Canada Steamship Lines by Chief Justice Francois Lemieux, in the Quebec Superior Court, Oct. 5, for \$20,000, in favor of the Municipal Debentures Corporation, out of an original claim of \$101,003, for commission, etc., in connection with the handling of \$3,609,200 of bonds, part of a total issue of \$6,000,000.

A German firm has entered action in the Quebec Superior Court against Auger & Sons, Quebec, to recover \$10,136.64, for loss of goods. Soon after navigation to Montreal was opened last spring, the s.s. Beluchistan went ashore near Quebec bridge, and some freight was transferred to Auger & Sons' lighter, which sank near Levis, the cargo being lost.

The new grain elevator at Windmill Point, Montreal, which at the time of writing (Oct. 20) is expected to be ready for operation by Oct. 31, has a capacity of 1,300,000 bush., and will bring the total elevator capacity at Windmill Point up to 3,500,000 bush. The Montreal Harbor Commission's two elevators have a capacity of 6,662,000 bush., so that the total elevator capacity of the port will be in excess of 10,000,000 bush.

The 900-ton counterweight attached to the short arm of the bascule span over the Lachine Canal at Ville St. Pierre, Que., broke away from its bearings, Oct. 4, crashing to the roadway, and letting the span fall 7 ft. to the canal bank. Without the counterweight the span could not be moved, and traffic was blocked. The engineering staff at once set to work to get the span moved, and by arrangement with the C.P.R., it was hauled straight south under the direction of F. P. Sherwood, Chief Engineer, Dominion Bridge Co. About 80 ft. of the width of the canal had been cleared of the obstruction to navigation and vessels were permitted to move on Oct. 8 during daylight.

Ontario and Great Lakes.

The Boone Dredging Co. commenced dredging operations in Collingwood harbor, Sept. 28.

New gates are reported to have been installed at the head locks on the St. Lawrence Canal east of Prescott, Ont.

The United States s.s. F. G. Hartwell cleared from Fort William, Ont., Oct. 15, with 480,000 bush. of wheat, the largest cargo for this season.

The water in Welland Canal was, on Oct. 16, reported to be 1 ft. below the required depth. This, together with some small breaks, had interfered with ships' movements.

Ships reaching Sault Ste. Marie and Fort William between Oct. 8 and 12,

reported heavy smoke clouds over portions of Lake Superior, making navigation difficult.

The Dominion Public Works Department has given the Port Arthur Construction Co., Toronto, a contract for the reconstruction of the south pier at Burlington Channel, Ont.

The Dominion Public Works Department has given a contract for building a storage annex to the Dominion Government elevator at Port Colborne, Ont., to E. G. M. Cape & Co., Montreal.

The Public Works Department's Chief Engineer at Ottawa is preparing plans and specifications for improvements at Port Stanley, including a pier, for which Parliament provided \$50,000 at its last session.

The Dominion Public Works Department will receive tenders to Nov. 2, for the reconstruction of a 40 x 80 ft. floating wharf, with 3 new 16 x 16 ft. approach panels, at Frasers Landing, Kootenay Lake, B.C.

The s.s. Interoro, owned by Southgate Marine Corporation, Norfolk, va., formerly in the frozen meat trade between South American and United States ports, arrived at Port Arthur, Oct. 13, to enter the grain-carrying trade.

The Canada Steamship Lines' package freighter Maplebrook, en route from Fort William, Ont., to Montreal, went ashore on Oct. 16 about a mile west of Dickenson's Landing, near Prescott, Ont. She was lightered and released.

The Eastern Steamship Co.'s s.s. Watkins F. Nesbitt arrived at Montreal, Sept. 29, being 23 days out from Liverpool, due to heavy gales and head winds, which she encountered all the way, after rounding the north of Ireland.

The Hamilton city board of control has expressed itself in favor of continuing to make a grant to the Hamilton Harbor Commission, in lieu of that body charging harbor dues. The grant for 1923 was \$4,000, and it is expected that the same will be appropriated for 1924.

The Dominion Public Works Department has given Canadian Dredging Co., Midland, Ont., a contract for the construction of a section of rubble mound breakwater at Port Arthur, a full description of which was given in Canadian Railway and Marine World for October, pg. 509.

The Great Lakes Harbor Association was formed at a meeting in Milwaukee, Wis., Oct. 19, W. G. Bruce, Milwaukee, being President; Mayor Maguire, Toronto, First Vice President; D. L. White, Midland, Ont., Fourth Vice President; Comptrollers J. Gibbons and W. W. Hiltz, Toronto, being among the directors.

An enquiry is being conducted into the strange disappearance of Terence Murray, second mate of the Bay Steamship Co.'s s.s. Beachbay, who went on duty on Sept. 21 at 7 a.m., while the ship was passing Coteau Lake, and has not been seen since. He is 53 years old, was born at Elgin, Ont., and lived for some years at Kingston.

The s.s. Berryton, owned by Mathews Steamship Co., Toronto, and the s.s. Bennington, owned by D. Sullivan Co., Chicago, Ill., collided head on in the Detroit River, near the foot of Ouellette St., Detroit, Mich., Sept. 29. The Bennington was towed to a Detroit dock by another freighter, the Berryton proceeding on her trip to Port Arthur.

The Detroit & Cleveland Navigation Co., which is building two steamships,

the Greater Detroit and the Greater Buffalo, for its Buffalo-Cleveland-Detroit route, will next season place the steamships now on that present route, on a new route between Detroit and Chicago, calling at Mackinac Island. They will be operated on a 36-hour schedule.

The Cleveland Cliffs Iron Co.'s s.s. Luzon, which left Port Arthur, Ont., Oct. 7, for Buffalo, N.Y., with 200,000 bush. of wheat, ran ashore on Passage Island that night during a fog, which was intensified by smoke from forest fires. A tug and lighter were sent, and as she was not in a dangerous position, she was got off and proceeded on her trip.

The s.s. Turbinia, which was built for the Toronto-Hamilton run, which left Toronto in the summer of 1918 for special war service overseas, and which returned to Canada in 1920, since when she has been lying at Sorel, Que., was brought to Toronto by two tugs, arriving Oct. 3. It is stated she will be reconditioned and put back on her old route next year.

The United States Lake Survey reports the mean stages of the Great Lakes for September, in feet above mean sea level, as follows:—Superior, 602.10; Michigan and Huron, 579.64; St. Clair, 574.49; Erie, 571.55; Ontario, 245.03. Compared with the average September levels for the past 10 years, Superior was 0.66 ft. below; Michigan and Huron, 1.09 ft. below; Erie, 0.94 ft. below; Ontario, 1.16 ft. below.

The Hamilton Harbor Commission's chairman submitted to the Hamilton Chamber of Commerce directors on Oct. 16, the commission's proposals for the improvement of the harbor. They include a municipal dock to be served by a siding from the Canadian National Rys., and the building of a warehouse in the rear of the revetment wall. The directors endorsed the proposals, and decided to ask the Dominion Government to consider them favorably.

The Marine Department is placing 3 metering buoys, small kegs, 200 ft. apart, and about 1,000 ft. upstream from Iroquois Point, in the St. Lawrence River, and extending directly across the river in the direction of Tilden on the U.S. shore. These buoys will be in place between 1 and 6 p.m. daily, and as they are not connected in any way, may be passed on either side. Ship navigators are requested to interfere as little as possible with these buoys.

The s.s. Pabjune, owned by Mapes-Ferdon Steamship Co., Montreal, which went ashore on Ogden Island, St. Lawrence River, 20 miles below Prescott, Ont., after being lightered of 22,000 bush., was released from a rather serious and difficult position on Sept. 30, by the Reid Towing & Wrecking Co. She was considerably damaged, but with air compressors to keep down the water, she proceeded to Montreal, where, after discharging the balance of her cargo, she was put on drydock for examination.

As a result of dredging, the anchorage and manoeuvring area below the locks in the St. Mary River, an additional 200 ft. in width has already been obtained. Dredging to remove portions of shoals to a minimum depth of 22 ft. at the upper entrance to Hay Lake channel and Bayfield Rock Course, was discontinued Aug. 25. The result has been the securing of a 22 ft. depth through the greater portion of the southern half of the channel, on Bayfield rock course, and for about 350 ft. in width at the upper end of Little Rapids cut.

The Minnesota-Atlantic Transit Co.'s Diesel-electric ship, Twin Ports, made

her maiden voyage between Ashtabula, Ohio, and New York, via the Welland and Erie Canals and the Hudson River, during September. She has a total cargo capacity of 2,600 tons, of which 600 tons is refrigerator space. Her dimensions are: length 258 ft., breadth 42 ft. She has been built expressly for canal and coastwise service. She is equipped with 250 h.p. d.c. motors, supplied from two 250 k.w. generators, operated directly by 2 Lombard-Diesel engines, for a speed of 13 miles an hour in deep water. A sister ship, to be named Twin Cities, will be ready for service shortly. During the winter the ships will be run between New York, southern ports and the West Indies.

Mathews Steamship Co.'s s.s. Huronton, upbound, was struck and sunk in St. Mary's River on Oct. 11, during a heavy fog, by the s.s. Cetus, owned by Interlake Steamship Co., Cleveland, Ohio, which was downbound with ore. The Cetus' stern was badly twisted. After picking up the Huronton's crew, she went down the bay and into the upper St. Mary's River, anchoring above Big Point. Captain Beatty and the Huronton's crew arrived at Sault Ste. Marie on Oct. 12, on the tug Iowa, reporting that the Huronton was struck amidships and sank in 18 minutes. The Huronton was built at Loraine, Ohio, in 1898, her dimensions, etc., being: length 238 ft., breadth 42 ft., depth 22.4 ft.; gross tonnage 2,072, registered tonnage 1,242; horsepower of engines and mode of propulsion, 127, sc.

Canada Steamship Lines' s.s. Turbinia was towed into Toronto harbor, Oct. 1, where, it is stated, she will be thoroughly overhauled and renovated for replacing in the Toronto-Hamilton service next spring. She was built at Hebburn-on-Tyne, Eng., in 1904, and was among the earlier of the turbine driven ships, and probably the first to be built for Great Lakes service. She was built by the Turbine Steamship Co., controlled by the T. Eaton Co., Toronto, and later passed to Canadian Northern Ry. ownership, and finally to Canada Steamship Lines Ltd. During the war, she was utilized for carrying troops, etc., chiefly across the English Channel, between Dover and Boulogne and Southampton and Havre. For some time her headquarters were at Falmouth, Eng. She returned to Canada in 1920, and for two years was laid up at Sorel, Que., afterwards being taken to Quebec, then to Ogdensburg, N.Y., where her hull was cleaned, and finally to Toronto.

Manitoba, Saskatchewan, Alberta and Northwest Territories.

The Hudson's Bay Co.'s s.s. Athabasca River is reported to have been laid up for the winter at Fort McMurray, Alta.

The Northland Transportation Co.'s s.s. Northland Echo has arrived at Waterways, Alta., from northern points and has gone into winter quarters.

The Alberta & Arctic Transportation Co.'s s.s. Slave River has arrived at Waterways, Alta., from Great Slave Lake, and gone into winter quarters.

The Alberta & Arctic Transportation Co.'s motorboats Canadusa and Rallim arrived at the head of navigation at Waterways, Alta., on the Clearwater River, from the Slave Lake and other points north, Oct. 6, bringing out the crews of boats laid up in the north.

The Dominion Marine Department's Hydrographic Service Department has completed a topographical survey of the

entire river system, from McMurray, Alta., north to the Arctic coast.

The Manitoba Pulp & Paper Co.'s tug, Archibald, collided head on with the Northern Fish Co.'s tug Guest in the Red River about 8 miles from Selkirk, Man., Oct. 5, during a fog. An explosion in the Guest's engine room resulted, causing the death of two men.

British Columbia and Pacific Coast.

The steamboat Whitehorse left Dawson, Yukon, Oct. 12, for Whitehorse, closing the navigation season.

The Victoria, B.C., Chamber of Commerce has completed a list of the 21 lines, coastal and oceangoing, whose ships call regularly at that port.

The name of the scow R. F. No. 8, Vancouver, B.C., official number 150,520, owned by Thos. G. McBride & Co., Vancouver, has been changed to McB. No. 5.

The tug Peggy McNeill, of Vancouver, capsized in Porter Pass, near Ladysmith, B.C., towards the end of September, 5 of the crew being lost, the mate being the only survivor.

During September, 72,922 bush. of wheat were shipped from Vancouver, through the Dominion Government elevator, in 4 ships, all destined for the United Kingdom.

Vancouver Merchants Exchange is reported to have estimated that about 3,850,000 bush. of grain left there in October for the United Kingdom and the Orient.

The Pacific Tow & Barge Co.'s steam barge Peggy McNeill, of Vancouver, capsized in Porlier Pass, off the east coast of Vancouver Island, at the end of September, and 5 of the crew were reported missing.

The tug Czar, of the Greer, Christie Co.'s fleet, Vancouver, went ashore in Margaret Bay, Smith Inlet, Oct. 11, but was refloated. She is a new boat, 75 ft. long, and had only been in operation about a month.

The Alert Towing Co. has been incorporated under the British Columbia Companies Act, with an authorized capital of \$10,000 and offices in Vancouver, to carry on a general towing, lighterage, transportation and agency business.

The Canadian National Rys. will, a Victoria press report states, ask tenders shortly for building an additional steamship for the coast service. It is stated that the ship will be similar in type to the Prince Rupert, but about 30 ft. longer.

The Canadian National Rys.' s.s. Prince George and Prince Rupert will maintain a semi-weekly service between Vancouver and Prince Rupert and way ports during the autumn. The Prince George made the first sailing on the new schedule, Oct. 1.

The C.P.R. coast s.s. Charmer, outward bound for Powell River, B.C., collided, on Oct. 11, with the Norwegian motorship Theodore Roosevelt, which was lying in English Bay fogbound. The latter ship received some damage to the plates above waterline. The Charmer was undamaged.

The Hudson's Bay Co.'s schooner Lady Kindersley has returned to Vancouver from a trip to the most northerly of the company's posts in the Arctic. She penetrated to Prince Albert Sound, 1,200 miles east of Point Barrow, Alaska's most northerly cape, and established a trading post there.

The Grand Trunk Pacific Coast Steam-

ship Co.'s autumn schedule, effective from Oct. 1, shows the steamships Prince George and Prince Rupert on a weekly service between Vancouver and Prince Rupert, and the s.s. Prince John on a fortnightly service to Prince Rupert and Queen Charlotte Islands.

A signal, made of boiler plate about 2 ft. square, has been placed on the top of the draw bridge, over the Fraser River at New Westminster, which will be displayed when the bridge happens to be out of use. When the swing span cannot be opened, the signal will be raised about 8 ft. above the bridge steel, and at night will show a red light.

Wireless news bulletins are sent each Tuesday, Thursday, Friday and Sunday to the Grand Trunk Pacific Steamship Co.'s ships operated by Canadian National Rys., the regular news bulletins that are sent from Toronto and placed on C.N.R. transcontinental trains, being telegraphed to Vancouver and repeated from there by wireless to the ships.

Capt. J. D. Macpherson, with Captains B. Coombe and H. Mowatt as nautical assessors, opened an investigation at Victoria, Oct. 4, into the stranding of Furness-Withy Co.'s s.s. Siberian Prince, which went aground on Bentinck Island, near Race Rocks, B.C., July 27. The investigation was concluded Oct. 6, and judgment was expected to be delivered by Oct. 31. The Siberian Prince, which has been undergoing repairs at Victoria, was expected to sail for Great Britain Nov. 1.

The Canadian National Rys.' s.s. Prince Albert, operated on the Vancouver-Prince Rupert run, is reported to have been sold to the Western Freighters, Ltd. It is also reported that she was laid up, Oct. 8, for overhauling before being put in the Mexican ore trade. She was built for the Grand Trunk Pacific Coast Steamship Co. at Hull, Eng., in 1892, and has the following dimensions: length 232 ft., breadth 30 ft., depth 14.1 ft.; tonnage, gross 1,015, register 587. She is screw driven with engines of 170 n.h.p.

The Union Steamship Co. of British Columbia's new Howe Sound steamship, for which an order has been given to the Coaster Construction Co., Montrose, Scotland, as mentioned in our last issue, will be for day passengers only. She will be 225 ft. long and 37 ft. beam, and will be equipped with propelling machinery for driving twin screws, with Yarrow type boilers, placed amidships, for a speed of 15 knots. She will have a large dining room, capable of being used as a ball room, private rooms, etc., and a space will be set apart forward for the carriage of some cargo. She is expected to be ready by May, 1924.

A Victoria press dispatch says that under an agreement reached between the Dominion Minister of Marine and the British Columbia Government, six harbors: Vancouver, Victoria, New Westminster, Nanaimo, Esquimalt and Alberni, will remain under the Dominion Government's control, and that all remaining harbors in British Columbia will be controlled by the B.C. Government; that while Burrard Inlet, or Vancouver harbor proper, will remain under Dominion Government control, English Bay and False Creek, which goes into the heart of Vancouver's industrial harbor, will be controlled by the B.C. Government.

The automobile traffic between the mainland and Vancouver Island by the Bellingham, Anacortes, Port Angeles and Nanaimo ferries, during this year, totalled 6,847, an increase of 2,416 over 1922.

This increase is due to the development in the service by the C.P.R. and other companies. The C.P.R. operated its new motor car ferry Motor Princess during the season and, in addition, cars were carried on the C.P.R. steamships Charmer and Princess Patricia, the first named running between Bellingham and Sydney, and the other between Vancouver and Nanaimo. The Motor Princess made her last trip for the season Sept. 30, after which she was laid up for the winter in Victoria inner harbor.

The Pacific Salvage Co., Victoria, B.C., is carrying out extensive salvage operations on the wreck of the motorship Kennecott, ashore on Hunter's Point, Graham Island, the most northerly of the Queen Charlotte group, 600 miles from Victoria. The company's tug, Cordova, reached the stranded ship Oct. 10, soon after the casualty, and found the Kennecott to have been holed fore and aft, full of water, and lying broadside to the sea, with the waves breaking completely over her. The crew, who were on the beach, were taken to Seattle, Wash., by the Cordova, the captain and two men remaining by the Kennecott. The salvage tug Algerine left for Hunter's Point Oct. 11, but ran ashore on Oct. 13 on Brodie rock, Principi Channel, between Banks Island and the B.C. mainland north of Swanson Bay. The salvage tug Hercules was sent to her assistance, and she was refloated, apparently undamaged.

Toronto-Montreal-Vancouver Steamship Service.

The experimental service which was arranged under T. Harling & Son's management between Montreal and Vancouver, via the Panama Canal, and given by the s.s. Margaret Coughlan, which has recently completed the first east to west trip, is reported to have been a success. The Margaret Coughlan left Vancouver Oct. 4, for Fraser River points to load lumber, subsequently proceeding to Victoria to complete her cargo, and thence sailed for Montreal, via the Panama Canal, with lumber and canned salmon, after which she will take cargo for a second return trip to the Pacific coast. In the meantime, Robert Reford Co. announce that arrangements have been made with the Donaldson Line to operate a monthly service on the same route. The first ship will be the Argalia, scheduled to sail from Montreal Nov. 1. During the winter the sailings will be from St. John, N.B., and Halifax, N.S.

Since the foregoing was put in type, a Montreal press dispatch has been received stating that the s.s. Argalia will not sail as announced, but that this does not imply the cancellation of the new Montreal-Vancouver regular service, but merely its postponement until next spring.

The Kirkwood Line Ltd., announced recently that its s.s. J. H. Plummer will sail from Toronto, Nov. 20, for Victoria and Vancouver, B.C., via the Panama Canal, without calling at any foreign port. T. M. Kirkwood has been in Hamilton, Ont., in consultation with the harbor commissioners and the chamber of commerce, and it was stated Oct. 16, that an arrangement would probably be made for having the ship start from Hamilton.

H. B. Elworthy, Secretary, Pacific Salvage Co., Victoria, B.C., writes: "We read Canadian Railway and Marine World and enjoy it very much."

Privileges for United States Fishing Ships on Atlantic and Pacific Coasts.

Canadian Railway and Marine World has received an enquiry, as to the regulations under which U.S. fishing ships may enter Canadian Atlantic and Pacific coast ports, for certain purposes. The regulations are contained in two orders in council passed at Ottawa, Jan. 15, as follows:—

No. 73. His Excellency the Governor General, by and with the advice of the King's Privy Council of Canada, is pleased to grant, and doth hereby grant, authority to the Minister of Marine and Fisheries to issue licenses to United States fishing vessels on the Pacific Coast of Canada, which will permit them, during the present calendar year (1923) to enter any port in British Columbia for the following purposes, or any of them: 1, To purchase bait, ice, nets, lines, coal, oil, provisions and all other supplies and outfits; 2, To ship crews; 3, To land their catches without the payment of duty, and, (a) Tranship them in bond to any port in the United States; (b) Sell them in bond to such local dealer or dealers as may be properly authorized therefor by the Minister of Customs and Excise, which dealers shall export the same in compliance with the bonding requirements; (c) Sell them for use in Canada on payment of the duty. The fee on such license shall be at the rate of \$1 per vessel.

No. 74. His Excellency the Governor General, by and with the advice of the King's Privy Council, for and under the provisions of sect. 3 of chap. 47 of the Revised Statutes of Canada, 1906, is pleased to grant, and doth hereby grant, authority to the Minister of Marine and Fisheries to issue licenses to United States fishing vessels applying therefor, which will permit them to enter any port on the Atlantic coast of Canada during the present calendar year (1923) for the purposes of: (a) The purchase of bait, ice, seines, lines, and all other supplies and outfits; and (b) The transshipment of catch, and the shipping of crews. The fee on such license shall be at the rate of \$1 per vessel.

The Canadian Fisheries Association's executive committee adopted the following resolution at a meeting in Montreal recently:—"Whereas the United States Government has rescinded legislation which enabled our Atlantic fishing vessels to make use of their eastern ports, and whereas recent legislation in the U.S. renders it more difficult to place our fish commodities on the U.S. market, therefore be it resolved that the Dominion Government be urged to revoke all special privileges to U.S. fishing ships in our Atlantic ports not specifically provided for in the treaty of 1818, this to include the abolition of the so-called *modus vivendi*, which has been in vogue since the eighties of the last century, thus reducing the privileges of U.S. fishing vessels in our Atlantic ports to the 'humanities' so-called, viz.: wood, shelter, water and repairs; and that the Government be urged to take immediate action; also that a copy of this resolution be forwarded to the Government at Ottawa, and at Halifax, to the Premier, to Hon. Ernest Lapointe, Hon. W. S. Fielding, the press, and boards of trade in the maritime provinces, with a request for endorsement, and to members from fishing constituencies who sit in the House of Commons for the maritime provinces."

U.S. Hydrographic Service on Great Lakes.

The U.S. Navy Department's Hydrographic Office maintains branch hydrographic offices on the Great Lakes at Duluth, Minn.; Chicago, Ill.; Sault Ste. Marie, Mich.; Cleveland, Ohio; and Buffalo, N.Y. The branch hydrographic office maintained at Sault Ste. Marie for a number of years has had insufficient personnel to disseminate hydrographic information properly. In view of the vast amount of tonnage passing through the Sault Ste. Marie Canal, the Hydrographic Office made certain readjustments this year in personnel in order that masters passing through the locks may obtain the latest hydrographic information, and in turn the branch office may receive the latest hydrographic information from masters for dissemination. This office was opened on April 1 by Lt.-Commander B. K. Johnson, U.S.N., who will remain in charge during the navigational season. In addition, a clerk was detailed to the office and the necessary equipment supplied to issue a daily mimeographed memorandum of hydrographic information. These memoranda are made available to all masters passing Sault Ste. Marie. In order that lake mariners may derive the maximum benefits from this service, it is incumbent upon them to furnish the branch offices promptly with changes in aids or menaces to navigation. As many vessels on the Great Lakes are not fitted with radio and are therefore unable to benefit by the broadcasts of hydrographic information by radio, the service at Sault Ste. Marie is of considerable assistance to vessels not carrying radio apparatus.

The Great Lakes Naval Radio Station, call letters NAJ, commencing on the opening of navigation, broadcasted hydrographic bulletins at 10.45 a.m. and 5 p.m. (75th meridian time), on 4,650 meters C. W. This schedule is copied by all radio compass stations in operation on the Great Lakes and rebroadcasted by them on 600 meters, spark, at 11 a.m. and 5.15 p.m. Great Lakes rebroadcasts the same bulletin at 11 a.m. and 5.15 p.m. on 1,988 meters, spark.

The branch hydrographic offices at Duluth, Sault Ste. Marie, and Cleveland transmit messages to be broadcasted to the branch hydrographic office, Chicago. The Chicago office, from the information received prepares the bulletins and telephone them to the Great Lakes Naval Radio Station in time to be broadcasted on schedule.

All branch offices on the Great Lakes are making every possible effort to obtain information of changes in aids or menaces to navigation from the U.S. Army Engineers, Lighthouse Service, U.S. Coast Guard, masters, the Lake Carriers' Association, and ship operators, in order that bulletins may be disseminated promptly. These offices supply the local press and shipping interests with daily memoranda containing the latest hydrographic information.

Clothes that Passed in the Night.

Passenger (after the first night on board ship)—I say, where have my clothes gone?

Steward—Where did you put them?

Passenger—In that little cupboard there, with the glass door to it.

Steward—Bless me, sir, that ain't no cupboard. That's a porthole.—Reynold's Newspaper.

Protection of Aids to Navigation.

Owing to the destruction of a number of aids to navigation, and others having been tampered with recently, the Marine Department has issued a warning as follows:—

"The attention of mariners is specially drawn to the following regulations for the protection of lightships, buoys, beacons and floating lights, adopted by order in council May 20, 1907, under the provisions of Secs. 839 and 840 of the Canada Shipping Act, chapter 113, R.S.C. 1906, and now having the force of law:—"1. Any person who wilfully or negligently injures any lightship, buoy, beacon or floating light, or who removes, alters, or destroys the same, or who causes, or permits any vessel or tow under his control to ride by, make fast to or run foul of any such aforesaid aids to navigation shall be liable to a fine not exceeding \$200 for each offence. 2. Any person who, through unavoidable accident, or otherwise, has run down, dragged from its position or in any way injured any lightship, buoy, beacon or floating light, shall, as soon as practicable give notice of the accident to the customs officer at the nearest port. Failure to give such notice, shall be punishable with a fine not exceeding \$50 for each offence."

Bounty for Fishing Ships, Etc.

In answer to an enquiry it may be stated that the following was approved by the Governor-General on Jan. 26, and passed as order in council 155:—"The Committee of the Privy Council, on the recommendation of the Minister of Marine and Fisheries, advise that \$160,000, payable under the provisions of the Revised Statutes, 1906, chap. 46: 'An Act to encourage the development of the sea fisheries and the building of fishing vessels,' be distributed for the year 1922-23 upon the following basis:—

"Vessels.—The owners of the vessels entitled to receive bounty, shall be paid \$1 per registered ton, provided, however, that the payment shall not exceed \$80, and all vessel fishermen entitled to receive bounty, shall be paid \$6.95 each.

"Boats.—Fishermen engaged in fishing in boats, who shall also have complied with the regulations entitling them to receive bounty, shall be paid \$5.35 each, and the owners of fishing boats shall be paid \$1 per boat."

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

Hamilton Electric Co., Ltd., Hamilton, Ont.—Charles E. Dickson, who entered the John Bertram & Sons Co.'s service at Dundas in 1900, as clerk in the Superintendent's office, under Alexander, now Sir Alexander, Bertram, and who in 1908 was appointed Cashier, which position he held continuously until his recent resignation, has bought an interest in

the Toronto & Hamilton Electric Co., of which he has been appointed Manager. It is an old established company, which was started by Mr. Dickson's uncle, Robert Lynch, and the late Hubert Job, B.Sc.

Guy Tombs Ltd., 285 Beaver Hall Hill, Montreal, has added a steamship ticket department to its general transportation business, as a result of Mr. Tombs' recent visit to Europe.

Transportation Associations, Clubs, Etc.

The names of persons given below are those of the secretaries, unless otherwise stated:—

American Association of Port Authorities—T. S. McChesney, New Orleans Port Commission, New Orleans, La.

Bureau of Explosives—A. H. McMullen, Inspector, lines east of Port Arthur, 354 New Union Station, Toronto.—D. W. McNabb, Inspector, lines west of Port Arthur, C.P.R. station, Winnipeg.

Canadian Car Demurrages Bureau, Eastern Lines—W. J. Collins, Manager, 401 St. Nicholas Building, Montreal.—Western Lines—F. W. Thompson, Chairman, 805 Boyd Bldg., Winnipeg.

Canadian Electric Railway Association—Eustace Smith, Jr., 35 Yonge Street, Toronto.

Canadian Freight Association—Eastern Lines, G. C. Ransom, Chairman, 909 Shaughnessy Building, Montreal.—Western Lines, F. W. Thompson, Chairman, 805 Boyd Bldg., Winnipeg.

Canadian Industrial Traffic League—H. W. Blahout, 950 Woodbine Ave., Toronto.

Canadian Passenger Association—Eastern Lines, G. H. Webster, 54 Beaver Hall Hill, Montreal.—Western Lines, E. J. Stone, 306 Union Station, Winnipeg.

GRAIN ELEVATOR AND CONVEYOR GALLERIES AT HALIFAX, N.S.

Notice to Contractors

SEALED TENDERS, addressed to the undersigned and marked "Tender for Grain Elevator and Conveyor Galleries", will be received at the office of the undersigned until 12 o'clock noon on

WEDNESDAY, NOVEMBER 7th, 1923.

Plans, specifications and form of contract to be entered into can be seen on and after this date at the office of the Deputy Minister of the Department of Trade and Commerce, Ottawa.

Copies of plans and specifications may be obtained on the payment of the sum of \$100.00. To bona fide tenderers this amount will be refunded upon the return of the above in good condition.

An accepted bank cheque on a chartered bank of Canada for a sum of \$50,000, and made payable to the order of the Minister of the Department of Trade and Commerce, must accompany each tender. A like amount of Dominion Bonds, properly assigned to the Minister will be accepted. This sum will be forfeited if the party tendering declines entering into contract for the work at the rates stated in the offer submitted.

The cheque or bonds thus sent in will be returned to the respective contractors whose tenders are not accepted.

The cheque or bonds of the successful tenderer will be held as security or part security for the due fulfilment of the contract to be entered into.

The lowest or any tender not necessarily accepted.

By order,
F. C. T. O'HARA,
Deputy Minister.

The Model 2A Dwarf Signal

The advantage of having all signal mechanisms the same type at an electric interlocking plant is important from the standpoint of maintenance. Further, the dwarf signal should be equally as dependable as the high signal.

Except for mounting and counterweighting, the mechanism of the Model 2A Dwarf Signal is the same as the mechanism of the Model 2A

Top-of-mast Signal. The control operation and indication of the two signals are the same.

The Model 2A Dwarf Signal occupies little space, and is well adapted for use at yards and terminals where track centers are close. It is equal in dependability to the Model 2A Top-of-mast Signal, which is well known for its remarkable performance record.

Feed Water Heaters ON Transfer Locomotives

The feasibility of equipping transfer locomotives with Elesco Feed Water Heaters has been ably demonstrated on a prominent Belt Line where savings averaging 15 to 20% in fuel and water were obtained.

Locomotives of similar types, not equipped to utilize waste heat in a portion of the exhaust steam to preheat the boiler feed water, are worked 16 to 19 hours on a tank of fuel, whereas those equipped with Elesco Feed Water Heaters can be worked 25 to 28 hours.

YOU can effect a **SAVING** in Lubrication costs
by using **TULC** for it will give results not to
be obtained by the use of any other Lubricant.

**T
U
L
C**

Will not splash over commutators.
Will not cause short circuit or burnt armatures.
Will not leak or rot fields.
Will so save in brass and babbitt to pay for itself.
Will only feed sufficient to lubricate properly.
Will save dripping losses.
Will make axles and journals last longer.
Will cut down a lot of pull-ins.
Will eliminate hot boxes and cut axles.
Will be sent for trial on request.

Come to the Big Game Country Canada

The Big Game Hunter's Paradise

PACK up your rifle and kit and come to the place where real sportsmen test their skill. Here there's game fit for the steel of men who feel the "kick" of hunting the Grizzly, outwitting the crafty Mountain Sheep and Goat and bringing in the prize Moose or Deer. Nova Scotia, New Brunswick, Quebec, Ontario, Manitoba, Alberta, British Columbia are each the haunt of big game, easily reached by Canadian National Railways.

"Where to Hunt, Fish and Paddle in the New North" will give you helpful details in planning your trip this year. For this and information as to fares, open seasons, etc., enquire of nearest Agent, or write C. K. Howard, General Tourist Agent, Montreal, P.Q.

**Subtract—
0.20% to 0.35% from the gradient**

That's what the use of Stafford Roller Bearings means in train operation. It is easy to visualize what this means in train operation and fuel consumption.

In addition, the saving in journal friction means reducing the cost of lubricating car journals to the vanishing point.

Service shows the most successful car roof to be the

All Steel Dry Lading Roof

which made possible the following specifications:

No. 1. That should be weather-proof under all conditions, also rust-proof, fire-proof and burglar-proof.

No. 2. That should not require maintenance for at least ten years.

No. 3. That should be of low deadweight and give the car a low center of gravity.

No. 4. That should lessen strain on the superstructure of the car when the car is in motion.

No. 5. That should strengthen, rather than detract, from the strength of the car frame.

No. 6. That should give the greatest interior capacity and the lowest clearance limits.

No. 7. That should be flexible enough to conform to every service condition of the car.

No. 8. That should be possible to use again on the same or another car, even in case of partial or total destruction of the rest of the car by fire or wreck.

No. 9. That should not require roofing boards.

No. 10. That should be of low first cost.

No. 11. That should permit of inspection on the part of any shipper by merely closing the doors of the car and if no rays of light are seen through the roof, the shipper to consider it a weather-tight roof.

No. 12. That should be so constructed that the carlines, purlines and ridge, tie the sides and ends of the car together firmly, so that the weather-proof roof has only the one duty of protecting the contents of the car from the elements.

Railroad Lubrication

Worth Saving

The expensive equipment represented by the cylinders, pistons, bearing and motion parts of the locomotive; the journals and brasses of cars and coaches; the gears and pinions of electric motors cars; the machinery of the shop or power house — all parts of the largest investment of steam and electric railways—is certainly entitled to careful consideration as to the protection and maintenance that will insure its full service life.

Galena lubricants were developed and perfected for exactly this purpose. Their superior quality is maintained for the sole reason of furnishing adequate protection to this class of equipment. Good quality is as essential to the lubricant, as to the lubricated part itself, if economy and efficient operation is to be secured. None but the best of oils are capable of withstanding the stress of railway service without breaking down.

It has been demonstrated to the satisfaction of many railroads—steam and electric—that Galena lubricants are capable of literally saving an amount equal to their cost through the extra service attained and the lessened depreciation in equipment—when compared with the performance of the ordinary refinery products marketed for this use. The matchless service records established by Galena Oils are convincing evidence of their superiority.

*"More miles to the pint;
Better service to the mile."*

26" x 30" Back Geared Crank Shaper

Our exclusive design of feed change on this shaper is an outstanding feature of first importance.

The feed can quickly and easily be changed while the machine is in operation without the slightest danger of accident to the operator; not so on other makes.

Other equally desirable features are found in this shaper.

Our bulletins describing these details is yours for the asking.

"Brownhoist Cranes are Unsurpassed"

Brownhoist builds cranes, buckets, chain and belt conveyors, bins and other handling equipment. The cranes are mounted on creepers or 8 or 4 wheel railroad trucks and are powered by gas engine, steam or electricity.

"Our company has used several makes of locomotive cranes and we know by comparison that the Brownhoist is not surpassed by any other," says the Franc Slag Company. This company operates many slag and stone crushing plants in Ohio and Michigan and have used Brownhoist cranes for years.

The Brownhoist at their Toledo plant handles an average of 500 tons of slag a day at a cost of 4 cents per ton. Besides its regular work of handling crushed slag this Brownhoist does all kinds of odd jobs around the plant.

With the increasing cost and difficulty in getting labor the money-saving possibilities of a Brownhoist are worthy of your careful study. Write for a copy of catalog K and let us go into your problem with you.

The Brown Hoisting Machinery Co., Cleveland, Ohio

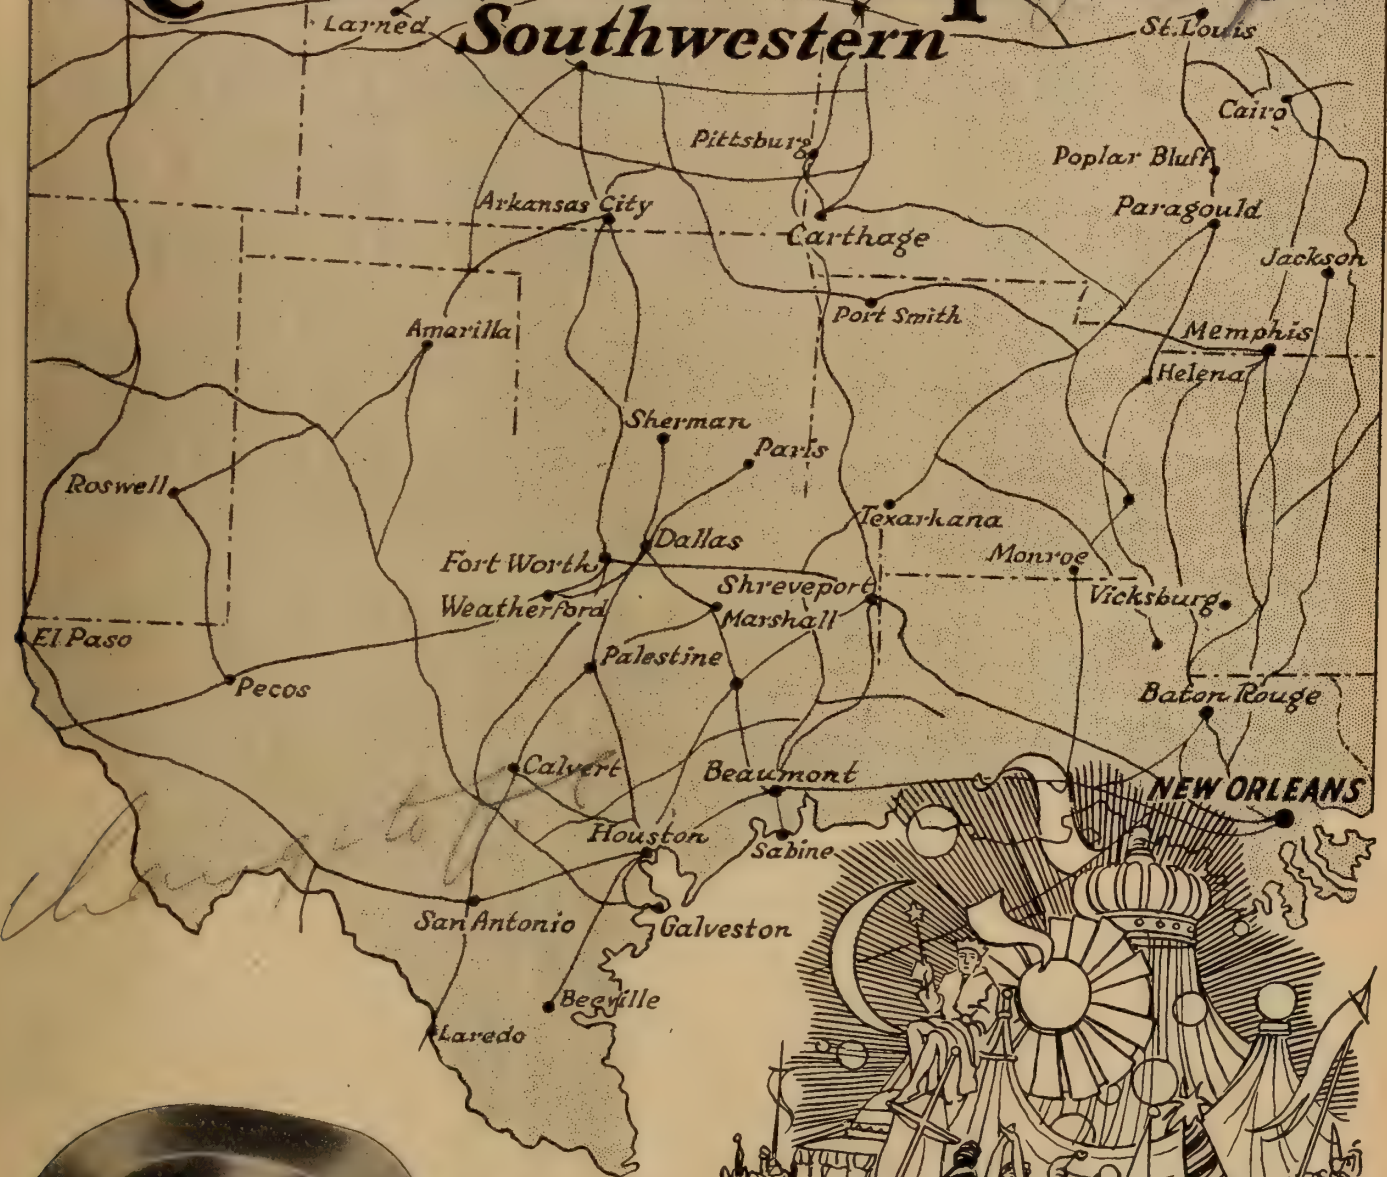

Branch Offices: New York, Chicago, Pittsburgh, San Francisco, New Orleans

FESTIVE time in old New Orleans—whirling carriages and dancing throngs—all under the mystic glow of swaying lanterns and a southern moon—how enticing to the pleasure lover who journeys thence over routes secured by **HIPOWER**

HIPOWER adequately, economically and permanently maintain the bolted security of track joints.

That's why they are universally used.

THE NATIONAL LOCK WASHER CO.
Newark, N.J., U.S.A.

What C-G-E Arc Suppressor Plates Do

C-G-E Arc Suppressor Plates are installed opposite the fingers where there is the most arcing. They narrow the arc passages, which increase the resistance of the arc and the cooling effect of the plates.

NOTE the difference in time required to disrupt the arc in a K-35 controller as shown by actual test. This difference means there's considerably less burning of controller fingers, segments, and arcing plates when the equipment is protected with C-G-E Arc Suppressors.

Consider the value of these auxiliary plates in reducing maintenance costs. They reduce carbonization and eliminate much of the trouble from pitting of contacts. Modern controllers are equipped with them to give better, longer service.

Arc Suppressor Plates can be used to advantage in any C-G-E controller having individual finger blow-outs. Installation requires only a few minutes. They are inexpensive. Try them.

TO APPLY STOKER SIMPLY BOLT IT IN PLACE

THE DUPONT SIMPLEX STOKER is designed to fit the engine.

It's not a big job to apply a DUPONT SIMPLEX STOKER.

There are no changes to be made in the boiler back head.

Adjustments for stoker weight, such as increased bearing areas or heavier springs, are not required.

The DUPONT SIMPLEX STOKER comes to your shop in three simple units designed to fit the locomotive. Application is largely a matter of bolting these units in place.

DUPONT-SIMPLEX STOKER

Scientific Treatment of Boiler Feed Water

Dearborn

Leading the Way For 36 Years

For 36 years Dearborn has maintained that accurate analysis of the boiler feed water, proper reagents compounded for the injurious salts found and laboratory control of changing conditions, constitute the only effective method of water treatment.

While other propositions have been tried out from time to time through the years, none have withstood the test of actual service. The injurious salts in the water must be changed, and made harmless—so-called “metal” or “protective” coatings, etc., are useless, otherwise, and “one formula compounds” cannot meet the problems presented by different supplies of varying character.

We keep constantly ahead of our subject—and give individual attention in our laboratory, engineering and manufacturing departments to each customer's need.

—With this result:

For 36 years we have gained and held an average of more than three new accounts daily.

Have you tried Dearborn Service? If not, will you talk over your feed water problems with the Dearborn Salesman next times he calls?

Advertising Made to Serve You

Merchandise lives or dies as it does or does not meet a human need. Advertising is subject to the same law of service. The real measure of its value is what it *gives*, not what it gets.

But you are not interested in *all* advertising any more than you are in all merchandise. That is one big reason why you have a highly specialized Business Paper in your field such as the one carrying this advertisement.

LIST OF MEMBERS

Each has subscribed to and is maintaining the highest standards of practice in its editorial and advertising service.

How It Works for You

What it does for you and your field editorially is self evident, but its *aditorial* service is just as vital. Instead of a buyer having to depend upon gossip, hearsay and dribbles of information from this or that source, he gets it all between two covers.

Yet advertising is NOT an added expense, but an improved distributive process, which takes the place of slower, more costly and less efficient methods.

That is why it pays to read advertising even more than it pays to advertise. Especially if you read it in papers which have met the exacting requirements of membership in The Associated Business Papers, Inc., for one of its standards of practice requires that a paper must decline any advertisement which has a tendency to mislead or which does not conform to business integrity.

You are invited to consult us freely about Business Papers or Business Paper Advertising

CONTINUOUS SERVICE

WHILE you sleep, while you work and while you play your watch is ticking busily—ready to tell you the time whenever you call on it.

And for every tick of the watch there is stress and strain on the insulators that carry your transmission lines. Yet the line must be reliable so, when a customer pushes the button that lights his lamp or throws the switch that starts a factory, he will be served.

O-B Insulators are helping maintain continuous service on transmission lines all over the world.

CANADA CEMENT BUILDING

MONTREAL, CANADA

Track supports for the new Union Station in Chicago are of concrete. This picture shows one of the tracks laid on short concrete cross ties mounted on a ten-foot wide concrete base.

25 Acres of Concrete in Chicago Union Station

Practically all tracks in the new Union Station in Chicago, for the joint use of four large railroads will be placed on concrete slabs.

In the train shed proper the rails will rest on short ties embedded in concrete roadbed, that in turn rests on a concrete slab 10 inches thick and 14 feet wide. All approach tracks, with the exception of one section 800 feet long, laid three years ago, will be laid in ballast on top of a 10-inch concrete slab. The total area of concrete slab track support will be slightly over 25 acres.

On many of the Chicago Union Station tracks, a concrete base is used and the track laid and ballasted on it in the usual manner.

Four Chicago Railways Invest In Permanence And Safety

PROBABLY no other railway tracks in the world will be subject to more severe wear than those now being completed at the new Union Station at Chicago. For that reason practically all tracks will be laid on concrete slabs.

The officials of these railways found such a striking reduction in maintenance costs effected by a section of concrete track support laid in 1920, they did not hesitate to adopt concrete construction for this subsequent work.

The use of concrete for railroad construction has long since passed the experimental stage. Each year sees a decided increase in its use for this type of construction where permanence and lower maintenance cost is the paramount consideration.

Railroad officials have come to realize that the same qualities that have won for concrete nation-wide recognition as the ideal paving material to insure Highways of Permanence are the qualities necessary to insure for railroad construction low maintenance cost, permanence and safety.

What is Rivalac?

It is a protective paint for iron and steel that will positively protect against rust.*

Rivalac is far superior to the ordinary coal tar and asphalt paints because of the way it is made. Ordinary coal tar and asphalt paints are made by taking a brittle or semi-brittle base and dissolving them either in oil or tar or gasoline, which, after the solvent has evaporated away, leaves the same brittle substance as was present at the start. Rivalac, on the other hand, is a refined material containing the essential oils in combination and the time of complete evaporation is thereby greatly lengthened.

Rivalac is used by leading manufacturers for stacks, boiler fronts, stills and drums—Dip for pipe, structural steel and metal lath—Concrete waterproofing — Protection against acid fumes.

Locomotive Freight Tonnage Ratings

By W. U. Appleton, General Superintendent, Atlantic Region, Canadian National Railways.

The importance of establishing correct tonnage ratings on every subdivision of a railway cannot be over estimated. It is plainly apparent to everyone that it is uneconomical to set a tonnage rating too low, but it may not have occurred to some that two or three cars over the correct rating for a subdivision may prove almost as expensive to haul as another train. For example, an overloaded locomotive may stall and be compelled to double over a couple of grades and eventually cut and run for coal before its train can be brought into the terminal. The cost of running this train will be much higher and out of all proportion to the extra load hauled, and if

tonnage, is incorrect on some of the districts. This is more or less of a side issue and it is mentioned here chiefly to show how far-reaching may be the effect of a faulty tonnage rating.

Contrary to popular opinion, the establishment of locomotive tonnage ratings is far from being an exact mathematical science, but neither is it one of those jobs where we figure a little and then guess a whole lot. There are so many extraneous factors which exert a certain amount of influence on the correct potential or possible tonnage, such as length of subdivision, speed at which trains must be operated, density of traffic, location of passing tracks, water tanks, coal-

can be sustained over the ruling grades at the speed which is called for by operating conditions. On a subdivision with short, steep grades, where a considerable part of the grade can be covered on momentum, it is good practice in most cases to figure on topping the grade at a moderate speed, with the locomotive developing its full tractive effort, but on a subdivision with constant grades many miles long, such as are encountered on the former National Transcontinental Ry., it is necessary to figure on the tractive effort which can be sustained indefinitely at whatever speed is required by the operating conditions of that particular subdivision.

Fig. 1. Curves of Tractive Efforts of Locomotives at Different Speeds.

the extra expense due to delaying other trains which may be running on the same division is considered, it is hard to tell where the expense due to delay and disorganization of traffic will cease. There is just one correct tonnage rating for each section of the road; if the rating is set either above or below the correct figure, the result is a loss of efficiency, and it is therefore the aim of railway officials to establish ratings which are correct.

The organization of some of the larger railway systems includes a bureau of statistics, from which certain information is issued periodically concerning all the different districts on the system. One of the chief objects of issuing these statements is to stimulate competition between districts, get every man on his toes and thus improve the efficiency of the system as a whole. One of the factors of which the statistician has to keep close record is the ratio of the actual tonnage hauled to the potential tonnage, and it will readily be realized that the value of this ratio will be entirely lost if the tonnage rating, i.e., the potential

ing plants, etc., that the purely mathematical end of the work must be discounted to a certain extent. Some of these conditions may also vary from time to time and permit a variation in the tonnage rating, but notwithstanding all this, particular stress should be laid on the fact that with any particular set of conditions there is just one correct tonnage rating for a specified class of locomotive over a specified subdivision, and further, it is possible to determine accurately the correct rating. Primarily there are just two main factors which govern the correct tonnage rating for any subdivision. First, the drawbar pull exerted by the locomotive, and second, the resistance of the train, two equal and opposite forces acting upon the locomotive drawbar. Each of these main factors may be influenced by a host of minor factors and a careful analysis of all conditions is necessary before a tonnage rating is definitely established.

The tractive effort used in computing a tonnage rating is not necessarily the maximum starting tractive effort of the locomotive, but the tractive effort which

This sustained tractive effort is naturally lower the higher the speed required, and it may be even further limited, on grades which are 20 or 30 miles long, by the steaming capacity of the boiler or by the coal shovelling capacity of a fireman. There is a limit to human endurance and it is quite necessary to take cognizance of this, although the human endurance factor is being eliminated as rapidly as possible, by the application of mechanical stokers to our heaviest classes of power. Poor location of coaling stations and water tanks may also in some few instances lower the tractive effort which can be obtained from the locomotive, for it is futile to draw so heavily on the power plant that the coal or water supply is exhausted before there is an opportunity of replenishing it.

The accompanying chart, fig. 1, shows the highest tractive effort which can be obtained from various classes of Canadian National locomotives at different speeds. The locomotives mentioned are designated by type, diameter of cylinder, stroke of piston, diameter of driving wheel and boiler pressure; thus, the top

curve is for a Santa Fe type, with a 26 in. diameter cylinder, 32 in. piston stroke, 57 in. diameter driving wheel and 200 lb. per sq. in. boiler pressure. The tractive effort indicated by these curves is theoretical, and can only be approximated at the higher speeds under the very best of conditions. The starting tractive effort can always be relied on, provided the locomotive is in good shape, but in order to meet the average conditions encountered on the Atlantic Region it is necessary to figure on developing only about 85% of the theoretical tractive effort at the higher speeds.

Tractive Effort and Drawbar Pull.—It will be well to distinguish clearly between the terms "tractive effort" and "drawbar pull." Tractive effort is the horizontal force exerted on the rails by the driving wheels' tires, whereas the drawbar pull is the force exerted at the drawbar at the rear of the tender. As it must take a certain amount of effort to move the locomotive and tender, it is quite clear that the drawbar pull can never equal the tractive effort, unless the locomotive is running down grade. An increase in drawbar pull is particularly noticeable sometimes when a locomotive has just passed the crown of a heavy grade, and is travelling down hill with the greater part of the train still coming up the grade. Under such circumstances it is possible for the drawbar pull to equal or even exceed the tractive effort exerted by the locomotive. This point has, however, only been mentioned as a matter of interest and has no particular importance. Fig. 2 shows the approximate resistance of the locomotive and tender on different grades, for the same classes of locomotives as are shown in fig. 1.

Computation of Drawbar Pull.—Supposing, by way of example, we wish to locomotive naturally has to be draughted

Fig. 2. Approximate Resistance of Locomotive and Tender for Different Grades.

ascertain the drawbar pull which can be sustained at a speed of 15 miles an hour by the consolidation $24 \times 32 \times 63$ in. \times 200 lb. on a 0.6% compensated grade: Referring first to fig. 1, the tractive effort for this particular locomotive, at 15 m.p.h., is shown as 42,000 lb. This can only be obtained, however, under ideal conditions, and it is necessary to make the proper reduction to suit all the conditions encountered on the district concerned. It was mentioned above that on the Atlantic Region only 85% of the theoretical tractive effort can be relied on at the higher speeds, and this will reduce the tractive effort in this particular instance to 35,700 lb. By referring to fig. 2, it will be seen that the approximate resistance of the same locomotive and tender on a 0.6% grade will

be 4,700 lb., and this leaves a drawbar pull of 31,000 lb. available for hauling tonnage. This has been proved by repeated tests to be the maximum drawbar pull which can be sustained indefinitely by this class of locomotive on this grade, under the conditions which exist in this particular locality.

If this class of locomotive was being rated for a subdivision with short, heavy grades, such as are found at many points along the former Intercolonial Ry., it would be possible to figure on the maximum tractive effort, which can be developed up to a speed of over 8 miles an hour (see fig. 1). Supposing the grade was 1.3%, the tractive effort available at low speed is 49,700 lb., the approximate resistance of the locomotive and tender on this grade is 7,000 lb. (see fig. 2), and this will leave a drawbar pull of 42,700 lb. for hauling tonnage.

Influence of Quality of Fuel on Tractive Effort.—The reasons for the greater drop in tractive effort with increased speed than that indicated by the curves shown in fig. 1, are various, but the most important reason is directly traceable to the grade of fuel which is used in the maritime provinces. To thoroughly analyze this point would take considerable time and the following short explanation will have to suffice. The fuel in a locomotive firebox is burned by means of an induced draught, which is created by a jet of exhaust steam from the cylinders impinging upon the sides of the smokestack. Some grades of fuel require a fiercer draught than others. A low grade of fuel, which tends to clinker badly, needs a very heavy draught to assist combustion and bring out its best steaming qualities. Some of the coal used on the Atlantic Region is fairly good and some is anything but the best, and a

very low speeds.

The Resistance of a Train is due to grade, curvature, and friction. The resistance due to curvature is, of course, a frictional resistance, but as it is due to a track condition, it is computed with the grade, and not confused with the frictional resistance of the moving parts of the train. The resistance due to grade is the only mathematically accurate factor which is used in tonnage computations. It amounts to 20 lb. per ton (2,000 lb.) hauled per 1% grade and cannot be more or less. The resistance due to curvature is generally added to the grade resistance in cases where the grades are not compensated for curvature, and the usual practice is to add 0.04% to the grade percentage for each degree of curvature and figure on the equivalent

Fig. 3. Resistance of Freight Cars on Level Track at Moderate Speed.

grade. For example, the resistance due to grade and curvature per ton hauled on a 1% grade, with a $2^\circ 30'$ curve would be taken as $20 \times 1.1 = 22$ lb. On some sections of our road the ruling grades are all compensated for curvature, that is to say, the gradient is sufficiently reduced wherever curves are encountered, to make the combined resistance for grade and curve equivalent to the ruling grade resistance on straight track. In cases of this kind it is not necessary to consider track curvature when computing tonnage.

The frictional resistance of a train is produced by a variety of conditions which may be briefly summed up as follows:— 1. Journal friction. 2. Rolling friction of the wheels on the rail. This includes concussion on rail joints, flange friction, etc. 3. Atmospheric resistance. It is practically impossible to determine just what resistance originates from either of these sources, and no useful purpose could be served by analyzing the subject to that extent, but, by years of careful test and experiment, the total frictional resistance for various weights of cars under favorable conditions has been determined.

Fig. 3 shows the frictional resistance per ton of various weights of cars, and fig. 4 shows the combined grade and frictional resistance per ton for various weights of car on different grades. These charts are plotted for freight cars at moderate speeds, i.e., 20 miles an hour or less. The frictional resistance of the locomotive per ton is considerably higher than that of the cars, as machinery friction runs rather high, especially on a locomotive with 4 or 5 pairs of driving wheels, but this has all been taken care of in the chart, fig. 2.

Computation of Tonnage Ratings.—If the characteristics of the road and the operating conditions are known for any subdivision, it is a simple matter to determine the tonnage which should be hauled by means of the charts figs. 1, 2 and 4. Suppose that we wish to set a tonnage rating for the $24 \times 32 \times 63 \times 200$ lb. consolidation locomotive on a sub-

division with a 0.6% compensated ruling grade 20 miles long, and that the operating conditions necessitate a speed of 15 miles an hour being maintained over this grade:—Referring first to fig. 1, the tractive effort at this speed is found to be 42,000 lb., taking 85% of this, 35,700 lb., as the maximum tractive effort which can be relied on at this speed under local conditions and then subtracting 4,700 lb. for the resistance of the locomotive and tender (see fig. 2), the available drawbar pull for hauling tonnage will be 31,000 lb. Now referring to fig. 4, the resistance per gross ton for 50-ton cars on a 0.6% grade is 15.64 lb.; therefore the tonnage rating for cars with an average weight of 50 tons should be $31,000 \div 15.64 = 1,980$ tons.

In the case of a subdivision on which the tonnage is limited by a comparatively short heavy ruling grade, and the operating conditions permit the crown of the grade to be covered at low speed, the computation of tonnage is even simpler. Supposing that the grade is 1.2% with a curve of $2^\circ 30'$ uncompensated, the equivalent grade will then be 1.3%. From the chart, fig. 1, the tractive effort available with the same class of locomotive at low speed is 49,700 lb., the resistance of the locomotive and tender on a 1.3% grade is 7,000 lb. (see fig. 2), which leaves a drawbar pull of 42,700 lb. available for hauling tonnage. From fig. 4 the resistance per gross ton for 50-ton cars is 29.64 lb., therefore the tonnage rating for cars with an average weight of 50 tons should be $42,700 \div 29.64 = 1,440$ tons.

Equivalent Tonnage.—It will be perfectly clear even to the most inexperienced that a train consisting of 50 cars, averaging 20 tons gross, will require considerably more power to haul it than a train of 20 cars averaging 50 tons gross, owing to the greater frictional resistance of the longer train, so it is quite evident that it would be useless to set tonnage ratings in gross tons without taking into consideration the length of the train. In former years this was taken care of on the Government Rys. by setting all tonnage ratings in equivalent tons, and, in figuring the equivalent tonnage of a train, a string of cars of light average weight would get the benefit of an allowance which compensated for the increased wheelage and higher frictional resistance per gross ton. The method which was followed was to sub-

tract one-half the total contents of the train from the total tare and to add 10%, 20%, or 30% of the remainder, according to the nature of the subdivision, to the gross tonnage of the train. The gross tonnage, plus this amount added for train resistance, was known as the equivalent tonnage of the train.

On subdivisions with very easy grades the trains are naturally much longer than on those with heavy grades, and a greater allowance is necessary for train resistance. For this reason 30% of the difference between half the contents and the tare was added to the gross tonnage for ruling grades up to 0.4%, 20% for grades over 0.4% and up to 1%, and 10% for grades over 1%. With the average fully loaded freight car the contents will be about double the tare weight, and in the case of train consisting of cars all loaded to capacity, it is plainly apparent that there will be no allowance for train resistance, as half the total contents will be equal to, or perhaps greater than, the total tare. Equivalent tonnage was therefore a haulage equivalent based on a train of fully loaded cars.

This method of figuring tonnage involved considerable work when making up trains, and, what is worse, there were great opportunities for error, and for the last few years the Canadian National Rys. have published their tonnage tables in such a way as to entirely eliminate the necessity of considering equivalent tonnage.

The tonnage rating for the Springhill Subdivision, which is given herewith, is typical of the tonnage tables which are included in every issue of Canadian National timetables. It will be noticed that full tonnage is hauled only when the average weight of cars is 50 tons or over, and that reductions are shown for lighter average weights. The grades are heavy on this subdivision and the ratings for 40, 30 and 20-ton cars are therefore 97½%, 95% and 90%, respectively, of the full rating. If the ruling grades were 0.4% or under, much heavier tonnage would be hauled, and the reductions for the lighter average cars would be 92½%, 85% and 70% of the full rating, and for grades over 0.4% up to 1%, 95%, 90% and 80% for the 40, 30 and 20-ton car average respectively. With this style of table the gross tonnage of the train which should be hauled by any locomotive can be picked out at a glance

when the average weight of the cars is known. The locomotives shown—in this particular case 65%, 53%, 50% and 30%—include all the classes in regular freight service on the subdivision, there is no 100% locomotive on the system, and this line is only included to facilitate calculating the tonnage for a locomotive which does not happen to be shown in the table. For example, if a 41% locomotive was working on the Springhill Subdivision, its tonnage rating would be taken at 41/100 of the tonnage shown for the 100% locomotive. The locomotive percentages are based on their maximum tractive effort, 1% being equivalent to 1,000 lb. tractive effort, thus the 65% locomotive will be our Santa Fe with a maximum tractive effort of 65,000 lb.

The practice of including tonnage ratings in the timetables, instead of publishing them in book form, has a great deal to recommend it, and one of the chief advantages is that timetables are constantly being reissued, and any changes necessary in tonnage ratings due to changing conditions, transferring of power, etc., can be kept up to date, without the necessity of putting out new books or issuing supplementary bulletins.

Tonnage Tests.—From the foregoing it should be clear that, provided all the conditions are known, it is possible to set a tonnage rating for any subdivision which will come within very close limits of the correct loading for the locomotives operating on it. This being the case, the inference may be drawn that conducting tonnage tests is neither necessary or desirable. This impression is erroneous, however, and there are many reasons why it is important to test tonnage ratings on all main lines, and also on any branch lines where full tonnage is hauled. To begin with, conditions are not always exactly as they are represented; the grades and curves may not be exactly as shown on the track profile; we know that long dumps will sag and that the track will get slightly out of alignment at curves, especially on a single track road where comparatively fast running is tolerated in the opposite direction down the ruling grades. It may be found on testing a short, heavy grade that momentum may be utilized to a greater or lesser extent than that calculated.

Conceding then the advisability of making tonnage tests, why is a dynamometer necessary? In the first place, it is essential to be sure that the loco-

Locomotive Tonnage Ratings, Canadian National Railways, Maritime District.

To arrive at the proper load for a locomotive, tonnage ratings must be modified by the authorized allowance for car resistance, weather conditions, and air pump and train line capacity. The tonnage ratings in the tables below make due allowance for car resistance.

When the average weight of all loads and empties in the train is 20 tons use 90% rating	When the average weight of all loads and empties in the train is 30 tons use 95% rating	When the average weight of all loads and empties in the train is 40 tons use 97½% rating	For a train consisting of cars having an average weight of 50 tons or over 100% rating			For a train consisting of cars having an average weight of 50 tons or over 50 tons use 100% rating	When the average weight of all loads and empties in the train is 40 tons use 97½% rating	When the average weight of all loads and empties in the train is 30 tons use 95% rating	When the average weight of all loads and empties in the train is 20 tons use 90% rating

tive used on the test train is in a condition to develop the tractive effort for which it is rated under the test conditions and that the locomotive crew are operating the locomotive to best advantage. The value of tonnage tests as a means of educating locomotive drivers and firemen should never be disregarded, as such tests provide an excellent opportunity to demonstrate on the spot the superior results to be obtained by correct operation of the locomotives. The dynamometer which is used on locomotive

viduals making the test, and has also the disadvantage that a really complete impression of the efficiency of operation cannot be formed at any particular instant during the test. There are advantages, however, which far outweigh these disadvantages: first, the initial cost of the equipment; the cost of the apparatus on car 84, the Atlantic Region dynamometer, was a very small fraction of that of the equipment of the Westinghouse car. Then take into consideration the fact that car 84 is used as an ordinary

of there being any doubt as to the accuracy of the gauge showing the drawbar pull, as the buff gauge may be cut in without any trouble and the readings of the two gauges checked one against the other.

When making a tonnage test with this car the observer keeps a record of the drawbar pull, speed, mileposts, time, etc., and the master mechanic, or some other competent person, rides in the locomotive cab and makes notes of all changes in steam pressure, reverse lever position, throttle opening, etc., so that at the end of the run all essential information is available, and it is only necessary to plot a chart from which the railway officials concerned may get a complete impression of the performance. When a tonnage test is to be made, the profile of the subdivision should first be examined, and the ruling grades picked out, then the operating conditions should be studied, and questions such as the speed required over the grades, whether the trains may have to stop near the foot of a grade, or whether a run for the grade may be depended on, should be settled. The theoretical tonnage should then be set to suit these conditions, and the test train made up, every car being weighed at the terminal from which the test run is being made. The result of the test may show the tonnage correct, or that a slight adjustment is desirable, and in either case the official tonnage table may be made up and issued to the operating department.

The chart, fig. 5, illustrates a test of a Santa Fe locomotive on the ruling grade, eastbound, between Moncton and Springhill Jet. The train consisted of 53 cars, with a gross tonnage of 1,802, or an average weight per car of 34 tons. The locomotive struck the foot of the

Fig. 4. Total Resistance of Freight Cars on Different Grades at Moderate Speeds.

tests is very simple in principle. It consists of a cylinder rigidly bolted to the underframes of a car, the cylinder is completely filled with oil and the piston rod connected in tandem with the drawgear of the car. When a pull is exerted on the coupler, this pull is transmitted by the drawgear to the piston of the dynamometer and sets up a pressure in the oil at one end of the cylinder. This pressure has a definite relation to the pull exerted, according to the effective area of the piston, and if the oil is piped from the end of the cylinder to a pressure gauge in the observation room, the pull on the coupler can be read directly from the gauge.

About seven years ago tonnage tests were conducted on practically all the Atlantic Region main lines, the dynamometer car which was used being loaned by the Westinghouse Air Brake Co. This car is probably the most elaborately complete piece of locomotive tonnage testing equipment in existence; it automatically records on a chart, in full view of the observers, not only the drawbar pull, but the speed at which the locomotive is travelling, the position of the reverse lever, the amount of throttle opening, the steam pressure in the boiler and even each shovel full of coal which is thrown on the fire. The air brake train line pressure is recorded, and the period and the amount of the reduction for each application of the brakes is shown, so that a complete record is kept of the locomotive driver's operating methods throughout the entire run. The Canadian National Rys. have a dynamometer car in service on each of the three regions and, although they have not the elaborate equipment of the Westinghouse car, they will perform exactly the same functions; the chief difference being that whereas on the Westinghouse car the drawbar pull, speed, etc., are recorded automatically, on the railway cars they have to be noted by observers, at certain intervals of time or distance, and the chart plotted after the completion of the test. This entails more work by the indi-

business car far oftener than for locomotive testing. If it was equipped similarly to the Westinghouse car, it would be practically useless as a business car, whereas the apparatus actually installed does not occupy one inch of floor space and the car's usefulness in other capacities is not interfered with in any way.

Fig. 5. Test of Santa Fe Locomotives.

The only instruments which are visible in the observation room are 2 pressure gauges which indicate the drawbar pull and the buff, the speed indicator, and the air brake recording gauge. The pressure gauge dials are graduated to show drawbar pull or buff from zero to 75,000 lb., and the oil is piped in such a way that by opening one cock and closing another both gauges will register drawbar pull or both register buff as required. This feature is very convenient in the event

grade at a speed of 30 miles an hour and made full use of its momentum. It would be difficult to improve on this locomotive driver's method of operating his locomotive; the whole of the grade was taken on a full throttle and the reverse lever dropped down notch by notch as required. If the wheels had not momentarily slipped on five different occasions, on a bad piece of rail, the speed would not have dropped below 7 miles an hour, which is the maximum speed at which

this class of power can be expected to develop full tractive effort (see fig. 1). The tonnage rating in effect for this subdivision is shown on an earlier page, and it will be seen that the rating for a 65% locomotive with 30-ton cars is 1,820 tons; the loading of the test train was within 1% of this figure and was handled with a slight reserve of power to spare, therefore, the test sustains the rating as correct.

In the majority of cases a dynamometer test will prove the theoretical rating to be correct, but occasionally it

shows that some adjustment is necessary, and in some rare instances the test may have to be repeated. A test train which is very much over or under the correct loading does not give any reliable data on which to work, and in order to establish a tonnage rating definitely, the loading of test train must be very close to the correct tonnage.

The foregoing paper was read before the Engineering Institute of Canada's maritime branch, at St. John, N.B., recently.

Birthdays of Transportation Men in December.

Many happy returns of the day to:—

A. G. Albertsen, Manager, Royal Mail Steam Packet Co., San Francisco, Cal., born at Copenhagen, Denmark, Dec. 31, 1887.

G. F. Ancrum, Treasurer, Headquarters and Subsidiary Companies' Accounts, Canadian National Rys., Montreal, born at Bristol, Eng., Dec. 9, 1872.

J. H. Barber, ex-Division Engineer, Toronto Terminals Division, Ontario District, C.P.R., Toronto, who has retired on pension, born at Cobourg, Ont., Dec. 20, 1856.

W. E. G. Bishop, Division Freight Agent, Canadian National Rys., North Bay, Ont., born at Central Clarence, N.S., Dec. 4, 1888.

H. E. Bissell, Right of Way Department, Canadian National Rys., Winnipeg, born near Noyan, Que., Dec. 31, 1867.

N. E. Brooks, ex-Engineer, Maintenance of Way, Western Lines, C.P.R., now at Sherbrooke, Que., born there, Dec. 25, 1866.

W. W. Butler, President, Canadian Car & Foundry Co., Montreal, born at Danville, Ohio, Dec. 9, 1862.

J. M. Cameron, General Superintendent, Alberta District, C.P.R., Calgary, born at Lochaber, N.S., Dec. 18, 1867.

W. E. Campbell, Chief Traffic Officer, Board of Railway Commissioners, Ottawa, born at Mount Vernon, Ont., Dec. 19, 1882.

W. C. Casey, General Agent, Passenger Department, Ocean Traffic, C.P.R., Winnipeg, born at Moncton, N.B., Dec. 12, 1882.

G. W. Caye, Purchasing Agent, Canadian National Rys., Montreal, born at Malone, N.Y., Dec. 1, 1865.

R. J. Foreman, Foreign Freight Agent, Canadian National Rys., Montreal, born at Toronto, Dec. 31, 1878.

A. H. Foster, Manager, Brantford Municipal Ry., Brantford, Ont., born at Guelph, Ont., Dec. 24, 1888.

W. H. Gardiner, City Freight Agent, C.P.R., and District Freight Agent, Esquimalt & Nanaimo Ry., Victoria, B.C., born there, Dec. 6, 1859.

A. J. Gorrie, ex-Superintendent District 1, Transcontinental Division, Canadian Government Rys., Quebec, now of Montreal, born at Raith, Kirkcaldy, Scotland, Dec. 10, 1868.

F. P. Gutelius, Resident Vice President, Delaware & Hudson Rd., Montreal, formerly General Manager, Canadian Government Rys., born at Mifflinburg, Pa., Dec. 21, 1864.

J. T. Hallisey, Superintendent, Halifax Division, Atlantic Region, Canadian National Rys., Halifax, N.S., born at Beaver Bank, N.S., Dec. 29, 1862.

D. B. Hanna, ex-President, Canadian National Rys., Canadian Government Merchant Marine Ltd., etc., Toronto,

born at Thornliebank, Scotland, Dec. 20, 1858.

H. E. Heal, Canadian Passenger Agent, Pennsylvania Rd., Toronto, born at Bowmanville, Ont., Dec. 17, 1891.

J. J. Hennigar, District Freight Agent, Great Lakes Transportation Co., Windsor, Ont., born at Topeka, Kan., Dec. 21, 1884.

H. C. Holloway, Locomotive Foreman, Canadian National Rys., North Gate, Sask., born at Granby, Que., Dec. 6, 1869.

C. E. Jenney, General Agent, Passenger Department, Canadian National-Grand Trunk Rys., New York, N.Y., born at Fergus, Ont., Dec. 31, 1873.

W. J. Kelly, Superintendent of Telegraphs and Telephones, Timiskaming & Northern Ontario Ry., North Bay, Ont., born at Renfrew, Ont., Dec. 17, 1875.

L. S. Landers, Division Engineer, Canadian National Rys., Edmundston, N.B., born at Farnham, Que., Dec. 15, 1888.

J. M. MacArthur, Superintendent, Medicine Hat Division, Alberta District, C.P.R., Medicine Hat, Alta., born at Toronto, Dec. 8, 1885.

A. McCowan, Assistant General Superintendent, Car Equipment, Western Region, Canadian National Rys., Winnipeg, born at Perth, Scotland, Dec. 5, 1868.

J. T. McGrath, ex-Master Mechanic, G.T.R., Battle Creek, Mich., now of Bloomington, Ill., born at Toronto, Dec. 6, 1869.

A. T. McKean, Division Freight Agent, C.P.R., Calgary, Alta., born at St. John, N.B., Dec. 18, 1886.

Capt. R. McKillop, Superintendent, Bruce Division, Ontario District, C.P.R., Toronto, born at Perth, Scotland, Dec. 26, 1884.

A. D. MacTier, Vice President, Eastern Lines, C.P.R., Montreal, born at Blairgowrie, Scotland, Dec. 27, 1867.

Alfred Price, ex-General Manager, Eastern Lines, C.P.R., Montreal, born at Toronto, Dec. 6, 1861.

W. J. Radford, Assistant Manager, Toronto Suburban Ry., Toronto, born at Boldre, Hants, Eng., Dec. 23, 1870.

G. D. Robinson, ex-European Freight Agent, Canadian Pacific Ocean Services Ltd., Montreal, born at St. John, N.B., Dec. 7, 1877.

H. J. Russell, General Manager, Newfoundland Government Railway, St. John's, Nfld., born at Musgrave Harbor, Nfld., Dec. 24, 1891.

H. W. Sharpe, Superintendent of Motive Power, Quebec District, Central Region, Canadian National Rys., Quebec, Que., born at Campbellton, N.B., Dec. 6, 1869.

G. E. Smart, Chief of Car Equipment, Canadian National Rys., Montreal, born at Edinburgh, Scotland, Dec. 23, 1873.

M. F. Tompkins, General Freight Agent, Atlantic Region, Canadian National Rys., Moncton, N.B., born at Margaree, N.S., Dec. 6, 1878.

C. B. Trites, Assistant Superintendent Pensions and Relief, Canadian National Rys., Moncton, N.B., born there, Dec. 26, 1877.

H. H. Vaughan, ex-Assistant to Vice President, C.P.R., now consulting engineer, Montreal, born at Forest Hill, Essex, Eng., Dec. 26, 1868.

R. C. Vaughan, Director of Purchases and Stores, Canadian National Rys., Montreal, born at Toronto, Dec. 1, 1883.

A. P. Walker, Assistant District Engineer, Ontario District, C.P.R., Toronto, born at West Hartlepool, Eng., Dec. 9, 1860.

E. B. Walker, Electrical Engineer, Bureau of Economics, Canadian National Rys., Montreal, born at Toronto, Dec. 15, 1879.

H. H. Ward, Deputy Minister of Labor, Ottawa, born at Arkona, Ont., Dec. 17, 1884.

J. B. Way, Freight and Ticket Agent, C.P.R., Sault Ste. Marie, Ont., born at Port Hope, Ont., Dec. 10, 1865.

W. E. Weegar, Superintendent, Barrie Division, Southwestern District, Central Region, Canadian National Rys., Allandale, Ont., born in Stormont County, Ont., Dec. 17, 1870.

Michigan Central Canadian Passenger Trains Speed.

A St. Thomas, Ont., press report stated that a new M.C.R. passenger train, no. 47, made its initial trip between New York and Chicago on Sept. 30, passing over the Canada Division, and that it was very fast, covering the division in about 5 hours. We are officially advised that train 47, consisting entirely of Pullman cars, has been operated during the past 4 or 5 years as second section of no. 17, and that no material change has been made in its equipment. As to the reference to its speed, we are advised that the average speed of M.C.R. passenger trains is no greater in Canada than in the U.S., but the fact of their Pullman ones being operated over the Canada Division with a stop at St. Thomas only makes the running time seem comparatively short, and often when trains are received late from the New York Central Lines at Buffalo, considerable time is made up between there and Detroit. The M.C.R. Canada Division timetable has a special rule placing a speed limitation of 70 miles an hour on passenger trains. Train no. 47 leaves Buffalo at 4 a.m. daily, arrives at St. Thomas, 123.64 miles from Buffalo, at 6.29 a.m., leaves St. Thomas at 6.34 a.m., and arrives at Detroit, 236.01 miles from Buffalo, at 8.45 a.m. Thus, the schedule time for the 236.01 miles is 285 minutes, and the running time 280 minutes.

J. D. McDonald, formerly General Passenger and Baggage Agent, Canadian National Rys., Chicago, who retired on pension in March, 1923, in remitting his renewal subscription to Canadian Railway and Marine World, writes: "Now that I have retired from active railway work, I feel all the more need of your valuable publication, to keep posted on Canadian railways, in which I shall always be interested."

Wawa Hotel Fire Suit.—The mother of a pantry maid who is assumed to have lost her life in the Wawa Hotel disaster, in the Lake of Bays district of Ontario, on Aug. 19, has issued a writ claiming damages from the Canada Railway News Co., which owned the hotel.

Railway Operating Revenues, Expenses and Other Statistics for August.

The following comparative table for August, 1923 and 1922, has been arranged in Canadian Railway and Marine World's office, from information supplied by the Dominion Bureau of Statistics, Transportation Branch. The figures in the column headed "All railways" include all steam railways with an annual operating revenue of \$500,000 and over. There has been no change in the roads operating, but the 1922 figures, given in the reports this year, include certain revisions, and are not in all cases the same as reported in 1922.

The column headed "Canadian National" gives the figures for the combined steam railways in Canada, under

the Canadian National Ry. Co's directors' management, including the former Canadian Northern System, the Intercolonial, Prince Edward Island, National Transcontinental and other Canadian Government Rys., the Hudson Bay Ry. and the Grand Trunk Ry. of Canada and the Grand Trunk Pacific Ry. It includes all G.T.R. lines in Canada and 36.16 miles in the U.S.A., viz.: Champlain & St. Lawrence Ry., 1.21 miles; United States & Province Line Ry., 9.77 miles, and Black Rock terminal. It does not include other lines in New England, nor lines west of the Detroit and St. Clair Rivers.

The column headed "Canadian Pacific" includes also the Montreal & Atlantic

and Esquimalt & Nanaimo Rys.

The first six items under the heading "Operating revenues" includes rail lines only and not water lines. Freight and passenger train miles contain a proportion of mixed train miles, divided on the basis of freight and passenger car miles in mixed train service. Total train miles include freight; passenger, with their proportions of mixed train miles; special train and non revenue train miles. The average freight revenue per freight train miles includes only rail line revenue. Average passenger train revenue per passenger train miles includes revenue from passenger, mail, express, baggage, parlor cars, etc.

	All Railways.		Canadian National.		Canadian Pacific.

Two C.P.R. Sectionmen Were Fined \$25 each and costs, and a third was let go on suspended sentence on pleading guilty, at Portage la Prairie, Man., re-

cently for wilfully obstructing the C.P.R. right of way on Sept. 22. They were returning to Burnside on a hand car, when they were struck by a freight

train, one of them being seriously injured. The Imperial Limited was due to pass about the time, and a serious accident might have resulted.

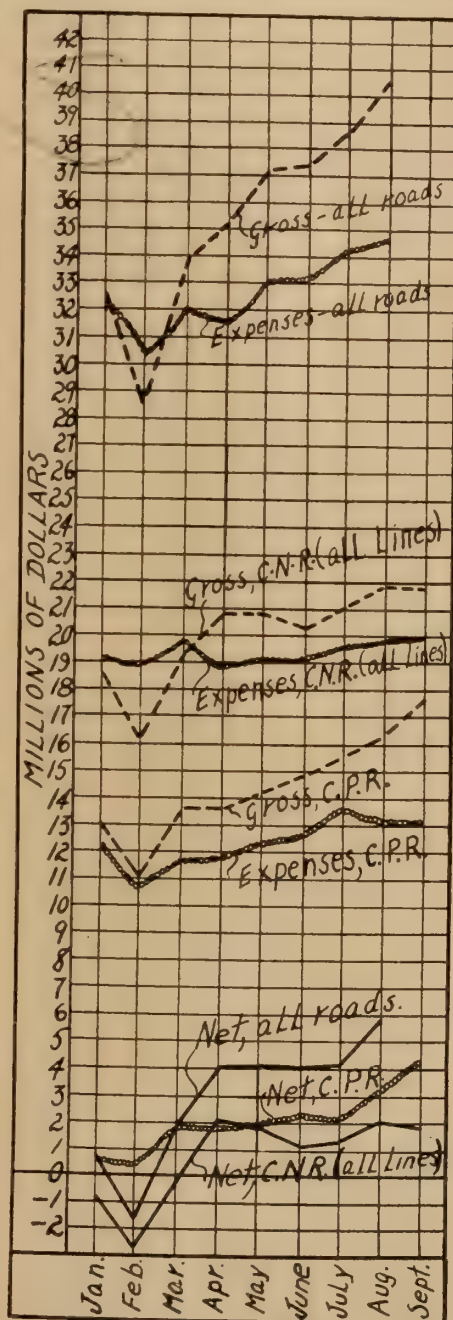

Railway Operating Revenues, Expenses and Other Statistics.

The table of figures on page 570 gives the revenue, expenses, net earnings and operating statistics for Canadian railways having operating revenues of over \$500,000 a year, as a whole, and separately for the Canadian National and Canadian Pacific, as furnished by the Dominion Bureau of Statistics, Transportation Branch. Tables of railway earnings and expenses on page 572 give the Canadian National and Canadian Pacific financial results to and including September, and also approximate results for October, as furnished by the managements. These tables are accompanied by others compiled from figures supplied by the Dominion Bureau of Statistics, Transportation Branch, for the Canadian National Rys.' Canadian lines, Duluth, Winnipeg & Pacific, Grand Trunk Western, and New England lines, separately for August, and for Canadian railways as a whole, the Canadian National and Canadian U.S. lines, and the Canadian Pacific, during the first eight months of 1923. In considering Canadian National results, it is important to bear in mind that the figures for August, in the table on page 570, relate only to the Canadian portion of the system, which is defined in detail in the introduction to the table, while in the table on page 572 the whole system is covered, with the minor exceptions noted.

All Railways.—For the first time in a long while the operating revenues of one month may be directly compared with those for the same month of the preceding year, this being the case as concerns Aug. 1923 and Aug. 1922. Heretofore, increases or decreases in freight or passenger rates have made direct comparison impossible. The table of August results on page 570 shows that for all railways, freight traffic increased 2.6%, and freight traffic revenue increased by \$1,158,774, or 4.9%. The greater increase in freight traffic revenue than in freight traffic, while rates were on the same basis, is presumably due to differences in the nature of the traffic carried. Passenger traffic for all roads was 6.6% heavier than in Aug. 1922, and in addition, showed a considerable seasonal increase over July, being 27% heavier. Passenger traffic revenue was 11.6% more than in Aug. 1922. Total revenues were \$2,388,047, or 6.2%, more than in Aug. 1922, while operating expenses were but \$871,962, or 2.6%, more, which resulted in net earnings being \$1,516,085 greater than in Aug. 1922, and which, in turn, resulted in reduction of operating ratio of from 88.60 to 85.54. The increase in operating expenses which occurred in August this year, compared with Aug. 1922, was more than accounted for by the increase in the payroll, amounting to \$1,789,903, or 8.6%. The number of employees in Aug. 1923 was 7.4% more than in Aug. 1922, so that evidently the remuneration per employee was about on the same basis as in Aug. 1922.

The statement on page 572 of the financial results secured by the railways as a whole for the first 8 months of this year shows that operating revenues were much greater than for the corresponding period of 1922, and that operating expenses, while showing a considerable increase, were not increased to the same extent as the revenues, which explains the improvement of \$6,516,086 in net earnings. The financial progress in 1923 of the railways collectively and the Canadian National and Canadian Pacific

individually is illustrated in the accompanying diagram, which shows that the gross earnings for all the railways have been increasing steadily since February. Only in one month this year have the railways collectively failed to have net earnings, viz., February, when the operating deficit was \$1,821,424. Net earnings in January and the months following February totalled \$23,209,284 at the

Canadian Railways' Gross Earnings, Operating Expenses and Net Earnings, first 9 months of 1923.

end of August, compared with \$16,693,198 in the first 8 months of 1922.

The Canadian National Rys. (Canadian lines only, as mentioned in the introduction to the table of August results on page 570) freight traffic decreased 0.6% in Aug. 1923, compared with Aug. 1922, but freight traffic revenue for the month was \$422,207, or 3.8% more than in Aug. 1922. While passenger traffic showed little change, passenger traffic earnings increased \$472,906, or 12.5%. Total

revenues increased \$1,033,271, or 5.9%, while operating expenses increased only \$321,346, or 1.9%, which resulted in an increase of \$711,924 in net earnings and a reduction in operating ratio of from 97.32 in Aug. 1922 to 93.64 in Aug. 1923. A conspicuous feature of the Canadian National August figures is the large empty car mileage in relation to the loaded car mileage, viz., 25,662,313 empty car miles, against 49,609,090 loaded car miles, and 19,274,154 empty car miles in Aug. 1922. This is no doubt explained in great part by the preparation for the western grain movement, speeded up in anticipation of the heavy crop to be moved. In September, as shown by the table covering all Canadian National lines, on page 572, while gross earnings decreased \$66,183, operating expenses decreased \$218,741, which produced an increase in net earnings of \$152,558.

A most conspicuous feature of Canadian National Railways financial results so far this year has been the remarkable success enjoyed by the Grand Trunk Western lines. In fact, as shown by the statement on page 572, the Canadian lines had a deficit of \$1,051,387 for the 8 months period, and it is due only to the fact that the Grand Trunk Western has had such good results that the system as a whole had substantial net earnings for the period. These net earnings for the whole system, \$5,011,845, compare with an operating deficit of \$1,166,098 for the first 8 months of 1922, so that considerable improvement is evident, although conditions would be more gratifying if Canadian lines were contributing more to net earnings. However, as the deficit of \$1,051,387 on Canadian lines for the first 8 months of this year is to be compared with a deficit of \$4,689,139 in the corresponding period of 1922, it is evident that there has been considerable improvement on the Canadian lines also.

The accompanying chart shows that the C.N.R., all lines, had operating deficits in January, February and March, but that in every month since, net earnings were secured. The deficits in the first 3 months of the year were due to the Canadian lines, which, however, have not had deficits since the end of March, but the net earnings in April, May, June, July and August were not sufficient to wipe out the deficits of the first three months, the net deficit for the period being as stated above.

Canadian Pacific.—In August, as shown by the table on page 570, the C.P.R. experienced a slight decline in freight traffic, compared with Aug. 1922, but freight traffic revenue increased 2.6%, and passenger traffic revenue increased 9.5%. Total revenues increased \$630,892, or 3.9%, and total operating expenses increased only \$339,747, or 2.6%, with the result that net earnings increased \$291,945, and the operating ratio was reduced from 81.97 to 80.91. In September, however, as shown by the figures on page 572, net earnings suffered a decline as compared with those of Sept. 1922, with the result that the net to the end of September was \$56,925 less than for the corresponding period of 1922. The accompanying chart shows that the C.P.R. has been increasing its gross and net month by month since the end of February, and in view of the fact that a large western crop, which is a little later than usual, has to be moved, it is not unreasonable to suppose that the company will stand a good chance of

deriving net earnings in the last three months of this year which will make the total net for 1923 better than that for 1922.

General.—From the various figures presented it is evident that, so far as the Canadian National and the railways collectively are concerned, some improvement as compared with 1922 has been secured. It must be noted, however, that the C.P.R., to the end of September, did not show as good results as secured in 1922. As before pointed out in these columns, the improvement on Canadian National Canadian lines is no doubt chiefly due to there having been opportunities for it which the C.P.R. did not have, while the improvement on Canadian National lines in the U.S. is but characteristic of the great betterment which has taken place in the financial returns being secured by U.S. railways generally. U.S. railways have not experienced as severe rate reductions as have the Canadian, and, handling a record-breaking traffic, and having finally rid themselves of the effects of Federal control, the improvement is not to be wondered at. Some encouragement may be derived from what improvement has been accomplished on Canadian lines, but at the same time it is well to remember that the Canadian National operating ratio is still away up in the nineties, and that the C.P.R. net earnings for the first 8 months of this year do not begin to approach those of corresponding periods in such years as 1916 and 1917. It must also be remembered that if this country is to grow and prosper as it should, large expenditures for additional railway facilities will have to be made, and the less the railways can contribute out of earnings, the more will have to be borrowed. With conditions as they are, and in view of the Board of Railway Commissioners having recently ordered a reduction in export rates on westbound grain, the present seems no time to be talking wage increases or further rate reductions.

Railway Grade Separation in Toronto.

The City of Toronto applied to the Board of Railway Commissioners in February last for an order directing the Canadian Pacific and Canadian National Rys. to collaborate with the city in the preparation of a joint plan for the separation of grades at the C.P.R. and C.N.R. crossings at Bloor St., Royce Ave., Weston Road and St. Clair Ave., and at the C.N.R. crossings at Wallace Ave. and Davenport Road, and to fix a time for submission to the Board of a plan dealing with grade separation at the crossings. Chief Commissioner Carvell, at a hearing in Toronto in February, expressed the opinion that the Board was without power to direct the railways to collaborate, and had jurisdiction only in the case of definite plans being prepared. Following the hearing, a conference was held, at which it was agreed that the matter stand over for a time, on the understanding that the railways would join the city in the preparation of tentative plans, to be presented to the Board. Since that time, railway and city representatives have discussed the matter on different occasions. The Board has advised the Toronto city authorities that a hearing will be held there on Jan. 8, 1924, when the city and the railways will be called upon to submit their proposals.

Railway Earnings and Expenses.

All Canadian Railways.

The Dominion Bureau of Statistics, Transportation Branch, has issued the following statement for all Canadian railways for the 8 months, Jan. 1 to Aug. 31:—

	1923	1922
Operating revenues	\$286,805,062.97	\$263,539,821.93
Operating expenses	263,595,778.64	246,846,623.82
Net operating revenues	23,209,284.33	16,693,198.11

Canadian National Railways.

The following table was compiled by Canadian Railway and Marine World from statements supplied by the Canadian National Rys. management. We are officially advised that the figures show the earnings and expenses of the Canadian Northern Ry. system, including Duluth, Winnipeg & Pacific Ry.; Canadian Government Rys., including Intercolonial and Prince Edward Island Rys., and various local lines in the maritime provinces and Quebec which have been acquired by the Dominion Government; Grand Trunk Pacific Ry.; Grand Trunk Ry. lines both in Canada and the United States, but not Central Vermont Ry. or electric lines. They also include the express and hotel departments and a number of subsidiary companies, the names of which are not given, but not car ferries and steamboats, nor the telegraph department.

U.S. lines.....	6,063,232.93	3,523,040.66
Total	\$5,011,845.49	Dr.\$1,166,098.51

The C.N.R. Publicity Department has issued a statement from which the following figures are

taken:—Gross earnings for September decreased \$66,184 from Sept. 1922; operating expenses for September, however, decreased \$218,741, so that net earnings for the month were \$152,558 more than for Sept. 1922. Net earnings for the first 9 months of 1923 were \$6,857,816, compared with \$527,314 for the first 9 months of 1922. The improvement in net earnings from operation in the 9 months period was, therefore, \$6,330,502.

The C.N.R. Publicity Department further states that gross earnings for October were \$26,391,991, or \$1,407,682 over those for Oct. 1922, and that gross earnings from Jan. 1 to Oct. 31 were \$207,950,222, an increase of \$18,588,567 over the same period in 1922.

Canadian Pacific Railway.

Following are monthly gross earnings, working expenses and net profits for 1923, compared with those for 1922. The discrepancies between these figures and those issued by the Dominion Bureau of Statistics are owing to the fact that the Bureau is, at its request, furnished with figures by the C.P.R., including the Esquimalt & Nanaimo Ry., and the Montreal & Atlantic Ry. earnings, as well as the C.P.R. ones. The figures supplied the Bureau are exclusive of certain income items which are included in figures supplied Canadian Railway and Marine World:—

	Gross	Expenses	Net	Increase or decrease
Jan.	\$13,148,914	\$12,428,888	\$ 720,026	\$ 236,549

C.P.R. approximate gross earnings for October, \$23,543,000, an increase of \$691,000 over Oct. 1922.

The Dominion Bureau of Statistics, Transportation Branch, has issued the following statement for C.P.R. lines for 8 months from Jan. 1 to Aug. 31:—

	1923	1922
Operating revenues	\$112,938,967.90	\$108,232,426.23
Operating expenses	99,602,503.10	93,370,605.16
Net operating revenues	13,336,464.80	14,861,921.07

United States Railways' Financial Results.

U.S. class 1 railways had \$92,238,400 net operating income in September, equivalent to an annual rate of return of 4.46% on their tentative valuation, compared with 2.90% in Sept. 1922. The September returns were a little below those of August, when the net operating income, \$98,381,200, was representative of an annual return of 4.94% on tentative valuation. Operating revenues in September were \$545,502,700, an increase of about 6% over Sept. 1922, and operating expenses were \$415,983,500, an increase of 2% over Sept. 1922.

For the 9 months ended Sept. 30, U.S. class 1 railways' net operating income was \$718,948,600, equivalent to an annual rate of return of 5.27%. This was an increase of \$189,478,920 over the first 9 months of 1922, when the equivalent annual rate of return was 3.96%.

A feature of the September operations is that the western U.S. railways, which up to the end of August had been experiencing very unfavorable earnings, did much better, the equivalent annual rate of return earned by this group being 4.86% for the month. This was, no doubt, due in great part to heavy traffic caused by crop movements. The eastern roads did not do so well as in preceding months, earning at the annual rate of only 3.93% in September, while the southern roads continued to derive favorable earnings, their equivalent annual rate for the month being 5.2%.

Freight Rates and Rolling Stock for Alberta Coal for Ontario.

M. J. Butler, C.M.G., LL.B., of Oakville, Ont., at one time Deputy Minister of Railways and Canals, read the following paper before the Engineering Institute of Canada's Toronto branch, Nov. 8:—Is it possible to allocate to freight service, the costs per train mile, as distinguished from passenger service? Prof. William Z. Ripley, in Railroad Rates and Regulations, states: "So many expenditures are incurred indiscriminately on behalf of the service as a whole, being an indispensable condition for operation of the property at all, that no logical distinction of expenses, even as between passenger and freight traffic, is possible." If this is true, and it is usually accepted by authorities, how then are we to say just what rate of freight will prove to be profitable? It seems to show that there is a way whereby we may fairly estimate, that if we succeed in earning, on a new business the average train mile earnings, we shall at least have a rational basis to work with. There is one measure of effective operation, and that is to concentrate in the train load the maximum number of tons, the physical character of the railway will carry, to provide locomotives powerful enough to haul the heaviest trains, to provide cars of large capacity so as to keep down the dead load to a minimum, and run all such trains solid from division point to division point, allocating the locomotives and cars exclusively to the special business. Prof. Ripley also says: "The train load is generally adopted today as the unit of operation, measuring the cost of the service. It is a fact that, within certain limits, the cost of handling a train does not vary greatly with its capacity. Eaton, in his Railroad Operations, concludes that from 30 to 50% of cost is independent of the train load. The effect is that any increment in the paying load very materially decreases the cost of operation per ton."

We have in the Canadian National Rys. a great system, with, at present, insufficient traffic offering to adequately meet the enormous fixed charges. Yet in Alberta there are very large fields of high class coal and in Ontario a market for a very large business: the ideal long haul, that will justify a special equipment, and enable a steady uniform flow of heavy tonnage. To quote from Professor Ripley, under somewhat similar conditions, a rate must be named that will secure the business, "And one comfort may be uncovered in so doing. The lowered rate may so stimulate new business and enlarge the volume of traffic, that it may be handled at much lower cost. In fact, this consideration alone, in absence of all competition, may induce a lowering of rates at certain points out of line with the general schedule. This incentive, conditioned by the fact of increasing returns, is always in the background. The destiny of many places is manifested in terms beyond the control of the carrier. Soil may be poor, climate or population adverse to progress, but some particular places enjoy peculiar advantages for growth. Not to stimulate new business at these points where traffic might be cultivated, even without rivals in the field, is little better than allowing it to escape over a competitor's line of rails, were they present. So indisputably has this law that an expanding volume of business up to a certain point may profitably be carried at a continuously lowered cost, been proved, that it is estimated, by so competent an authority as

the Engineering Review, that, provided sufficient tonnage be available for 2,000-ton freight train loads, a cost of one mill per ton-mile can be attained. This, of course, does not imply that any railway in actual operation, carrying all kinds of freight, including a large proportion of local traffic, can in the immediate future hope to attain this result. It is intended only to show that, provided the volume of traffic be large enough, the cost of operation tends to decline as a matter of course, until a congestion for the existing plants has been reached. At this point a new cycle of costs of operations and profits makes its appearance. There is in effect, but one principle that actuates traffic officers in naming a rate, and that is, what will the traffic bear?"

The rates quoted by the Canadian National Rys. General Traffic Manager, Mr. Dalrymple, are prohibitory and evidently were made with the purpose of prohibiting bringing Alberta coal to Ontario points, the temporary rates named by Sir Henry Thornton, while reasonable from the experimental standpoint, with the inadequate equipment in use, will not be profitable to the railway.

It would seem to be the part of wisdom to learn what is being done elsewhere in the way of equipment provided, where, the conditions are sufficiently parallel, i.e., a larger steady low grade traffic to be moved from point of production, the mines, to the point of shipment, on the lakes or seaboard. The Great Northern owns 69 Mallet locomotives. Locomotive 2,022 handled a 16,000-ton train of ore over a 114-mile division in 6½ hours; grades 0.4%, and one grade of 0.6%. The Chesapeake and Ohio, the Norfolk and Western and the Illinois Central coal roads, are well equipped with Mallet type locomotives, steel coal cars of 50, 75, 80, 100 and 120-ton capacity. The Virginian Ry., a coal road, in 1920, operating 523.57 miles, hauled 100 120-ton cars of coal from Princeton, W. Va., to Roanoke, Va. The standard train is 8,500 tons of mixed cars, but the grades, with the locomotives owned, can handle 15,000 tons when sufficient empty and load brakes are available to get them down a 1.5% grade. They have 14 miles of 0.6% grades against the loaded movement over the Allegheny mountains. The maximum grade, other than this, in the direction of loaded traffic is 0.2%. They have two sections of 1.5% grade, one 8 miles long, and one 11 miles long, in the direction of the empty movements. Rolling stock owned to handle the freight consists of the following:—

		Traction power	
Consolidated,	2-8-0	29,400 lb. each.....	8
Mikado, M.A.,	2-8-2	45,200 " ".....	6
Mikado, M.B.,	2-8-2	56,000 " ".....	42
Mikado, M.C.,	2-8-2	60,800 " ".....	18
Mallet, A.A.,	2-6-6-0	70,800 " ".....	4
Mallet, A.C.,	2-6-6-0	90,000 " ".....	8
Mallet, A.B.,	2-8-8-2	97,400 " ".....	1
Mallet, A.D.,	2-8-8-2	115,000 " ".....	6
Mallet, U.S.,	2-8-8-2	101,250 " ".....	20
Mallet, A.E.,	2-10-10-2	166,300 " ".....	10
Triplex,	2-8-8-8-4	166,300 " ".....	1
Cars in freight service are as follows:			
Box,	80,000 lb.....		536
Flat,	80,000 lb.....		186
Stock,	80,000 lb.....		848
Flat bottom gondolas,	218,000 lb.....		574
Flat bottom gondolas,	105,000 lb.....		2,985
Hopper coal,	100,000 lb.....		148
Hopper steel coal,	105,000 lb.....		2,176
Hopper steel coal,	110,000 lb.....		999
Flat bottom steel coal,	110,000 lb.....		993
Total			7,875
Capacity, Dec. 31, 1920, 512,330 tons.			
The quantity of coal handled in the year was:			
Anthracite, 9,686 tons; bituminous, 7,145,731 tons.			
Mileage of loaded freight cars north			
and east.....			53,126,394

Mileage of loaded freight cars south and west.....	2,583,540
Mileage of empty freight cars north and east.....	415,944
Mileage of empty freight cars south and west.....	50,895,227

This shows a practically one-way load with returned empties.

The approximate distance from Alberta coal fields to Toronto, all rail, is 2,500 miles, according to the evidence of Mr. Mallory given before the House of Commons committee. The average length of division on the Canadian National is 137.5 miles. Good practice shows that solid through trains may be safely run through two divisions a day, or 275 miles, at an average speed of 15 miles an hour, changing crews only at division points. The time the train is in motion is, say, 18 hours; number of divisions, 16; total time required for such a train, 144 hours. Twelve hours may be added for incidentals, making 156 hours from coal spur to a Toronto yard.

To start with, two trains a day would be the minimum business that would fairly test the possibility of a profitable business. What equipment would be required for a service of two trains a day? With 16 divisions to cover, two trains a day, 64 locomotives would be required. As locomotives must be shopped for repairs from time to time, an addition must be made of, say, 6, making 70 locomotives to be provided of the 2-8-8-2 class with a tractive power of 101,250 lb. each. Allowing 16 lb. a ton to cover resistance of train load, this type of locomotive would handle a gross train load of 6,300 tons. If 75-ton coal cars are used, the dead weight of the car is 32.5 tons and the weight of car loaded is 107.5 tons each, or a train of 58 cars, with 4,350 tons of coal.

The gross earnings necessary to be had in order that the business may be profitable to the railway should be about \$5 a train-mile, hence we get, allowing 5,000 train-miles per 4,350 tons of coal, an average price or cost of \$5.75 a ton. If, however, the railway seeks to carry on this business using the mikado locomotives with an average tractive power of 60,800 lb. and with 50-ton coal cars, the gross weight of the train would be 3,800 tons, or say, 53 cars, and 2,650 tons of coal, and the cost would be, on the same basis, \$9.43 a ton.

It will be necessary to provide, to handle two trains a day using 75-ton cars:

2,000 cars at \$4,000 each.....	\$ 8,000,000
70/2-8-8-2 Mallet locomotives at \$90,000 each	6,300,000

Total equipment..... \$14,300,000

The necessary vans, it is assumed, are already available.

A total of 8,700 tons of coal a day would be delivered in the Toronto district and not less than 300 days a year would be devoted to it, thus bringing forward 2,610,000 tons of coal. Needless to remark, the coal, to bear so heavy a transportation charge, must be of the best quality, and compare favorably with the best anthracite coal on the market, and the price at the mines f.o.b. cars, must be on an economical basis, comparable with Pennsylvania mining costs.

The hauling capacity of this type of Mallet locomotive westbound, allowing resistance of 20 lb. a ton, would be 5,000 tons; the weight of the returning empties would be about 1,900 tons. It would therefore be practicable to add a con-

siderable number of loaded cars to the extent of limiting length of train that could be safely handled through the passing tracks, yards, etc., thereby reducing the cost per ton of coal by the amount thus earned.

The discussion following the reading of the paper was begun by R. A. C. Henry, Director, Bureau of Economics, Canadian National Rys., who stated that Mr. Butler's contention concerning the practicability of carrying Alberta coal to Ontario was based on six assumptions, viz., that \$5 a train mile is a fair earnings figure for the trains contemplated; that traffic will move regularly throughout the year; that Alberta domestic coal can be successfully transported in open top equipment; that trains can be hauled over all divisions without the necessity of breaking up or terminal switching; that no expenditure additional to that proposed for equipment would be necessary; and that trains could be run solid to a point in Ontario and run back from that point to Alberta without the necessity of the cars being used for further distribution of the coal to Ontario points. Mr. Henry questioned the accuracy of all of these assumptions, and quoted numerous figures abstracted from railway operating statistics to demonstrate that too much had been assumed.

R. L. McIntyre, of the structural steel firm of McGregor & McIntyre, Toronto, who is interested in an Alberta coal mine, spoke at length of the great desirability of keeping Canadian money at home, instead of sending it to the U.S. for coal, and said that coal he had received from Alberta in box cars showed less than 2% deterioration.

H. K. Wicksteed, formerly Chief Engineer of Location, Canadian Northern Ry., spoke of the success met with in the west in burning Alberta coal in a pulverized condition, and predicted great strides in the future in pulverized fuel use.

W. T. Jackman, Professor of Political Economy, Toronto University, while agreeing with the desirability of using Canadian coal if possible, expressed the opinion that the transportation of Alberta coal to Ontario is not feasible, viewed from an economic standpoint, and clearly laid down the principle that the Canadian National Rys. should not be asked to carry commodities for less than cost.

S. B. Wass, Resident Engineer, Toronto Eastern Ry., who had charge of the Canadian National Rys.' Neebing terminal development, near Fort William, Ont., stated that the locomotive terminal facilities on the transcontinental railways in Canada are not suitable for handling Mallet locomotives of the type proposed.

Canadian Motor Train in France.—A special motor train containing samples of Canadian natural and manufactured products has been travelling through France since July 1. The cars, which are drawn along the highways by motors, and are parked for exhibition purposes, reached Paris Oct. 29, where they are expected to remain for two months. Senator C. P. Beaubien is in charge of the exhibition, and on its opening in Paris, he conveyed to the French people a message from Sir Henry Thornton, President Canadian National Rys., in which Sir Henry referred to the opportunities he had during the war as Assistant Director-General of Transportation, of coming in contact with the leaders of the French people. It is reported that the train will be taken to London from Paris.

Board of Railway Commissioners Directed to Enquire Further Into Western Freight Rates.

The following was approved by the Governor-General on Oct. 24 and passed as order in council 2166: The committee of the Privy Council having had under consideration a petition to the Governor in council by the Attorney-General of British Columbia, acting on behalf of that province, and by the Attorney-General of Alberta, acting on behalf of that province, by way of appeal from a general order of the Board of Railway Commissioners for Canada dated June 30, 1922, made as the result of a general investigation and enquiry as to railway rates in Canada recommended by order in council 2434, of Oct. 6, 1920, submits as follows:—

The order appealed against is one made by the Board of Railway Commissioners for Canada, dated June 30, 1922, in consequence of a reference to the Board pursuant to the provisions of order in council 2434, of Oct. 6, 1920, which primarily related, among other things, to the alleged discrimination in freight rates against western Canada as compared with those prevailing in eastern Canada. During the hearing, the Province of British Columbia applied to the Board to be heard, asking that the scale of rates then existing upon the prairies be extended to the Pacific Ocean. It was admitted that the Pacific scale of so-called class and distributing rates was based upon a ratio of one and one-half miles of prairie territory to one mile of Pacific territory. The committee deems it proper to call attention to the provisions of the Railway Act 1919, sec. 52, under which this application was heard, and to observe that while this section confers upon the Governor in council very wide powers as to varying or rescinding any order of the Board, and while the discretion so vested in His Excellency in council in proceedings under this section is not subject therein to any defined limitation, the intent of the legislation is to invest His Excellency in council with judicial powers by which he may in his discretion aid in securing and enforcing the provisions of the Railway Act, having due regard to the method of railway rate regulation by an independent commission, which was the outstanding innovation in the Railway Act of 1903, and which has been preserved throughout succeeding revisions of the act to the present time.

The act of 1903 provided for the creation of a Board of Railway Commissioners, and constituted it a court of record, with all the powers of such a court as to the hearing of witnesses and obtaining of evidence. The members of the Board are peculiarly qualified, by long and varied experience, to deal with the highly technical subjects which come before them, and for the purposes of investigations have available an efficient expert organization and a complete system of statistical and other records accumulated from year to year in the course of their administration of the act's provisions. For these reasons it does not appear to your committee that it is desirable, except under very extraordinary circumstances, that the Governor in council should undertake to re-hear or review the Board's decisions, as to whether upon the facts appearing in the evidence before it in any particular case the provisions of the statute with regard to rates have been complied with. This observa-

tion is particularly pertinent in the present case, which arises out of a general investigation undertaken pursuant to the direction of His Excellency in council.

In the present case it appears that the allegations of the petition and the arguments of counsel representing the petitioners relate wholly to questions of fact and the principles in regard to the regulation of railway rates in Canada under the Board's jurisdiction. The order in question was made as the result of a very thorough enquiry by the Board, extending over more than a year and a half preceding the date of the order, during which hearings took place in all parts of Canada. At such hearings representatives of boards of trade, municipalities, provinces and other interested parties were present or represented, and voluminous exhibits and statements were presented and filed. The judgment upon which the said order was based revised and altered in important respects the rates of toll throughout the Dominion, including the so-called Pacific Scale of rates, which was by it reduced from the ratio of one and one-half miles on the prairies to one mile in Pacific territory, to a ratio of one and one-quarter miles on the prairies to one mile in Pacific territory.

The Province of British Columbia filed a petition to the Governor in council, by way of appeal from this decision of the Board, and later the Province of Alberta was joined as a party to the petition. On the argument, counsel for both of these petitioners were heard in support of the petition, which was opposed by counsel for the Manitoba Government and Winnipeg Board of Trade and for the railway companies interested. One of the main grounds of appeal dealt with on the argument was that regarding export grain rates from Alberta, Saskatchewan and Manitoba to Vancouver and other British Columbia coast points. This matter has been specifically dealt with by order in council 2,007 of Oct. 2, 1923.

The committee, therefore, recommends that all other subjects of complaint referred to in the said petition be also remitted to the Board of Railway Commissioners, to be dealt with as it may deem proper upon the evidence already adduced, and the arguments presented before the Board and your Excellency in council. The committee observes, however, that in view of the vital importance of facilitating the interchange of commodities between the various sections of Canada, railway rates should be maintained at as low a basis as possible, having regard to all proper considerations. Accordingly the committee is of the opinion that in the future, should transportation and traffic conditions so change as to render practicable a nearer approach to equalization of rates as between prairie and Pacific territory, the Board should, in the exercise of its discretion, take such action as may be necessary to bring about this result. All of which is respectfully submitted for approval.

The Brotherhood of Locomotive Firemen and Enginemen's annual meeting, which opens in Winnipeg, Dec. 2, will have as a special feature the celebration of the fiftieth anniversary of the union's foundation.

Canadian Pacific Railway Construction, Betterments, Etc.

New Brunswick Bridges.—The Board of Railway Commissioners has authorized the rebuilding of bridge 78.46 over Middle Shikitihaik River, Shogomoc Subdivision, N.B., and bridge 27.4, St. Stephen Subdivision, N.B.

Eastern Lines Betterments.—Extensive betterments have been made on Eastern Lines this year. They include a subway at Westmount station, Que., the installation of an electrical interlocking plant to control the movements of trains passing to and from Glen yards, and a large new coaling plant at Outremont, Que. Nearly 200 miles of new 100 lb. rails have been laid on the Sherbrooke Subdivision between Megantic and South Stukely and between Vaudreuil and Ottawa, and over 200 miles have been rock ballasted, mostly between Montreal and Toronto. By the close of the season the company will have rock ballast over 700 miles on its eastern lines. Between Megantic and South Stukely, 206 miles of track were replaced by one gang in 20 days. On one day they laid 10 miles of track in 10 hours,

in regard to outlying station buildings and steel bridges. At Montreal, Megantic and Jackfish, large reinforced concrete coaling plants, with capacity of 300 tons each, have replaced the old wooden structures, thus reducing the fire hazard. Ten all-steel water tanks of from 40,000 to 100,000 gall. capacity have been erected at various points. One hundred and twenty-five track miles of the rails released from the main lines were taken into the shops, where the rail ends were sawn off and redrilled for branch line extensions in the west, and for the relaying of branch lines where light rails are in service. This work has also been in progress to an even greater extent at the C.P.R. Winnipeg shops. Other track improvements include the installation of tile drainage, through cuttings on the main line for the improvement of track drainage and strengthening of the road-bed. Other large works undertaken, and not yet completed, are a new passenger station at Fredericton, N.B., and of a freight shed with team delivery tracks at Pembroke, Ont.

pg. 532.)

Leader Southerly Branch.—The Board of Railway Commissioners has authorized the opening for traffic of the section of this branch from Leader, on the Swift Current-Bassano line, between miles 0 and 25.31. (Oct., pg. 483.)

Moose Jaw Southwesterly.—The Board of Railway Commissioners has authorized the carriage of traffic over a portion of this branch, between miles 207.34 and 268.57.

Shuswap Subdivision Bridges.—The Board of Railway Commissioners has authorized the rebuilding of the following bridges on this subdivision, British Columbia District:—No. 26.5, over north fork of Eagle River, present 100 ft. through pony truss span to be replaced by a 100 ft. through plate girder span. No. 37.26, present 150 ft. through truss span to be replaced by heavier span of similar type and size. No. 40.61, over 7th crossing of Eagle River, present 150 ft. through truss span to be replaced by heavier span of similar type and size. No. 65, over Salmon River, present 60 ft.

Canadian Pacific Railway Pier B.C., to be built at Vancouver.

This pier, the building of which, President Beatty announced at Vancouver recently, will be proceeded with at once, will be about 850 ft. long and 331 ft. wide, and will have erected on it 2 double-deck sheds each about 750 ft. long and 100 ft. wide, connected at their outer ends to form a U, and with 4 railway tracks between the two sheds and 2 tracks between each shed and the side of the pier. Sydney E. Junkins Co., Winnipeg and Vancouver, have the contract for both the substructure and superstructure. Another view of the pier, from the water side, was given in Canadian Railway and Marine World for May, pg. 224.

and this with trains continually passing. One mile of the track was changed in 28 minutes. The steel to Ottawa was laid in 27 days. In addition to the laying of the new steel, the track has been completely equipped with tie plates, which gives an added degree of safety. Bridges have been given particular attention, and their renewal to handle the heaviest power between Calumet and Ottawa has enabled the company to cut 45 minutes off the Place Viger-Ottawa time schedule. The renewal operations were commenced last summer, and completed early this autumn, without a single incident which could cause delay to traffic. The creosoting plant at Sudbury has been in operation all summer and delivered over 1,000,000 track and switch ties, which were distributed to various parts of the Eastern Lines. Nine hundred thousand ties are stacked ready to be seasoned and treated by this plant.

The company has carried out an extensive painting programme, especially

Interprovincial & James Bay Ry.—Tracklaying on the extension from near Kipawa, Que., to the Quinze River Falls, with the branch from Gaboury to Ville Marie, are reported to have been completed, and the ballasting and other finishing up work was expected to be finished by Nov. 30. A spur line is being built at the Quinze River, in connection with a power plant which is under construction. It is reported that plans are in preparation for the extension of the line for 32 miles to the Rouyn gold mining area, so that work can be started on it as soon as the Quebec Legislature passes the necessary authority and subsidy. (Nov., pg. 452.)

Tuffnell-Prince Albert Branch.—The Board of Railway Commissioners has approved revised location of this branch between miles 91.82 and 95.80, with permission to cross a number of highways and road allowances, and has authorized its construction across the Canadian National Rys. line at Tisdale, Sask. (Nov.,

half deck plate girder span to be replaced by standard 60 ft. half deck plate girder span.

C.P.R. Colonization Promotion.—The C.P.R. is carrying on an extensive winter lecture campaign in England, Wales and Scotland to promote emigration to Canada. Miss Mackie opened the campaign at Errol, Perthshire, Scotland, Oct. 2, and the meetings were continued by W. L. Payne, of the C.P.R. Publicity Department, London, in Gloucestershire, in the following week. The campaign will also be taken part in by L. P. Thornton, E. S. Williams of the C.P.R. Colonization and Development Department; A. J. Ward, Toronto; Capt. C. E. Hutton, British Columbia, and Mrs. Porteous, Montreal.

The U.S. Coal Commission has recommended government regulation of the coal industry, on the ground that there is in it the same degree of public interest as in the railway industry.

Grain Elevator and Conveyor Galleries for Halifax.

The Department of Trade and Commerce received tenders to Nov. 15 for the erection, for the Railways and Canals Department, of a reinforced concrete and steel grain elevator plant at the Canadian National Rys. ocean terminals at Halifax, N.S., with 1,110,100 bush. storage capacity. The plant will consist of the following units:

A receiving house, 68 x 61 ft. in plan by 178 ft. high, the lower part of which will consist of ground floor, with boot pits for receiving legs, to be built of concrete, while the upper part, or cupola, will be of structural steel, with corrugated metal siding, concrete floors and roof, supported on steel bents, bearing on concrete footings independent of the lower part. The principal equipment will consist of 2 receiving legs and two 2,500 bush. scales, each with one 2,500 bush. garner above. A cleaning house will be incorporated in the lower part of the receiving house, with equipment for cleaning grain and collecting dust.

The storage house, 226 x 70 ft. in plan by 122 ft. high, will consist of 52 circular bins, 16½ ft. diameter by 100 ft. high, each of 17,800 bush. capacity, and 36 interspace bins, each of 5,125 bush. capacity, making a total of 1,110,100 bush. The bins will be completely covered with a 2½ in. concrete floor, resting on steel beams, but not anchored to them in any way. Over the bins there will be three 42 in. belt conveyors, each with a 2-pulley tripper. These conveyors will extend through the shipping and receiving houses. In the storage house basement there will be four 36 in. belt conveyors, with spouts and loaders from each bin.

The shipping house will be 69 ft. 11 in. by 33 ft. 10 in. plan by 140 ft. 8 in. high. The lower part will be of concrete construction, and the upper part will be of structural steel, with corrugated metal siding, and supported on steel columns bearing on the concrete structure. The principal equipment of this house will consist of 4 shipping legs, each of 15,000 bush. capacity, but only 3 of these will be built at first, provision being made for the addition of one more in the future. There will be installed three 1,000 bush. scales, with provision for a fourth to be installed later. Four garners, each of 2,000 bush. capacity, will be installed above, and 4 garners of similar capacity below the scales.

The car unloading plant will consist of a car dumper building of structural steel, with corrugated metal siding and concrete foundations, floors and roof. One mechanical car dumper will be installed at first, with provision for the addition of a second one later. The car dumping machine will be capable of unloading 8 carloads of grain an hour and will be operated by electricity. The car dumper shed will be provided with a pair of power shovels for unloading cars. In addition, there will be track hoppers, belt conveyors and tunnels to the receiving house. There will also be a complete system of conveyor galleries and drive towers, connecting the elevator with the terminal's various shipping piers.

A compressed air system will be installed to blow dust out of motors, and assist in general cleaning in inaccessible places. This system will be extended through the receiving, storage and shipping houses and the conveyor galleries. There will be a complete dust collecting system, for conveying dust from the cleaning machine, floor sweeps, belt conveyor head spouts, and all elevator boots,

to dust collectors located outside the buildings. The dust from the collectors will be spouted to housed in receptacles, from which it will be carried away. The dust collecting system will extend throughout the receiving, storage and shipping houses.

The elevator will be operated by electricity, the current for motors being 550 volts, 60 cycles, 3 phase, while that for lighting will be 110 volts, 60 cycles, single phase.

The plant has been designed by the John S. Metcalf Co., and every effort possible has been made to provide every known safety device, and the necessary equipment for its operation as a first class modern grain elevator.

Canadian Railway and Marine World is advised that the elevator will be built by the Trade and Commerce Department, and not by the Railways and Canals Department, as the Canada Grain Act gives the Trade and Commerce Department power to build elevators, and it has built a number in western Canada which are being operated by the Board of Grain Commissioners. The Dominion Parliament, at its last session, voted \$200,000 towards building an elevator at Halifax, and \$200,000 towards one at Edmonton, Alta., these amounts being included in the Trade and Commerce Department's estimates. As the Railways and Canals Department had plans ready for the Halifax elevator, the Trade and Commerce Department is using them, and as the Railways and Canals Department has engineers, and the Trade and Commerce Department has not, the plan will be built under the Railways and Canals Department engineers' supervision. As possibly the construction, maintenance, and operation of a grain elevator may not be considered within a railway's purview, we are informed that it is probable that the Halifax one will be operated by the Trade and Commerce Department, under the Canada Grain Act, though this policy may be changed later on.

Transportation Events of Twenty-five Years Ago.

From Railway and Shipping World, now Canadian Railway and Marine World, for Dec. 1898.

Allan Steamship Lines adopts St. John, N.B., as winter port.

Richelieu & Ontario Navigation Co's steamboat Toronto completed.

H. D. Lumsden completed survey for C.P.R. Toronto-Sudbury line.

G.T.R. appointments: C. S. Cunningham, Trainmaster, Island Pond, Vt.; J. Irwin, Trainmaster, Detroit, Mich.

J. D. McDonald, City Passenger Agent, G.T.R., Buffalo, N.Y., also appointed City Ticket Agent, Western New York and Pennsylvania Rd. there.

B. C. Gesner appointed General Air Brake Inspector, Intercolonial Ry., Moncton, N.B.

Marriages: F. W. Morse, Superintendent, Motive Power, G.T.R., to Miss G. Bass of Fort Wayne, Ind.; R. S. Logan, Secretary to General Manager, G.T.R., to Miss A. Rankin.

Pembroke Southern Ry., from C.P.R. at Pembroke, to Golden Lake on the Ottawa, Arnprior & Parry Sound Ry., 21 miles, completed.

Quebec Central Ry. built shops at Newington, near Sherbrooke.

Lake Manitoba Ry. & Canal Co. laid

56 miles of track, from Sifton Jct. to Swan Lake District, Man.

Manitoba & Southeastern Ry. laid 46 miles of track from St. Boniface, Man.

Northern Pacific Ry. completed 46½ miles of Souris River branch, Man.

Vermont Legislature authorized reorganization of Central Vermont Rd., to take over old C. V. Rd. after its sale under court decree.

Canadian Customs Department seized 18 locomotives and 1,000 box cars of Canada Atlantic, and Ottawa, Arnprior & Parry Sound Rys., for alleged non-entry and non-payment of customs dues.

M. H. MacLeod, appointed Superintendent, Crowsnest Pass branch, C.P.R.

Montreal Herald published a Thanksgiving Day symposium: "What We Have to be Thankful For." Sir Wm. Van Horne gave the laconic answer: "The Dingley tariff."

C.P.R. and G.T.R., having settled differences, rates were restored and C.P.R. northwestern traffic was resumed between Toronto and North Bay.

President J. R. Booth, of Canada Atlantic Ry., announced that a union station would be built in Ottawa, for the three railways entering there, to cost about \$130,000.

C.P.R. completed Stonewall Branch extension, from Stonewall to Foxton, Man., 18 miles; Pipestone Branch extension, from Reston, Man., 20 miles; Crowsnest Pass Ry., from Lethbridge, Alta., to Kuskanook, B.C., about 290 miles; partly completed, standardizing Columbia Western Ry., between Trail and Rossland, B. C., and completed about 70% of grading and rock work between Rossland and Midway, B.C.

Settlement by U.S. Government of G.T.R.'s Claims.

The U.S. Government, through the U.S. Railroad Administration, made the final payment of \$2,619,525.12, in respect of guarantees to the Grand Trunk Ry.'s U.S. lines on Oct. 3. A payment of \$2,394,500 on account was made in May 1921. We are officially advised that the claims were as follows:—

Grand Trunk Western Ry.....	\$2,171,829.18
Detroit, Grand Haven & Milwaukee Rd.	1,038,545.94
Toledo, Saginaw & Muskegon Ry.....	180,278.57
Pontiac, Oxford & Northern Rd.....	173,700.93
Detroit & Huron Ry.....	19,390.37
Chicago, Detroit & Canada G. T. Jct. Rd.	292,366.84
Michigan Air Line Ry.....	118,191.54
Cincinnati, Saginaw & Mackinaw Rd.	182,762.78
Grand Trunk Milwaukee Car Ferry Co.	66,888.04
Atlantic & St. Lawrence Rd.....	724,523.33
Lewiston & Auburn Rd.....	45,547.60
Total.....	\$5,014,025.12

These claims were made and paid as provided by the Transportation Act, 1920, sec. 209.

Timiskaming & Northern Ontario Ry. Fire Insurance.—As stated in Canadian Railway and Marine World for November, the Commission received tenders to Nov. 1 to provide rate or rates for fire insurance on the whole or portion of its property, for one year and three years, respectively, from Dec. 1. We are officially advised that Irish and Maulson, Toronto, were the successful tenderers.

Stevedore Loots Railway Cars.—John Rusnow, a stevedore, was sentenced to 12 months' imprisonment by the Port Arthur, Ont., Police Magistrate, Oct. 31, for stealing a large quantity of goods from Canadian National Rys. cars. He pleaded guilty, the goods being found at his boarding house.

Canadian National Railways Ask Re-opening of Assigned Coal Car Case.

As stated in Canadian Railway and Marine World for August, the Interstate Commerce Commission, after an enquiry which started in March, issued an order on June 13, forbidding railways in the U.S. to continue their practice of assigning coal cars to such mines as they saw fit, and from dividing cars among mines to suit railway needs, and directing them to pro-rate their cars among all the mines served by their lines. The order concerned bituminous coal only. The Commission's majority decision held that the Interstate Commerce Act, Sec. 1, paragraph 12, did not make the car assigning system previously used by the railways illegal, but said: "The practice of the railways in assigning private cars, and system or foreign-line cars, for railway fuel, to bituminous coal mines, in excess of the ratable share contemporaneously distributed to bituminous coal mines upon their lines, which do not receive assigned cars, is found for the future to be unjust and unreasonable, and unduly and unreasonably prejudicial to mines not receiving assigned cars, and unduly preferential to mines which are furnished such cars in excess of the ratable proportion." As stated in our August issue, the Commission's majority decision was vigorously attacked in a dissenting opinion by Commissioner Potter, who stated the ruling would have the effect of making even worse the present bituminous coal situation in the U.S., where there are twice as many mines as needed, 250,000 more miners than necessary, and wages double what should be paid, the last necessary to enable the miners to get a full week's wage for three days' work.

As was to be expected, the Commission's ruling created a serious situation for the Canadian National Rys., which, on account of their ownership of important mines in Ohio and some 6,000 hopper bottom coal cars, used to transport U.S. bituminous coal from the mines to the Canadian lines, were faced with a situation wherein they would not be free to send their own cars to their own mines, or to other mines from which they had contracted to buy coal, but would be forced to distribute them among many mines. The Canadian National Rys. mines were brought into the system with the G.T.R., and belonged formerly to the Rail & River Coal Co. The G.T.R., at the time of the hearing, had 5,456 hopper bottom coal cars; other Canadian National Rys. lines had a certain number, and 500 more were ordered in the early part of the year, and have been delivered.

In an effort to obtain relief from the conditions brought about by the Commission's ruling, the Canadian National Rys., on Aug. 25, petitioned the Commission for a re-opening of the proceedings and an opportunity of presenting argument. The petition was presented by J. H. Fishback, Washington, and was in part as follows: "The Canadian National Rys. ask that this company, and various other carriers and private car owners who have not been heard in testimony, be afforded opportunity to make known details of car supply, coal supply and costs, and what would be the approximate result in enormously increased prices, based on past experience, as a result of the assigned car rule's abrogation; the serious effects upon locomotive performance when coal has to be drawn from indiscriminate sources instead of from par-

ticular mines producing certain grades of coal suitable for engines of different drafts; enormously added cost of purchasing fuel in the open-market, running into millions of dollars, which must be borne by the consuming public as well as by the railways; the extent to which the Canadian National Rys. contribute, under present methods of car supply, to the distribution of cars in the U.S., assisting materially in car supply of U.S. railways; that the mines in the U.S. not having assigned cars are aided to an important extent through the purchase and use by Canadian railways of their own cars in drawing coal supplies from the U.S.; that coal is stored in larger quantities; that larger storage is not only practicable, but wasteful, and impairs efficiency of fuel; that the Canadian National Rys. mines in the U.S. do not compete with commercial mines." The petition also stated that no complaint was ever made against the use of assigned cars by Canadian railways in acquiring and moving the supply of coal necessary to be obtained for their use from the U.S., and that no injustice ever resulted to anyone from the C.N.R. practice of assigning cars.

It was also pointed out that the Canadian National Rys. could not get coal for their Central Region from eastern or western Canada, except by providing excessive and wasteful transportation; that the investment for mines in the U.S. and for coal cars was made on the strength of former decisions made by the Interstate Commerce Commission, which made the assigning practice permissible; that if the railways had to distribute cars among many mines on a pro rata basis they would have to go into the open market for coal and pay high prices, and that bills introduced in Congress to abolish the assigning system had failed to pass, thus proving that the Government did not consider it to be in the public interest to abolish the custom. It further points out that the Commission had based a decision of some time ago, permitting the custom on the fact that it is a public necessity that the railways have fuel, and that that reason is as good now as it was then; that experience under fuel control, and Federal control, of railways, when the custom was suspended, was that it at once became necessary for railways to confiscate coal at all stages of its trip from mine mouth to destination, introducing a great evil into industry; that the abolition of the car assigning right would not tend to improve car supply, but would make conditions in this respect worse; that cars supplied by Canadian railways for obtaining their own coal are not a part of the coal carrying equipment of U.S. railways; that customs of long standing should not be suddenly ordered stopped, thus making large investments valueless; that the sending of cars into the U.S. by the Canadian National Rys. over a two year period saved U.S. railways from providing 1,200,000 car miles of transportation service which they would have had to provide if Canadian cars had not gone for the coal; that if the cars could not be assigned to the railways' own mines and to other mines with which contracts for coal had been made, coal of inferior quality would have to be bought, and at higher prices; that if the Canadian cars cannot be assigned, more of them will have to be held under load, and

a lot of them will not be sent into the U.S., with the result that there will be brought about a reduction in U.S. railway coal carrying capacity; that only three witnesses representing private car owners were heard at the last proceedings, a strong reason why the case should be re-opened; that the coal hauled in Canadian cars is for railway use and does not come into competition with commercial bituminous coal; that the Commission's order would have the result of encouraging still more mines to open in the U.S., and create still more irregular labor conditions, whereas there are too many mines now and labor conditions are deplorable; that there is no such thing as a coal car shortage in the U.S., except in so far as the railways are not able to supply the demand for cars, which follows strikes in the mines, or the demand occasioned by hundreds of mines opening to operate only during a period of high prices, and that the order would make car conditions worse instead of better; that it would be eminently unfair to expect the railways to make large investments for equipment to meet this very extreme peak demand—equipment which would be idle more than 90% of the time; that the order doing away with the assigned system would render inevitable, in times of emergency, a resort to emergency orders carrying priorities which, in essence, would be an admission of the necessity and utility of the assigned car practice which has been in force in the past. The petition stated that C. G. Bowker, General Manager, Central Region, had testified at the hearing. The Interstate Commerce Commission has announced that oral arguments in the assigned coal car case will be heard in Washington on Dec. 17, 18 and 19, before the full Commission.

New England Railway Consolidation Plans.

In connection with plans for grouping railways in the United States, Canadian railways are to a large extent interested in what is likely to be done in certain areas of the country, and attention is particularly called at present to the New England States, where the matter is being extensively discussed. In that area the Canadian National Rys. are interested through the G.T.R. main line running to Portland, Me., and through control of the Central Vermont Ry., with its terminus in New London, Conn., and its allied line, the Southern New England Ry., which is projected to Providence, R.I. The C.P.R. is also interested because of its route through Maine. The Connecticut Chamber of Commerce directors are reported to have decided to oppose any further consolidation of New England railways by trunk lines leading to the westward, and to favor extensive consolidations which will not sacrifice the principle of competition. The Boston, Mass., Chamber of Commerce, by a vote at the rate of 3 to 1, has reaffirmed its previous decision to urge the Interstate Commerce Commission to adopt a plan for consolidating into one New England system all lines except the Boston & Albany and the Grand Trunk lines.

The recommendation of the joint committee representing the six New England States in their report in June, was to the effect that there be created a New England system by the

consolidation of the New York, New Haven & Hartford, the Boston & Maine, the Maine Central, and the Bangor & Aroostook. This combination would leave the C.P.R., the G.T.R., the Central Vermont Ry. and the Boston & Albany Rd., as they are at present. Of the railways which it is suggested shall be amalgamated into a New England system, three own lines in Canada, in addition, which give connections with the Canadian railway systems, viz.: the Bangor & Aroostook, which owns the Van Buren bridge and railway connection in Canada, 0.21 of a mile, giving connection with the Canadian National at St. Leonards, N.B., where the old International Ry. of New Brunswick from Campbellton terminates, and through which the National Transcontinental passes. The Maine Central owns in Canada the Washington County Rd.'s Princeton Branch, which extends from St. Croix Jct. to Princeton, Me., passing through a corner of New Brunswick, the length of the line in the province being 5.10 miles; it also owns the Hereford Ry., which extends from the International Boundary near Beecher Falls, Vt., to Lime Ridge, Que., 52.18 miles. The Boston & Maine operates, under a lease for 999 years from July 1, 1870, the Massawippi Valley Rd., extending from a junction with the Connecticut & Passumpsic Rivers Rd., at the International Boundary near Beebe Jct., to Lennoxville, Que., 31.95 miles, and a branch from Beebe Jct. to Stanstead, Que., 3.51 miles; and it has trackage rights over the G.T.R. from Lennoxville to Sherbrooke, Que., 2.95 miles. The Connecticut & Passumpsic Rivers Ry., which is leased for 99 years, to the Boston & Lowell Rd. Co., which in turn is leased to the Boston & Maine Rd. Co., owns \$400,000 of the Massawippi Valley Rd. common stock. The Connecticut & Passumpsic Rivers Ry. also owns the entire capital stock of the Newport & Richford Rd., extending from Newport, Vt., to the International Boundary near North Troy, and from East Richford to Richford, Vt., 22 miles, which is leased for 99 years from June 8, 1881, to the Montreal & Atlantic Ry., which is leased by the C.P.R.

Hearings began in Boston on Sept. 24, before Interstate Commerce Commissioners Hall, Eastman and Cox, and all interested were invited to present their views. P. R. Todd, President, Bangor & Aroostook Rd., testified at length, in favor of consolidating New England roads into one group, without trunk line affiliation, and he was followed by others who were of similar opinion. Counsel for the Associated Industries of Massachusetts opposed the New England plan of consolidation, and advocated the arranging of consolidations in such a manner that certain New England roads and certain trunk lines would be amalgamated into groups.

The matter of railway consolidation has apparently aroused more interest in the New England States than elsewhere in the U.S. A United States contemporary, in discussing the matter editorially recently, said:—"The question of a general consolidation of American railroads is a false alarm. It affords men of an academic turn of mind a whole lot to talk about, but the American public know little about it and care less. The idea was incorporated into the Transportation Act through some trick of the radical minority in Congress, and it will probably die a natural death, for it was not well born and it has no place in the minds of intelligent and busy people."

Canadian Railway and Marine World is inclined to agree with the recently expressed views of Sir William M. Acworth, whose long experience as a student of railway affairs has made him

an authority of international standing, that the principal U.S. railway systems are already large enough to secure all the economies that are practicable with large scale enterprise.

A. R. A. Efficiency Programme Results and Canadian Comparisons.

The American Railway Association meeting in New York on April 5, adopted resolutions with a view to increasing transportation efficiency on U.S. railways, as follows: 1. That by Oct. 1 cars in bad order be reduced to 5% of total. 2. That by Oct. 1 locomotives awaiting

programme was approved by the Association of Railway Executives.

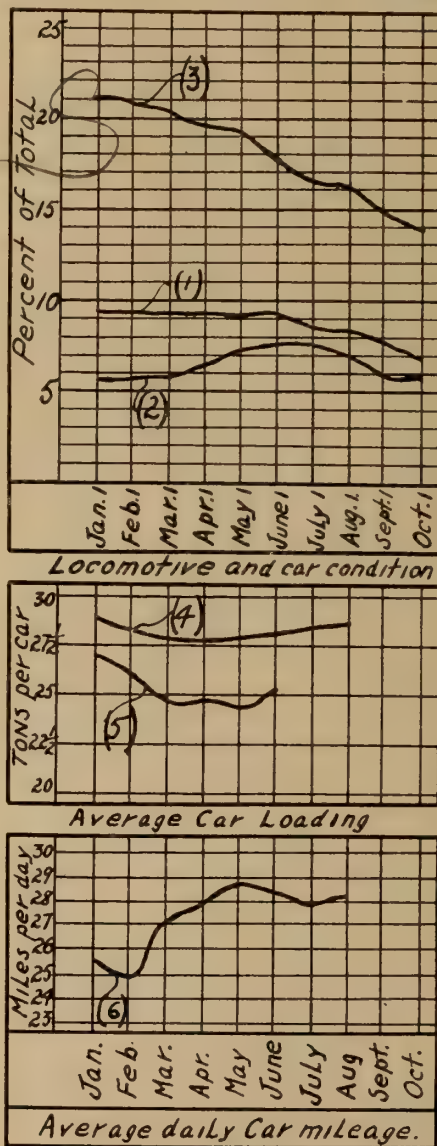

The accompanying charts show the U.S. railways' performance as concerns bad order freight cars, bad order locomotives, average freight car loading, and average freight car daily mileage. Canadian railways' performance as concerns bad order cars and average car loading is also shown. Figures showing locomotive condition and freight car daily mileage for Canadian roads for the months concerned, are not available.

Curve 1 shows the U.S. railways bad order car situation, and that the objective set was not accomplished. By Oct. 1 the number of bad order cars on U.S. railways had been reduced to 6.7%, but as at Jan. 1 the percentage was 9.5, and was over 12 a few months previously, the improvement effected was great. Curve 2 shows that the percentage of bad order cars in Canada has been much less than in the U.S., that for Canadian railways being only 5.8 on Oct. 1. Curve 3, showing the percentage of locomotives on U.S. railways requiring heavy repairs, shows that the object sought in the efficiency programme was accomplished, the number of locomotives requiring heavy repairs being reduced to 13.7% of the total by Oct. 1. Curve 4 shows that the objective of 30 tons a car was not accomplished to the end of August, but a comparison with curve 5, showing the average car loading on Canadian lines, shows that the average loading on U.S. lines is much heavier. Curve 6 shows that the objective of 30 miles a car per day was not attained to the end of August.

In storage of coal for railway use, and other matters included in the programme, good results were secured by U.S. railways, and when the vast freight tonnage handled by U.S. roads during the past 8 months is considered, the degree of success met with in carrying out the transportation efficiency programme must be considered highly gratifying.

C.P.R. Signalman Cleared.—H. K. Honeysett, C.P.R. signalman at Calgary, Alta., was charged with being intoxicated while on duty on Second St. East, there, on Sept. 15. The case was tried before Mr. Justice Tweedie and a jury, Oct. 18, and a verdict of not guilty was given. In discharging Honeysett, the judge is reported to have said that not only had his name been cleared, but he was leaving the court without a stain on his character, as it was quite evident that he had not been drinking at that or any other time.

Indian Railways have adopted a new method of compiling statistics, which combine both English and U.S. methods. On the whole, the U.S. Interstate Commerce Commission's standards have been more closely adhered to than have the British ones, which is doubtless due to the fact that conditions on Indian railways are more similar to those on North American railways than to those in Great Britain.

heavy repairs be reduced to 15% of total. 3. That railways complete storage of coal for railway use by Sept. 1. 4. That as little power and equipment as possible be used by railways in construction and maintenance work after Sept. 1, in order to have the maximum available for commercial traffic. 5. That shippers be encouraged to move as much coal and ore as possible via the lakes early in season. 6. That road and building construction be encouraged as early in season as possible. 7. That the public be impressed with necessity for prompt release of cars, and that efforts be made to increase average car load to 30 tons. 8. That efforts be made to increase mileage per car per day to 30. This pro-

Orders by Board of Railway Commission for Canada.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed the paper have a complete record of the Board's proceedings. No other paper has done this.

Important traffic orders made by the Board are given in full on another page of this issue.

General order 384. Oct. 10.—Directing that current rates on grain and grain products to Pacific coast ports for export be reduced uniformly 10% not later than Oct. 22, 1923. This order, and the judgment on which it was based, were given in full in Canadian Railway and Marine World for November.

34,241. Sept. 28.—Authorizing Canadian National Rys. to enter H. Cairns and J. P. Stinson's lands to remove obstructions to view at crossing of William St., Cobourg, Ont.

34,242. Sept. 26.—Authorizing Canadian National Rys. to open for traffic, its second main line between Twin City and Kakabeka Falls, Ont., 10.31 miles.

34,243. Sept. 26.—Declaring that for the present, Brantford & Hamilton Electric Ry. crossing near Ancaster, Ont., is protected to Board's satisfaction.

34,244. Sept. 28.—Ordering Canadian National Rys. to maintain speed limitation of 10 miles an hour over Old Toll Road crossing near Brantford, Ont.

34,245. Sept. 27.—Ordering that all switching movements over crossing of St. Dominique St., Jonquiere, Que., by Canadian National Rys. be flagged across by train and switching crews.

34,246. Sept. 28.—Declaring that for the present, C.P.R. crossing near Colborne station, Ont., is protected to Board's satisfaction.

34,247. Sept. 26.—Approving location of Nipissing Central Ry. station at Kirkland Lake, Ont.

34,248. Sept. 28.—Approving location of Canadian National Rys. freight and passenger shelter at Abbott, Sask.

34,249. Sept. 26.—Authorizing British Columbia Public Works Department to build highway crossing over C.P.R. at mile 1.076 west of Kamloops.

34,250. Sept. 29.—Refusing application of Canadian Starch Co., Island No. 2, Fort William, Ont., for an order authorizing the use of the spur into their property by the Canadian National Rys., the applicant's factory and dock being now served by connection from C.P.R.

34,251. Sept. 25.—Declaring that for the present the crossing of Beach Road, about 6 miles from Hamilton, Ont., by Hamilton Radial Electric Ry. is protected to the Board's satisfaction.

34,252. Oct. 2.—Authorizing Canadian National Rys. to open for traffic line between Lintlaw and Kelvington, Sask., mile 100.3 to 114.1, Preceville Subdivision.

34,253. Oct. 1.—Declaring that for the present the crossing of Talbot Road, Maidstone, Ont., by Windsor, Essex & Lake Shore Rapid Ry. is protected to the Board's satisfaction.

34,254. Oct. 1.—Authorizing C.P.R. to build spur for John Sloan & Co. across Bridgeman Ave., Toronto.

34,255. Oct. 2.—Authorizing reconstruction of viaduct on Galt St., Sherbrooke, Que., on the C.P.R.

34,256. Oct. 4.—Authorizing Canadian National Rys. to build additional track across public road in Lot 12, Con. 2, Thurlow Tp., Hastings County, Ont.

34,257. Oct. 3.—Amending order 34,220, Sept. 25, 1923, approving proposed location of Inter-provincial & James Bay Ry. station at Angliers, by correcting mileage to read 69.02, instead of 69.05.

34,258. Oct. 3.—Authorizing C.P.R. to build its Tuffnell-Prince Albert Branch across Canadian National Rys. Humboldt Section in Sec. 21, Tp. 34, Range 13, West 2nd Meridian, Sask.

34,259. Oct. 3.—Approving location of proposed C.P.R. station at Wadena, Sask.

34,260. Oct. 4.—Authorizing Nipissing Central Ry. to build bridge across Amikougami Creek, on its Swastika-Wendigo Lake extension.

34,261. Oct. 4.—Authorizing Canadian National Rys. to build passing track across public road between Lots 24 and 25, Concession 3, Seymour Tp., Northumberland County, Ont.

34,262. Oct. 3.—Amending order 34,226, Sept. 25, 1923, authorizing Winnipeg Electric Ry. to cross C.P.R. tracks on Academy Road, Winnipeg, by providing that Winnipeg Electric Ry. pay the whole cost of half-interlocking plant to be installed.

34,263. Oct. 4.—Declaring that for the present the crossing of Parent Road, Ford City, Ont., by Canadian National Rys., is protected to the Board's satisfaction.

34,264. Oct. 3.—Amending order 31,813, Nov. 24, 1921, by removing speed limitation of 12 miles an hour imposed thereunder in operation of trains over the portion of the Canadian National Rys. Melfort Northerly Branch from a junction with its railway near Melfort, to Ridgedale, Sask., mile 0 to 23.7.

34,265. Oct. 4.—Authorizing Niagara, St. Catharines & Toronto Ry. to build spur into Crawford & Marty's premises, south of Lowell Ave., St. Catharines, Ont.

34,266. Oct. 3.—Declaring that for the present the Canadian National Rys. crossing of highway 10 poles east of mile post 460, just east of Duro, Sask., is protected to the Board's satisfaction.

34,267. Oct. 4.—Declaring that for the present the first crossing west of Burlington, Ont., over the Canadian National Rys. is protected to the Board's satisfaction.

34,268. Oct. 4.—Declaring that for the present the first crossing west of Oakville, Ont., on the Canadian National Rys. is protected to the Board's satisfaction.

34,269. Oct. 5.—Amending order 34,229, Sept. 25, 1923, authorizing Winnipeg Electric Ry. to cross Canadian National Rys. on Academy Road, Winnipeg, by providing that Winnipeg Electric pay the whole cost of half-interlocking plant to be installed.

34,270. Oct. 5.—Amending order 34,227, Sept. 25, 1923, authorizing Winnipeg Electric Ry. to cross Midland Ry. on Academy Road, Winnipeg, by providing that Winnipeg Electric Ry. pay whole cost of half-interlocking plant to be installed.

34,271. Oct. 5.—Refusing National Dairy Council of Canada's application for an order requiring that ice cream mix and bulk evaporated milk be carried by express under commodity cream tariffs.

34,272. Oct. 5.—Relieving Canadian National Rys. from fencing between certain mileages in North Parkdale, Newmarket, and Barrie, Ont.

34,273. Oct. 4.—Authorizing Canadian National Rys. to open for traffic the connection of its line with Canadian Northern Ontario Ry. near Nipissing Junction, Ont.

34,274. Oct. 4.—Authorizing Canadian National Rys. to connect their line with Canadian Northern Ontario Ry. near Nipissing Jct., Ont.

34,275. Oct. 4.—Approving location of portion of C.P.R. Tuffnell-Prince Albert Branch from mile 94.26 to mile 211.14, and authorizing a number of highway crossings on it.

34,276. Oct. 5.—Approving location of Canadian National Rys. station at Longlac, Ont.

34,277. Oct. 5.—Authorizing Canadian National Rys. to open for traffic second track of its main line between miles 2.74 and 6.10, Kashabowie Subdivision, Port Arthur Division, Ont.

34,278. Oct. 5.—Declaring that for the present the crossing of St. Pierre Road just east of St. Constant station, Que., by C.P.R., is protected to the Board's satisfaction.

34,279. Oct. 8.—Authorizing C.P.R. to build spur for Hudson Ice Co., Hudson, P.Q.

34,280. Oct. 5.—Authorizing Canadian National Rys. to build spur for Ford Motor Co. of Canada, across Sandwich St., Ford City, Ont.

34,281. Oct. 5.—Dismissing application of Plunkett & Savage, Calgary, and Scott National, Ltd., Medicine Hat, Alta., with regard to express rates on fresh vegetables from points of production in British Columbia and Alberta.

Transportation of Alberta Coal to Ontario.

When the transporting of Alberta domestic coal to Ontario was first proposed, Canadian Railway and Marine World expressed the opinion that such transportation would be uneconomical, and that the use of that coal in Ontario is not commercially feasible. On another page of this issue is a paper by M. J. Butler, at one time Deputy Minister of Railways, who apparently believes that Alberta domestic coal can be economically carried to Ontario, provided some \$14,000,000 be spent in the acquisition of special equipment, but his arguments have failed to change our opinions as mentioned above. After reading the paper in Toronto recently, Mr. Butler made some reference to people digging pools of prejudice and wallowing in them. While we do not agree with his conclusions concerning the transportation of Alberta coal, we certainly plead innocent to any charge of being prejudiced. We realize the great desirability of using Canadian coal and of keeping the money in the country, but, in our opinion, it would cost too much to carry Alberta coal to Ontario to make it worth while.

Mr. Butler's assumption that earnings of \$5 a train mile, on 6,300-ton trains, would be profitable to Canadian railways is not reasonable. In Aug. 1923, Canadian railways as a whole had average earnings of \$5.21 a freight train mile, and the average net tonnage of freight trains operated in that month was 404.2 tons. The net tonnage of the trains proposed by Mr. Butler is 4,350 tons. How unreasonable to assume fair earnings for the latter train as \$5 a train mile, when for the average train hauled today it is over \$5! We are acquainted with Prof. Ripley's statements as quoted by Mr. Butler, and also with the passage quoted from Eaton's "Railroad Operation," and realize that there is a lot of truth in them, but to use those statements to attempt to justify the \$5 earnings assumed is, to say the least, misleading. It may be that the cost of operating a freight train does not vary directly, or anywhere near directly, with tonnage, but to assume that earnings of \$5 a train mile for a 4,350 net ton train hauled by a 2-8-8-0 Mallet locomotive would be profitable because such earnings are profitable (or at least prevent the operating ratio exceeding 100%) for a 404 net ton train hauled by an ordinary consolidation or mikado locomotive, is to assume altogether too much.

Our contention is that the costs of operating such a large train would be so much greater than those of operating an average train, that \$5 a train mile would not begin to meet them. It may be safely said that such a heavy train would go into detention frequently, particularly in winter, making for high labor costs. The expenditure for fuel for a Mallet hauling a 4,350 net ton train would be much greater than for a consolidation or mikado hauling a 404 net ton train. The average freight train hauled on Canadian railways in August consisted of 33 cars, 21.8 loads and 11.2 empties, while Mr. Butler's theoretical train would consist of 58 cars, which would make a big difference in equipment maintenance costs. If these costs for each of these cars were the same as for each car in the present day train, equipment maintenance for the train would be correspondingly increased. But these 75-ton cars would be of steel construction, and the rate of deterioration in their steel sheets has been found to be rapid, which would increase equip-

ment maintenance costs more than correspondingly, or else a high rate of depreciation would have to be figured on. The cost of maintaining large 2-8-8-0 Mallet locomotives could not be expected to be as low as for the locomotives now in use. Taking the items of interest and depreciation alone, and comparing the train of Mallet locomotive and 58 steel coal cars to the average trains now operating, it is at once evident how unfair it is to assume that one train should earn only as much as the other.

It would be difficult to determine to just what degree the heavy axle loads proposed would affect the track structure, but it is certain that material increases in maintenance of way expense would result from the operation of the equipment specified. It taxes the ingenuity of roadmasters and section foremen to keep track to line and surface, even with the present equipment, particularly when frost is coming out of the ground and shims are being taken out, and with loaded cars of 107.5 tons pounding the joints in a steady procession, it seems reasonable to believe that a large demand for the services of numerous extra gangs would soon arise. The type of equipment proposed may be entirely suited to 100 lb. steel, on oak ties set in rock ballast, on a subgrade which has been undergoing improvement and solidification for half a century, but it would be a different matter on the long stretches of muskeg over which the coal trains would have to pass. The additional maintenance of way expense would demand earnings of much over \$5 a train mile to make the business profitable. It should not require further argument to demonstrate that earnings of \$5 a train mile for the trains proposed would be entirely inadequate.

We also think that Mr. Butler is assuming too much when he talks about an average daily movement of 275 miles for his locomotives and cars. The American Railway Association tried for several months last summer to increase average daily car mileage to 30, but was unable to accomplish its object. Of course, Mr. Butler's idea is to handle his coal carrying equipment in a straight run from Alberta to some Ontario point, presumably Toronto, and right back again, and thus cut out all the terminal delay which is the greatest factor in keeping down daily car mileage. But for the reason that the tonnage ratings vary materially on every division of a transcontinental road, the proposed scheme of straight trainload handling from mines to consuming point is impracticable, and a lot of setting out, picking up and switching would be necessary. A 275-mile daily movement may not sound large, but from what we know of railway conditions in Canada, and particularly in that portion of it lying north of Lake Superior, the schedule proposed by Mr. Butler for his equipment movement appears extremely visionary. While reading his paper, Mr. Butler referred to Henderson's "Cost of Locomotive Operation," and stated that it had been developed in that book that 15 m.p.h. is the most economical speed and, in addition, is the speed at which the most transportation can be turned out. We are well acquainted with that book, and wish to point out that in an example given therein, 15 m.p.h. was determined as the best speed, for a given set of conditions, but it is possible that for the conditions proposed in connection with this coal movement, 15 m.p.h. would be the most uneconomical speed.

Even if the equipment could be given the main line movement proposed, it must be borne in mind that the coal transported would not all be used at one point in Ontario. The question would then be whether to use the same cars to distribute the coal to hundreds of towns and villages throughout the province, or to trans-ship it at a central point for further distribution. If the big coal cars were used, it would probably take as long to get them back to the central point as it would to bring them from Alberta, and if the coal was trans-shipped and distributed in other cars, the cost would be prohibitive. We presume that all shipments from Alberta would not come from the one mine, or even one mining district, which would mean that the equipment would have to be distributed at that end of the run, and there is no doubt that the time required for the distribution and collection of cars in the mining country would be considerable. The effect of the delays indicated would be that the proposed expenditure for equipment would have to be at least doubled, which would mean that much more interest and depreciation chargeable against the coal traffic.

There is grave doubt as to the ability of Alberta domestic coal to stand the trip east in open top equipment. As stated in Canadian Railway and Marine World for September, H. Stutchbury, Trade Commissioner for Alberta, when before the House of Commons Committee investigating the fuel question, said: "It would not be possible to ship many of our coals, which are quite suitable for this market, to Ontario in open cars. We could not use the big U.S. gondolas."

As pointed out by S. B. Wass, Resident Engineer, Toronto Eastern Ry., in the discussion following the reading of Mr. Butler's paper, the locomotive terminal facilities, notably locomotive houses and turntables, on Canadian transcontinental roads, are not suitable for handling the large Mallet locomotives proposed.

Mr. Butler's reference to the possibility of reducing the cost of hauling Alberta coal by adding a few cars of revenue freight to the westbound empties is misleading. The situation is that the preponderance of transcontinental traffic is eastbound, and that the railways are always short of freight to fill up the empties for westbound movement, so that no economy is possible in the direction indicated.

Mr. Butler's statement that "the rates quoted by the Traffic Manager of the Canadian National Rys., Mr. Dalrymple, are prohibitory, and evidently were made with the purpose of prohibiting bringing Alberta coal to Ontario points," seems entirely unjustified. Mr. Butler, in making that statement, indirectly accuses Mr. Dalrymple of discouraging the growth of traffic and intentionally standing in the way of the country's development. We think that Mr. Dalrymple was entirely justified in naming a rate which would be remunerative, and that in so doing he was only carrying out his duty of participating in the operation of the National railways as a business proposition and not as a convenience for certain business interests. He would be as much justified in putting in less-than-cost rates for every commodity handled as he would be in putting in such a rate for Alberta coal.

On the whole, while we admire the interest which Mr. Butler has taken in this matter, and give him every credit for attempting to work out a method by which Canadian industry may be devel-

oped, we are certain that in the present stage in the development of the science of railroading his proposed efforts to apply the operating conditions and methods of the Virginian Ry. to Canadian transcontinental hauls would meet with failure, and that while his scheme may seem theoretically possible under the ideal conditions assumed, it would certainly not work out in practice.

The Inland Water Freight Rates Act, 1923, Should be Repealed.

In our November issue, and elsewhere in this issue, we have described the manner in which the Dominion Government, after staging a remarkable exhibition of how not to practice the science of Government, and after having placed Parliament and itself in perhaps the most humiliating position ever occupied by either in the annals of responsible government in Canada, has finally succeeded in rescuing the western farmers from the position in which it placed them, by devising a method by which foreign commercial interests can evade a Canadian law. The bonds of indemnity given, to protect U.S. ship owners who have been invited to freely violate the spirit of the Inland Water Freight Rates Act, 1923, form the concluding chapter of what is, perhaps, the most outstanding exhibition of blind, uninformed, bungling action in the annals of civil government. It must indeed come as a blow to the pride of all Canadians who think anything of their country, to realize that the men they elected to govern them have been responsible for sending representatives to a foreign country, to try to induce private citizens of that country to enter Canadian commerce and to violate a Canadian statute, and to confer with those private citizens as to how they could be best protected in that violation. Nevertheless, that is the case, and the past cannot be recalled. But it is to be hoped that the future will never see the repetition of such an incident—as regrettable as it was outrageous.

As pointed out in previous issues of Canadian Railway and Marine World, the Inland Water Freight Rates Act, 1923, was wholly ill-conceived legislation, and an error from the start. We have pointed out in detail just why the legislation was ill-conceived. We will not go into detail here, but will confine ourselves to stating the general principle that government measures cannot improve on full and free competition as a regulator of those branches of commerce in which competition is naturally the controlling factor, and to further stating that the events of the past two months in connection with the Inland Water Freight Rates Act amply establish the accuracy of our contention.

If any member of Parliament is at all hazy as to the fundamental laws of economics, particularly as concerns their relationship to government regulation of industry, and if any member of Parliament be in doubt as to the consensus of public opinion, which is generally right, concerning the advisability of attempting to regulate lake shipping, let him hark back to the numerous attempts to pass the Armstrong bill. For the seventh time, attempts were made to pass this bill when it appeared as no. 54 of the 1921 Parliament, but this attempt was no more successful than those made previously, for the simple reason that thought and discussion had definitely established that the measure would be

subversive of the fundamental principle governing the shipping industry, and that it would work infinitely more harm than good. If any member of Parliament has any doubt as to the consensus of public opinion in the United States concerning government regulation of the shipping industry, let him regard the U.S. law, which states: "Nor shall the (Interstate Commerce) Commission have the right to establish any route, classification, rate, fare or charge, when the transportation is wholly by water. . . ." If any member of Parliament be in doubt as to the Inland Water Freight Rates Act's injurious effects on the interests of the farmers and the grain trade, let him compare the rates existing before the Government found a way to allow the U.S. ship owners to evade the law, with those existing after that way had been found. And if any member be sincerely desirous of restoring to Parliament the prestige and respect of which the Government's action has tended to rob it, and if he be desirous of seeing that Canada receives efficient government, let him, at the beginning of the next session, advocate the immediate repeal of the Inland Water Freight Rates Act, 1923, and the restoring of the Great Lakes shipping industry to a basis of free and open competition, where it belongs.

Another Political Interferer Not Wanted.

In connection with a recent rumor that Hon. F. B. McCurdy, of Halifax, ex-Dominion Minister of Public Works, would be a Conservative candidate at one of the bye elections in Nova Scotia, it is gratifying to know that so far he has not been nominated, and Canadian Railway and Marine World hopes that he will not be. He is too strong a believer in the spoils belonging to the victors, and, soon after his entry into a former Dominion Government, began attempting to interfere in regard to appointments on the Canadian Government Rys. and the management of the Canadian Government Merchant Marine, representing on the Conservative side the views that Hon. E. M. Macdonald, of Pictou, N.S., does on the Liberal side.

"All Go by National."

The above was the heading of what was undoubtedly a paid "reader" which appeared in a Toronto daily newspaper recently, boosting the Canadian National Rys.' Montreal-Toronto-Vancouver route. When there is so much to be said truthfully about that route, why make such a silly statement? Surely the writer of it could not have imagined that people would believe that the Canadian Pacific had ceased to do a transcontinental passenger business, and that its passenger officials were in the position of having to say, "Yes, we have no" passengers "this morning."

Railway Valuation and Rate Making.

The contention that the many millions of dollars spent by the United States in valuing its privately-owned railways, chiefly for rate making purposes, has been a waste of money, may be regarded as incorrect. Analysis of the whole matter, however, shows that any valuations made will have a most doubtful value as a basis for rates, and the question naturally arises: If railway valuation is necessary for rate making, how is it that the Interstate Commerce Commission, like the Board of Railway Commissioners for Canada, has been able to determine the reasonableness of railway rates throughout the last 20 years?

The Railways' Alternative Plan for Toronto Grade Separation.

The question of railway grade separation along Toronto's waterfront has been prominent for many years. In June, 1909, the Board of Railway Commissioners passed order 7,200, for the construction of a viaduct from west of John St. to or near Berkeley St., a 4-track structure, to be built jointly by the C.P.R. and the G.T.R. In addition, the C.P.R. was ordered to elevate, independently, its tracks from the easterly end of the proposed viaduct, to Queen St., and the G.T.R. was ordered to elevate its tracks from the same point, to Logan Ave. The city was ordered, in addition to paying one-third the cost of the viaducts, to pay the same proportion of the expense of elevating the C.P.R. passenger car yard, the G.T.R. Don sorting yard, the bridges at Spadina Ave. and John St., in the west, and at Eastern Ave., in the east, and for the substructure of the new union station. The railways, to determine the Board's jurisdiction and power to issue such an order, took the matter to the courts, the final judgment being that the Board was within its jurisdiction and that the order stand. After further negotiation between the city and the railways, and the Toronto Harbor Commission, which was formed to administer the city's waterfront property, it was decided that a 4-track structure would not be sufficient for the traffic, and a 6-track one was decided on. The Board issued order 16,019, Feb. 22, 1912, embodying the change, and on July 18, 1912, it issued order 17,034, calling for immediate beginning of construction.

Construction, however, was not started, and on July 29, 1913, after further conferences among the interested parties, an agreement was arrived at, and an entirely new set of plans was prepared. The Board was applied to for an order to give effect to the agreement and to authorize the construction of the track elevation proposed. As all parties were agreed, the Board passed order 19,926, July 31, 1913, accordingly. By this July, 1913, agreement, there was to be no change in conditions west of Bathurst St. At Bathurst St. the tracks were to commence to ascend on a 4/10% gradient, and to reach the viaduct level at York St., from where easterly to the Don River the line was to be level, the elevated base of rail to be 18 ft. above the then base of rail. To the immediate north of the tracks, between Spadina Ave. and York St., the plans provided for an elevated passenger car yard, of 12 tracks, approached by a ladder track from each end. The Spadina Ave. bridge was to be raised 5 ft., and to be lengthened from 700 to 770 ft., and the John St. bridge was to be raised 11 ft. At John St., between the through tracks and the G.T.R. passenger car yard, the station tracks were to lead off in a double ladder, provision being made for 10 passenger and 2 freight tracks through the station. At John St., leads to the C.P.R. passenger and freight car yard, at viaduct level, were to lead off to the south. York St. was to be carried under the tracks in a long subway. There were to be 7 tracks on the viaduct from Bathurst St. to the passenger car yard at York St., and 4 through tracks south of the new station. Bay St. was to be carried under the easterly end of the station tracks, and the through tracks, by a subway. From Bay St. the station tracks were to converge through double ladders to the northerly of the through tracks at Church St. The only portion of the viaduct to

be built with concrete retaining walls was to be between Yonge and Scott Sts., the rest to be all earth embankment. From the new station east there were to be 6 through tracks, crossing all streets on viaducts. From the station east, the tracks were to swing south of the present main tracks, on land to be reclaimed by the Harbor Commissioners, with a right of way 230 ft. wide, giving an embankment width at the top of 85 ft. At Cherry St. the G.T.R. right of way was to be again struck, the through tracks following the south side of the former right of way, with a new Don exit for the C.P.R. line provided, the two lines continuing together to near the Don River, and the C.P.R. branching north along the west bank there. This C.P.R. line was to commence to descend at Cherry St., on a 0.44% grade. The Queen St. bridge was to remain, and an overhead bridge was to be provided at Eastern Ave. The G.T.R. tracks, from the point where the C.P.R. tracks left them, were to continue across the Don River, on a 120 ft. double girder slab floor bridge, swing to the north as far as Queen St. through a 40% deg. angle on a 1 deg. curve, thence follow a short tangent to a reverse curve, ascend from the Don on a 0.4% grade to Queen St., and run level to Logan Ave., where the former grade would be again reached. Both Eastern Ave. and Queen St. were to be carried under the tracks. An estimate made in 1913, placed the quantity of earth required for the complete viaduct undertaking as 3,500,000 cu. yds., and the cost, including the new station, as \$14,000,000.

Consequent on the war and the period of violent inflation accompanying and following it, construction was postponed, and nothing in the way of track elevation was done, although the new union station was completed. Toronto people have, however, kept the track elevation project in the forefront, and have reminded the railways, from time to time, of the agreement entered into. The C.N.R., having absorbed the G.T.R., were looked to to carry out the latter road's obligations. On Nov. 15 the railways made a definite proposition to the city, and presented an alternative plan to that provided for by the July, 1913, agreement. This plan, for the working out of which M. H. McLeod, Consulting Officer to the Executive, Canadian National Rys., is chiefly responsible, contemplates the providing of bridges across the tracks at Yonge St. and the streets west of it, instead of track elevation, and the construction of the viaduct, to all intents and purposes exactly as agreed upon in 1913, east of Yonge St. This plan was presented by E. W. Beatty, President, Canadian Pacific Ry., Sir Henry Thornton, President, Canadian National Rys., and Mr. McLeod, on Nov. 15, at a conference at Toronto city hall, at which the Mayor, members of the Board of Control, the harbor commissioners, Board of Trade officers, S. J. Hungerford, Vice President, Operation and Construction Department, Canadian National Rys., and J. M. R. Fairbairn, Chief Engineer, C.P.R., were also present. Mr. McLeod showed plans indicating the salient features of the railways' proposals, and promised to furnish the city authorities with more detailed plans within a week.

Following is a summary of the alternative plans proposed by the railways from west to east: At Bathurst St., the pres-

ent bridge, a comparatively new steel one, to remain. The present Spadina Ave. bridge to be replaced by one 64 ft. wide over all, and including two 25 ft. roadways, and two 5 ft. sidewalks, and to be approached on a 4% grade at both ends. The present bridge at John St., which has a roadway 31 ft. 8½ in. wide, and two 6 ft. sidewalks, and the approaches to which at both ends have 4% grades, will remain. The present York St. bridge has a 3.6% grade approach from Front St., and 4% from south of the tracks. It will be replaced by one 56 ft. wide over all, including a 38 ft. roadway and two 8 ft. sidewalks, and to have a 3.6% grade approach from Front St. and 4% from south of the tracks. At Bay St. a new bridge to be built, 64 ft. wide, c. to c. of girders, including two 22 ft. roadways and two 8 ft. sidewalks, with 4% grade approaches at each end. At Yonge St. a new bridge to be built, 64 ft. wide, c. to c. of outside girders, including two 22 ft. roadways, and two 8 ft. sidewalks, with a 3.5% approach from Yonge St. and 4% from the south end. The tracks, yards, locomotive house and industrial spurs west of Yonge St. to remain at their present level. The tracks to start to rise at Yonge St., on a 1% grade, reaching viaduct level at Jarvis St., east of which the viaduct to be built practically in accordance with the 1913 agreement. Subways to be provided at Church, Jarvis, Frederick, Princess, Parliament, Trinity and Cherry Streets. The subways on all streets to be of concrete, 14 ft. in the clear, and include two 24 ft. roadways and two 8 ft. sidewalks. The present tracks along the Esplanade to be used as industrial tracks, with switching confined to between 10 p.m. and 6 a.m. The subway on Trinity St., in addition to crossing under the elevated main lines, to cross under a ramped service track leading down to the present tracks, which would remain as industrial tracks, as mentioned above, the subway for this crossing to be 30 ft. wide and 10 ft. clear height. The 6 main tracks on the viaduct to continue along the reclaimed land, south of the present tracks, and the fill to be widened to take a high level yard between Cherry St. and the Don. The C.P.R. tracks to leave the main viaduct at the west bank of the Don River, and be handled as in the original 1913 agreement, as described above, a new bridge to be provided at Eastern Ave. and the present Queen St. bridge to remain; the Canadian National tracks, crossing the Don on a new bridge, to be handled to Logan Ave., as described above. All the bridges at Yonge St., and west of it, to be of structural steel, faced with concrete, and the Eastern Ave. bridge to be a steel structure without the concrete facing. The bridge over the Don River, to be located south of the present bridge, would accommodate 7 tracks, in the nature of an extension of the yard proposed to be located between Cherry St. and the river.

The railways propose, in the event of their plan being accepted by the city, to have the Bay St. and Yonge St. bridges built in 1924, and the new union station placed in operation, in addition to acquiring the necessary land south of the existing tracks, east of Yonge St. In 1925 they would complete the York St. and Spadina Ave. bridges and the overhead bridge at Eastern Ave., and, provided the harbor commissioners get the land in shape to receive them, would complete

construction tracks south of the proposed viaduct fill, between Yonge and Trinity Streets. Other work would be done subsequently. To place the new station in operation, some raising of the present tracks between Yonge and York Streets would be necessary, the tracks to lead from the station to both east and west on a 4/10 grade. This would, of course, be done in 1924, prior to opening the station for traffic. The plans also contemplate the provision of a temporary grade east from the Don River to Logan Ave., which would be built in 1924.

In presenting the plans, the railways' officers informed the city authorities that if they were adopted, a large saving in time as well as in cost would be effected, as with the 1913 plan it would take three years to get the new station into operation, while with the new plan it would

take only 10 months. The railway estimates are that to carry out the 1913 plans would cost \$32,000,000, while the new plans would cost \$20,476,000. The city's share under the 1913 plan would be \$8,846,404, and under the new plan only \$4,213,683. If the 1913 agreement were carried out, the city would have to pay the cost of elevating the C.P.R. locomotive house and adjacent facilities, and a large yard, which expense it would escape by adopting the new plan. Mr. Beatty reminded the city authorities that, unlike the Canadian National Rys., his company has not the entire resources of the country behind it.

Both railway presidents are reported to have stated that if the city should decide that it did not want to accept the modified plans, they were willing to carry out the 1913 agreement. Sir Henry

Thornton stated that he would have to go to Parliament to get the money to proceed with whichever plan was finally adopted. Both presidents and Mr. McLeod pointed out the modified plan's advantages, as regards economy, efficiency, and saving in time.

After the conference, Mr. Beatty and Sir Henry Thornton were entertained at luncheon by the Board of Trade's council, and addressed the Board's members in its assembly room.

On Nov. 23, Mr. McLeod presented the more detailed plans, as promised, to the city Board of Control, which referred them to the Works Commissioner and the Harbor Commissioners. The proposal will be thoroughly discussed and studied by the city authorities before the railways are given an answer.

Railway Wages and Working Conditions in Canada and the United States.

Canadian Railway Shopmen.—Details of the vote taken by Canadian railway shopmen, members of the American Federation of Labor's Railway Employees' Department, Division 4, to determine whether the majority wished to immediately make application for a board of conciliation and investigation to settle their wage dispute with the railways, or to resume negotiations with the railways, were given in Canadian Railway and Marine World for November, pg. 539, and it was there stated that the majority voted for the continuance of negotiations. After consultation between the Railway Association of Canada's operating committee's wage sub-committee, and the shopmen's leaders, formal negotiations were resumed in Montreal on Nov. 21. The railways were represented by George Hodge, Assistant General Manager, Eastern Lines; J. Burns, Works Manager, Angus shops, and R. A. Pyne, Superintendent of Motive Power, Western Lines, C.P.R.; A. E. Crilly, Chief of Wage Bureau; C. E. Brooks, Chief of Motive Power, and J. C. Garden, General Superintendent of Motive Power, Central Region, Canadian National Rys. The employees were represented by R. J. Tallon, President, American Federation of Labor's Railway Employees' Department, Division 4; Frank McKenna, Vice President; and Chas. Dickie, Secretary. At the time of writing (Nov. 22), the negotiations are still in progress. Prior developments in this matter, which was first brought up last spring, when the shopmen applied for a wage increase of 10c an hour, have been dealt with in preceding issues of Canadian Railway and Marine World.

Railway Maintenance of Way Employees.—As stated in Canadian Railway and Marine World for November, the board of conciliation and investigation in the maintenance of way employees' case, consisting of E. McG. Quirk, chairman; R. T. Riley, Winnipeg, for the railways, and David Campbell, Winnipeg, for the employees, unanimously recommended a 2c an hour increase. The board's report, received since, is summarized as follows: "It is recommended: 1. That, as requested by the employees, sec. 1 of the maintenance men's wage agreement read as follows: 'By maintenance of way employees is meant employees working in the track and bridge and building departments, for whom rates of pay are provided in this schedule, who have been in the service previously for one month in the preceding 24 months. Laborers in extra gangs,

unless those practically engaged all the year round, shall not be considered as coming under this schedule. 2. That section 22 be amended to conform with sec. 1 by changing the probationary period to read one month instead of six months. 3. That sec. 22, sub-sec. G., be amended by striking out the words 'on which they are employed,' and substituting the words 'or elsewhere,' in lieu thereof. 4. That wherever in wage agreement no. 7 maintenance of way employees are now receiving less than 40c an hour, an increase of 2c an hour be granted."

The employees' representatives expressed willingness to abide by this award, but the railway managements refused to grant the increase recommended, and issued the following statement: "The board's recommendation to increase by 2c an hour rates of pay for employees receiving less than 40c an hour cannot be accepted until some means have been found to secure the increased revenue required to meet the additional expenditures which the adoption of the recommendation would involve. This decision has been reached notwithstanding that the board, constituted as it was, has unanimously recommended, in effect at least, that in view of the substantial increases in rates of pay and improvements in working conditions that the employees have received in recent years, employees now receiving rates of pay of 40c an hour or over should not, under existing conditions, receive any further increase. It was definitely shown in evidence submitted to the board, which was not questioned, that rates of pay in recent years had increased materially beyond any increase in the cost of living, and that there has not been any change in the cost of living since the rates of pay for maintenance of way employees were last revised, to justify any further revision upwards at the present time."

C.P.R. Telegraphers.—The board of conciliation and investigation, consisting of Lt.-Col. O. M. Biggar, Ottawa, chairman; J. B. Coyne, Winnipeg, for the company, and David Campbell, Winnipeg, for the employees, appointed to settle the dispute between the C.P.R. and its station agents, assistant agents, telegraph operators, train dispatchers, traffic supervisors and linemen, members of the Order of Railway Telegraphers, held sittings in Montreal on Oct. 18, 19 and 20. The company was represented by Geo. Hodge, Assistant General Manager, Eastern Lines, C.P.R., and A. E. Stevens, General Superintendent, Manitoba District, and the employees were represented by Sena-

tor G. D. Robertson and numerous brotherhood officers. The board discovered that when the request for its formation was made by the employees, the differences between the company and the employees were connected with a wage increase application and a desire to have several rules changed, but that prior to opening hearings, all but one of the proposed changes in the rules had been disposed of satisfactorily by direct negotiation, leaving for the board to settle only the matter of a general wage increase and the employees' request that there be added to the yearly remuneration of traffic supervisors, train dispatchers and certain assistant agents an amount equal to 7 days' pay. The board's majority report, signed by Messrs. Biggar and Coyne, held that neither this latter request nor that for a general wage increase were justified, and a minority report signed by Mr. Campbell favored increase in specified cases. The Dominion Labor Department received a letter from A. E. Chapman, General Chairman, C.P.R. System, Order of Railroad Telegraphers, on Nov. 5, stating that neither award would be acceptable to the employees. Press reports state that a vote is being taken among the men affected to determine whether they want further action taken to obtain the increase sought.

C.P.R. clerical employees, members of the International Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, served 30 days' notice on the management on Oct. 22 that they desired a reopening of negotiations on their wage schedule. Wage increases are sought which would have the effect of restoring wages to the 1920 level, and specifically the employees demand return to overtime rates existing in 1920, which would mean time and a half after 8 hours, instead of after 9 hours as at present; and restoration of overtime rates for work on Sundays and legal holidays. About 4,000 men employed on C.P.R. Eastern Lines are affected.

Train Service Brotherhoods' Wage Demands.—Details of the decisions to ask for increased wages, arrived at by officers of the Big Four brotherhoods in the U.S., have been given in preceding issues of Canadian Railway and Marine World. It is reported that employees on Canadian lines have acquainted Canadian railway officials with their intention to try to get corresponding increases when schedules come up for discussion in the near future, and that the managements,

in acknowledging receipt of this information, have indicated that they will bring forward for consideration certain changes in schedule rules which they consider advisable, and have also indicated that they think the present time inopportune to ask for higher wages.

Shop Staff Reductions.—C.P.R. shops throughout western Canada were closed during the last three days of October, which resulted in vigorous protest from the shopmen's leaders, who alleged that the action was a violation of the agreement providing for a working week of 40 hours. Two hundred men were laid off at the Canadian National Rys. Transcona shops during the last week in October, in conformity with the policy of putting into effect a cut of about 10% in the staff at all shops, and the Great War Veterans Association, provincial command, communicated with Sir Henry Thornton, President, Canadian National, asking that they be reinstated. He replied that while he appreciated the spirit in which the request was made, the C.N.R. must be operated with business intelligence and with due regard for earnings, and that therefore the request had to be refused.

Sir Henry Thornton, President, Canadian National Rys., in addressing the Toronto Board of Trade on Nov. 16, said: "As far as the Canadian National is concerned, we cannot go on indefinitely increasing wages and decreasing rates, if we are to maintain any sort of efficiency or solvency. I would be the last one to advocate anything other than a living wage for those who work upon the railways, but I want to make it quite clear—and in saying this I am violating no principles of economics, and I manifest no lack of sympathy to the working class—we cannot go on increasing wages if we are going to eliminate our deficit. Likewise, until we reach a more settled financial condition, we cannot endorse any wholesale reduction in rates and fares. If anyone can show me how 2 and 2 make 6, I will be much obliged to him. It can't be done, and unless within a reasonably short time the burden which the C.N.R. system imposes in the form of deficits on the taxpayer is not reduced we are all going to be in a very bad way. This is what I am fighting for and this is what I am trying to achieve."

U.S. Situation.—As stated in Canadian Railway and Marine World for November, the U.S. Railroad Labor Board, in a decision effective Oct. 16, granted small wage increases to members of the International Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees on some 30 railways, as follows: Storekeepers, assistant storekeepers, chief clerks, foremen, and other clerical supervisory employees, 2c an hour; clerks with over one year's experience, 2c an hour; clerks with less than one year's experience, 1c an hour (clerks without experience on entering the service to be paid \$2.35 a day for first 6 months and \$2.75 a day for second 6 months); callers, assistant station masters, train announcers, gate-men, baggage and parcel room employees, 2c an hour; janitors and watchmen, 1c an hour; common laborers in stations and warehouses, 2c an hour; freight handlers, 1c an hour; sealers, scalers and fruit inspectors to be paid 1c an hour over truckers' rates, and stowers and coopers 2c an hour over truckers' rates.

The Brotherhood of Railroad Signalmen, which, as stated in our November issue, had been refused a wage increase by the Labor Board, has asked the Board to withdraw its decision and remand the

dispute to the individual railways interested for settlement locally. It does not seem reasonable to suppose that the Board will accede to this request, as it would appear to be establishing a dangerous precedent, and to be robbing the Board's decisions of any finality.

Train service employees on U.S. railways have not met with any great degree of encouragement in their effort to get higher wages. Practically all carriers asked for wages increases have refused to grant them, but on the contrary have suggested elimination of several rules favorable to the employees. The outlook

is that the negotiations between U.S. railways and their train service employees on wage contracts which expire on Dec. 1 will result in disagreement, and that the matter will go before the Labor Board.

A Philadelphia press report states that system federation no. 90, representing shopmen on the Pennsylvania System, has brought suit in the Federal District court against the Pennsylvania Rd. for \$15,000,000, alleged due to make up underpayments which resulted from the Pennsylvania's refusal to abide by the U.S. Railroad Labor Board's rules.

Self Propelled Cars on Steam Railways.

The Canadian National Rys. management has ordered 6 storage battery cars from International Equipment Co., Montreal, Canadian agents for Edison Storage Battery Co., and the Railway Storage Battery Car Co. They will be built at the Canadian Car & Foundry Co.'s Montreal plant, and are expected to be delivered in 6 months. They will resemble very closely car no. 15,801, now in service between Toronto and Beaverton, which was described and illustrated in preceding issues of Canadian Railway and Marine World. Equipment will consist of 4 G.E. 261-A. motors and 250 A-12-H Edison storage batteries.

The storage battery car reported in our November issue as being built at the Niagara, St. Catharines & Toronto Ry. shops in St. Catharines, Ont., for the Canadian National Rys., and of the frame of which an illustration was given, has been completed, and will be put on exhibition at St. Catharines in connection with an exhibit of home products which will be held there shortly, before going into operation.

The large gasoline motor car ordered by the G.T.R. from the National Steel Car Corporation, Hamilton, before the consolidation, has been completed, and the expectation at the time of writing (Nov. 22) is that it will be tested between Wyoming and Petrolia, 5.74 miles, on the Petrolia Subdivision, London Division, Southwestern Ontario District, Central Region, in the near future, and go into operation there. This car was described and plan and elevation given in Canadian Railway and Marine World for February, pg. 49. A London paper, in speaking of the proposed introduction of self propelled cars on the London Division, referred recently to the steam car which the Canadian National Rys. once had in operation, which, it said, "was run by steam power, developed under gasoline and kerosene pressure." (Sic.)

The Pacific Great Eastern Ry., as stated in Canadian Railway and Marine World for November, is having a gasoline car built for operation between Williams Lake, 277.8 miles from Squamish dock, and Quesnel, 70.7 miles. The engine and trucks will be supplied by the Four-Wheel Drive Auto Co., Kitchener, Ont., and the body is being built to the order of the Westminster Iron Works, New Westminster, B.C. The car will, in addition to providing passenger service, be used for switching freight cars, and occasionally for hauling one freight car on the main line. The chassis complete will weigh 11,000 lb., and the car will be 25 ft. 5½ in. over couplers; the body will be 22 ft. 2 in. over all, and 8 ft. 10 in. wide outside; width of frame will be 36 in. and wheelbase 15 ft. 5 in. The car will be equipped with a Wiscon-

sin 62 h.p. motor, 4 cycle, 6 cylinder, with the following chief characteristics: bore, 5.1 in.; stroke, 5.5 in.; piston displacement, 672 cu. in.; no. of crankshaft bearings, 4; diam., 2¾ in.; length of connecting rods, 12 in.; lubrication, forced feed; cooling system, centrifugal pump; radiator, tubular, 3 point suspension. There will be an Eisemann high tension magneto with impulse starter, Stromberg carburetor, a 50 gall. gasoline tank mounted at side of chassis, with Stewart vacuum feed, and Hele Shaw multiple disc clutch with clutch brake. The transmission will be of the jaw clutch type, the gears always being in mesh. Four speeds forward and 4 reverse will be provided. The reverse gear mechanism will be mounted in the sub-transmission, and will contain a differential, permitting the power to be transmitted in either forward or reverse motion. This mechanism will be controlled by a hand lever located near the driver, similar to the reverse lever on a locomotive, and will permit the use of all 4 speeds in either direction. The mechanism will be mounted on ball bearings throughout, will be housed in an oil-tight, dust-proof case, and will run in an oil bath. Power will be transmitted from the reverse gear differential to the axles, through propeller shafts, each containing universal joints, these to have hardened steel bushings running upon hardened steel pins. Both front and rear axles will be rigid, like the rear axle of a truck, and will be of the full floating type. Each axle will contain a differential, through which the power will be transmitted to each driving wheel. The axle differentials will be completely housed in oil-tight, dust-proof casings, and these casings, and not the driving axles, will take the weight of the car. The car will be equipped with a pilot at the front end, an air brake system, with brake shoes applying on all wheels, a 10 cu. ft. per min. compressor controlled by automatic governor, 2-unit starting and lighting system, exhaust gas heating system and locomotive type warning bell. The wheels will be steel tired, 35 in. diam.

Mechanical Convention at Atlantic City.—The American Railway Association's Mechanical Division, general committee, decided at a meeting in New York on Nov. 8, to hold a convention with exhibits at Atlantic City, N.J., on June 11, 1924. The Railway Supply Manufacturers' Association also voted in New York on the same day to hold exhibits on the same dates.

Canadian Railway Club.—C. W. Parker, Signal Engineer, C.P.R., read a paper on Railway Signalling, which was illustrated by stereotypical views and blackboard sketches, at the Club's monthly meeting, Nov. 13.

Railway Rolling Stock Orders and Deliveries.

Canadian Locomotive Co. has delivered 7 more mikado locomotives to Canadian National Rys.

The C.P.R. has ordered 15 steel frames for colonist cars, from National Steel Car Corporation.

The C.P.R. is having 2 steel snow ploughs built at its Angus shops, Montreal, in addition to the 4 delivered recently.

Toronto, Hamilton & Buffalo Ry. has ordered 10 first class passenger cars, 6 smoking cars and 6 baggage cars from Canadian Car & Foundry Co.

Canadian Locomotive Co. has delivered 5 transfer locomotives to Canadian National Rys., and 3 mikado locomotives to Timiskaming & Northern Ontario Ry.

The Timiskaming & Northern Ontario Ry. has ordered one more mikado locomotive from Canadian Locomotive Co., to be built to the same specifications as the 4 ordered from the same company in 1921, and the 3 ordered in Oct., 1923, which have already been delivered.

Canadian Car & Foundry Co. has made the following deliveries:—6 steel frames for parlor cafe cars, 12 all steel mail cars and 300 75-ton coal cars, to Canadian Pacific; 30 all steel sleeping cars, 500 60-ton box cars and 12 75-ton depressed center flat cars, to Canadian National.

Montreal Locomotive Works has delivered 15 mikado locomotives, 2-8-2, with cylinders 25½ x 32 in., to Canadian Pacific Ry.; 11 mikado locomotives, 2-8-2, with cylinders 27 x 30 in., to Canadian National Rys.; and 5 4-wheel switching locomotives, 0-4-0T, with cylinders 30 x 20 in., to Quebec Development Co.

Canadian National Rys. received the following rolling stock during October: 6 mikado locomotives, and 1 transfer locomotive, from Canadian Locomotive Co.; 15 sleeping cars, 326 60-ton box cars, and 180 stock cars, from Canadian Car & Foundry Co.; 14 box cars, and 38 general service cars, from Eastern Car Co.; 398 automobile cars, and 56 60-ton box cars, from National Steel Car Corporation.

The C.P.R. received the following rolling stock between Oct. 12 and Nov. 11:—16 mikado locomotives, from Montreal Locomotive Works; 4 steel snow ploughs, 14 oil tanks, 10,000 gall. capacity, and 430 36 ft. steel underframe box cars, built at its Angus shops, Montreal; 4 cafe parlor cars, frames built by Canadian Car & Foundry Co. and cars completed at Angus shops; 177 40-ton flat cars from Eastern Car Co.

U.S. locomotive builders' operations are reported as follows:—Locomotives shipped from plants in Oct. 1923, 310, compared with 335 in Sept. 1923 and 145 in Oct. 1922. In the first 10 months of 1923, 2,561 locomotives were shipped, compared with 905 in the first 10 months of 1922. Unfilled orders on hand at the end of Oct. 1923 were 977, compared with 1,178 at the end of Sept. 1923, and 1,538 at the end of Oct. 1922.

Eastern Car Co., New Glasgow, N.S., is building 10 cars for the British Empire Steel Corporation, of which it is a subsidiary, to transport workmen to and from the B.E.S.C. coal mines. They will be of similar design to a box car, 65 ft. long, but will have side windows, and end platforms, and will be equipped with steam heating. Longitudinal seats will be installed, and the seating capacity of each car will be about 90.

Eastern Car Co., New Glasgow, N.S., is going to build 100 50-ton coal cars for the British Empire Steel Corporation, of which it is a subsidiary. They will be all steel, and of the same type as those built last spring, which had the following dimensions: length inside, 30 ft. 0¼ in.; width inside, 9½ ft.; height from rail to top of frame, 10 ft.; marked capacity, 100,000 lb.; maximum capacity, 120,000 lb. They will conform closely to A.R.A. standards, will be of the self clearing type, with 4 dump doors, operated in pairs, and will have A.R.A. arch-bar trucks, 5½ x 10 in. journals, 33 in. 750 lb. cast iron wheels, and Cardwell G-11-A draft gear.

Canadian Bridge Co. has ordered a 4-wheel switching locomotive, 0-4-0, from Montreal Locomotive Works. The general dimensions, etc., will be as follows:

Gauge	4 ft. 8½ in.
Weight on drivers	99,800 lb.
Total engine	99,800 lb.
Wheel base, driving	7 ft.
Total engine	7 ft.
Cylinders	16 x 24 in.
Driving wheels	42 in.
Main journals	8½ x 9 in.
Others	8½ x 9 in.
Boiler, type	Radial stay, straight top
pressure	180 lb.
Firebox, length	52 3/16 in.
width	55½ in.
Grate area	20.2 sq. ft.
Tubes	156—2 in.
length	11 ft. 8 in.
heating surface	946 sq. ft.
Firebox, heating surface	69 sq. ft.
Total heating surface	1,015 sq. ft.
Tractive power	22,400 lb.
Factor of adhesion	4.46
Saddle tank	2,000 gall.
Coal	2,700 lb.

The Eastern Car Co., New Glasgow, N.S., has begun construction of 8 all-steel wing snow ploughs, with air operated wing, and nose attachment, for Canadian National Rys., the first of which, it is expected, will be delivered early in December. They will be of practically the same design as those built previously for the C.N.R., except that the wings will be wider, and the contour will be changed so that the snow will be thrown further to the side than previously. The wing-in cylinders will be increased in diameter to 16 in., for quicker action of the wing-in. The nose angle will be increased, so as to throw the snow off the front of the plough and prevent its accumulation. The searchlight, which in previous designs was located outside the cupola, will be built into the wall, so that globes can be put in from the inside, thus obviating the necessity of men going out on the roof. The nose operation, handled previously by one double-acting cylinder, will be taken care of by one cylinder, in which the piston thrust will be downward, and another in which it will be upward, these cylinders being arranged to work in conjunction with each other.

Cathels & Sorenson, Victoria, B.C., have ordered a prairie type locomotive, 2-6-2, from Montreal Locomotive Works. The general dimensions, etc., will be as follows:—

Gauge	4 ft. 8½ in.
Weight on drivers	96,000 lb.
engine truck	13,000 lb.
trailing truck	16,000 lb.
Total weight	125,000 lb.
Tender weight	84,000 lb.
Wheel base, driving	9 ft.
Total, engine	24 ft.
Total, engine and tender	46½ ft.
Cylinders	17 x 24 in.
Driving wheel	44 in.
Engine truck wheels	28 in.
Trailing truck wheels	28 in.
Tender truck wheels	33 in.
Main journals	7½ x 9 in.
Others	7½ x 9 in.

Engine truck journals	5 x 10 in.
Trailing truck journals	5 x 10 in.
Boiler, type	Radial stay, extended wagon top
Boiler pressure	180 lb.
Firebox length	84½ in.
width	40½ in.
Grate area	23.5 sq. ft.
Tubes	235—2 in.
Length over tubes	10 ft. 5 in.
Heating surface, tubes	1,282 sq. ft.
firebox	128 sq. ft.
Total heating surface	1,410 sq. ft.
Tractive power	24,000 lb.
Factor of adhesion	4.0
Tender frame	Steel channels
Tank capacity	4,000 gall.
Fuel	4 cords wood

The Timiskaming & Northern Ontario Ry. 3 locomotives, ordered from Canadian Locomotive Co., as stated in Canadian Railway and Marine World for October, will have the following general dimensions, etc.:—

Type	2-8-2 mikado, with booster
Gauge	4 ft. 8½ in.
Type of cab	Vestibule
Fuel	Soft coal
Service	Freight
Limiting height	15 ft. 4½ in.
width	10 ft. 9 in.
Weight in working order on drivers	195,690 lb.
engine	24,750 lb.
trailing truck	49,160 lb.
total engine and tender	269,600 lb.
Wheelbase, rigid	16 ft. 6 in.
engine	34 ft. 8 in.
engine and tender	62 ft. 5½ in.
Diameter of driving wheels	63 in.
Material of driving wheel centers	Cast steel
Leading truck wheels	33 in.
Trailing truck wheels	45 in.
Diam. and length of main driving journals	10 x 13 in.
Diam. and length of other driving journals	9 x 13 in.
Diam. and length of engine truck journals	6½ x 12 in.
Diam. and length of trailing truck journals	8 x 14 in.
Boiler, type	Radial stay
Boiler, outside diam. first ring	71 in.
Boiler, working pressure	180 lb.
Tubes, number and diameter	160—2½ in.
Flues, number and diameter	32—5½ in.
Length of tubes	20 ft.
Combustion chamber, length	None
Heating surface, firebox and arch tubes	221.5 sq. ft.
Heating surface, tubes and flues	2,806.5 sq. ft.
Heating surface, total	3,028 sq. ft.
Superheating surface	747 sq. ft.
Firebox length and width	96 x 75½ in.
Grate area	60 sq. ft.
Valves, type	Piston
Valve travel	8½ in.
Valves, diam.	14 in.
lap and lead	Lap 1½ in., lead ¼ in.
Cylinders, stroke	30 in.
diam.	25 in.
Tractive effort	54,700 lb. with booster
Factor of adhesion	5.35
Weight per cylinder horsepower	133 lb.
Weight per boiler horsepower	154 lb.
Boiler h.p. in % cylinder h.p.	86.3
Booster	Franklin Ry. Supply Co.
Valve gear	Young
Superheater	Superheater Co., type A
Reverse gear	Ragonnet
Injectors	Ontario
Feedwater heater	Elesco
Headlight equipment	Pyle-National electric
Engine truck	Franklin Economy
Trailing truck	Commonwealth Steel Co. Delta
Safety valves	Coale
Air brakes	Westinghouse E.T. 6
Frames, material	Vanadium cast steel
Firedoor	Franklin butterfly
Driving box wedges	Franklin adjustable
Grate shakers	Franklin, power
Driving boxes	Cast steel
Oilers	Franklin, grease lubricators
Sanders	Wilson, type A
Steam heat reducing valve	Gold
Packing	Lewis & Kunzer, metallic
Radial buffer	Franklin
Steam heat connections	Barco
Air bell ringer	Viloco
Blow off cocks	Duplex
Weight of tender in working order	151,750 lb.
Capacity of tank	6,500 imp. gall.
Style of tank	Water bottom
Coal capacity	12 tons
Trucks, type	4-wheel, equalized
Tender frame	Commonwealth cast steel
wheels, type	Solid rolled steel
diam.	36 in.
Journals, diam. and length	5½ x 10 in.

Mainly About Railway People Throughout Canada.

Miss Marjory Annable, daughter of W. G. Annable, Assistant Steamship Passenger Manager, C.P.R., Montreal, was among the debutantes at a dance at the Ritz Carlton Hotel there recently.

F. H. Anson, President, Abitibi Power & Paper Co., which owns the Abitibi Transportation & Navigation Co., died in Montreal General Hospital, Nov. 1, following an operation.

George D. Baxter, for many years G.T.R. station agent at St. Catharines, Ont., died there Nov. 16.

E. W. Beatty, K.C., President, C.P.R., will preside at a dinner to St. John, N.B., business men on board the C.P.R. s.s. Montclair there, Dec. 5.

C. A. Biggar, Assistant Superintendent of the Geodetic Survey of Canada, died suddenly at his home in Ottawa, Nov. 2, aged 72.

H. H. Brewer, Assistant General Manager, Western Region, lines east of Jasper, Alta., Canadian National Rys., Winnipeg, who, as stated in Canadian Railway and Marine World, was granted leave of absence on Oct. 5, for a few months, owing to illness, is in one of the southwestern states.

A. Brostedt, General Traffic Agent, Canadian National Rys., Hong Kong, China, has arrived in Montreal to attend a general conference of C.N.R. officials.

Sir George McLaren Brown, European General Manager, C.P.R., entertained at dinner at the Hotel Metropole, London, Eng., recently, a number of merchants from Denmark, Sweden and Finland, who were proceeding by the C.P.R. to Montreal, thence via Chicago to Mexico, to promote trade relations.

Arthur Bernard Buckworth, who has resigned from the position of Deputy Minister of Railways for British Columbia, Victoria, was born at Birmingham, Eng., Mar. 2, 1876, entered transportation service in 1896, and was, to 1897, engaged in loading freight cars for C.P.R. at Vancouver, B.C.; 1898 to 1906, ticket agent, C.P.R., and land agent, Great Northern Ry., Ymir, B.C.; 1906 to 1912, timber contracting for railways; 1912 to 1918, representative at Vancouver, for E. R. C. Clarkson & Sons, Toronto, trustees and liquidators; 1918 to Aug. 1, 1920, Manager, under E. R. C. Clarkson & Sons, Spokane & British Columbia Ry., Vancouver; Aug. 1, 1920, to Jan., 1923, General Manager, Pacific Great Eastern Ry., Vancouver, B.C.; Jan., 1923, to Nov. 30, 1923, Deputy Minister of Railways for British Columbia. In announcing the resignation, the B.C. Minister of Railways said: "Mr. Buckworth's administrative service, first as General Manager, Pacific Great Eastern Ry., and since January, as Deputy Minister of Railways, have been highly satisfactory, and his resignation is accepted with regret. While acting as Manager of the Government railway, he had many difficulties to contend with, but his untiring energy and persistency placed the railway in a much improved condition both physically and financially. For the past year, in addition to his regular duties, he has been engaged in investigating the resources, etc., of the district tributary to the railway." Mr. MacLean also stated that there will not be any new appointment made in the near future, owing to the temporary cessation of construction work, the present staff being able to carry on the Department's work.

M. J. Butler, C.M.G., formerly Deputy

Minister of Railways, addressed the Knights of Columbus at luncheon in Toronto recently, on transportation.

J. R. Cameron, Assistant General Manager, lines west of Jasper, Alta., Western Region, Canadian National Rys., was mentioned in Canadian Railway and Marine World for November as having been transferred from Vancouver to Winnipeg to discharge the duties of H. H. Brewer, Assistant General Manager, lines east of Jasper, Western Region, during the latter's absence on account of ill-health. We are officially advised

kaming & Northern Ontario Ry., addressed the Engineering Institute of Canada's Toronto branch on Nov. 29, on recent developments on that line.

D. C. Coleman, Vice President, C.P.R. Western Lines, and Mrs. Coleman returned to Winnipeg, Nov. 18, from a trip to Montreal and eastern U.S. points, during which Mr. Coleman addressed the New England Railroad Club at Boston, Mass., on "A railway contribution to the development of a nation."

J. E. Dalrymple, Vice President, Traffic Department, Canadian National Rail-

Hon. G. P. Graham, Minister of Railways and Canals, at Ye Olde Cheshire Cheese, in London, during the Imperial Conference.
—Reproduced from Toronto Evening Telegram.

that our information as to Mr. Cameron discharging Mr. Brewer's duties was erroneous, as Mr. Campbell's visit to Winnipeg was in connection with routine matters, including the question of the preparation of the 1924 budget for his territory, and he also attended the meeting of Western Region officials there Oct. 31, leaving that night to return to Vancouver.

R. G. Chamberlain, Chief of Investigation Department, C.P.R., went from Toronto to Montreal, Nov. 17, in one of the Laurentide Air Service's aeroplanes.

S. B. Clement, Chief Engineer, Timis-

ways, wrote an article on the remarkable progress made by Canada's commerce and industry in 20 years, which was published recently in the Journal of Commerce and Commercial Bulletin, New York.

G. A. Dodge, who has retired from active service, was presented with an address and a gold-headed cane by his associates in the Canadian National Rys. Purchasing Department at Moncton, N.B., recently. L. Price, chief clerk, read the address, the presentation being made by F. H. Kinnear, Purchasing Agent.

C. F. Furse has been appointed Man-

ager of the Tourist Association for Quebec Province, and is reported to be preparing plans for a campaign for securing tourists.

F. G. Gemmall, of the Canadian National Rys. Publicity Department, London, Eng., sailed from Montreal on the White Star s.s. Doric, Nov. 10, for Liverpool.

J. E. Gibault, Division Engineer, Canadian National Rys., Quebec, addressed the Rotary Club there recently on railway maintenance of way.

J. Murray Gibbon, General Publicity Agent, C.P.R., addressed the Empire Club of Canada at Toronto, on Nov. 22, on Canadian letters and the new Canadian.

P. A. Goguen, Apprentice Instructor, Canadian National Rys.' shops, Moncton, N.B., was given an address and a reading lamp by the apprentices recently as wedding gifts.

Hon. G. P. Graham, Minister of Railways and Canals, who had been attending the League of Nations meeting at Geneva, and the Imperial Conferences in London, has returned to Ottawa, having arrived at New York, Nov. 23, on the s.s. Berengaria. He will be entertained at dinner in Toronto on Dec. 12 by Ontario Liberals.

Mrs. de la Hooke, wife of Edward de la Hooke, formerly City Passenger Agent, G.T.R., London, Ont., and latterly steamship agent, who has been Secretary-Treasurer of the Canadian Ticket Agents' Association since its formation 37 years ago, died suddenly at their home in London, on Oct. 30, while at dinner, owing to a heart attack. Among the transportation officials who attended the funeral on Nov. 1, All Saints Day, were several from Toronto, including W. Fulton, District Passenger Agent, C.P.R.; C. E. Horning, District Passenger Agent, Canadian National Rys.; G. W. Vaux, General Agent, Union Pacific System; and J. J. Rose and J. J. Brignall, of the Robert Reford Company. W. Jackson, C.P.R. ticket agent, Clinton, Ont., represented the Canadian Ticket Agents' Association, of which he is one of the oldest members, and one of the executive committee. One of the hymns sung at the funeral service was "On the Resurrection Morning," which was written in 1864 by the Rev. S. Baring-Gould, who, in 1855, went as an assistant master to St. John's College, Hurstpierpoint, Sussex, England, which Mr. de la Hooke attended from 1850 to 1858, and who attained his 90th birthday recently.

W. H. Hunt, who is now Resident Engineer of the harbor and railway work at Secondee, Gold Coast Colony, was at one time Assistant Engineer on the Grand Trunk Pacific Ry., at Edmonton, Alta.

Geo. R. Huntington, President, Minneapolis, St. Paul & Sault Ste. Marie Ry., the Duluth, South Shore & Atlantic Ry., and the Mineral Range Ry. (C.P.R. subsidiaries), died at Minneapolis, Minn., Nov. 3, from heart disease. He was born at New Lisbon, Wis., Sept. 10, 1868, and entered railway service in 1882, as office boy, Chicago, Milwaukee & St. Paul Rd., being subsequently appointed successively operator, agent and train dispatcher, which latter position he held from 1884 to 1888, since when his record has been:—1888 to June 25, 1899, train dispatcher and Chief Train Dispatcher, Minneapolis, St. Paul & Sault Ste. Marie Ry.; June 25, 1899, to Oct. 31, 1900, Superintendent, same road; Nov. 1, 1900, to July 1, 1909, General Superintendent, same road; July, 1909, to period of federal control, General Manager, same

road; during federal control, Federal Manager, same road, Duluth, South Shore & Atlantic Ry., Mineral Range Rd., Copper Range Rd., and Lake Superior Terminal & Transfer Ry.; March 1 to March 10, 1920, General Manager, Minneapolis, St. Paul & Sault Ste. Marie Ry., Duluth, South Shore & Atlantic Ry., and Mineral Range Rd.; March 10, 1920, to May 16, 1922, Vice President and General Manager, Minneapolis, St. Paul & Sault Ste. Marie Ry. (including Wisconsin Central Ry.), and Duluth, South Shore & Atlantic Ry., and Mineral Range Rd.; May 16 to the date of his death, President, Minneapolis, St. Paul & Sault Ste. Marie Ry.

C. T. Jaffray, who has been elected President, Minneapolis, St. Paul & Sault Ste. Marie Ry., a C.P.R. subsidiary, was born in Galt, Ont., about 55 years ago, and after being educated at the Galt and Kitchener high schools, entered the Merchant Bank of Canada's service at Toronto, remaining for 5 or 6 years, and then going to Chicago, where he continued in banking service, afterwards go-

Frederick Ernest Whelpley,
Who has been appointed Treasurer, Atlantic
Region, Canadian National Railways,
Moncton, N.B.

ing to Minneapolis and entering the service of the Northwestern National Bank, which later became the Second National Bank, and then the First and Security National, and finally the First National Bank of Minneapolis, of which he is now President. He has been a director of the M., St. P. & S. S. M. Ry. for some time, and for 10 years prior was a director of the Wisconsin Central Ry. He is a financier of outstanding position, thoroughly familiar with the affairs of the road he has been elected to preside over, and well acquainted with the commercial conditions of the western states served by the railway.

Mrs. Kelley, wife of Howard G. Kelley, formerly President, Grand Trunk Ry., who has been living in Boston, Mass., for some time, left there at the beginning of November for San Diego, Cal.

Hon. W. C. Kennedy, who, when he died on Jan. 17, was Minister of Railways

and Canals, was buried temporarily in St. Alphonsus Cemetery at Windsor, Ont. The bronze coffin containing the body was removed on Nov. 1 to a handsome mausoleum, which had been built there.

J. R. Kirkwood, of the Canadian National Rys. dispatchers' staff at London, Ont., was given a loving cup by members of the local railways' staffs recently, in recognition of excellent bowling.

W. Leon Lindsay, formerly Travelling Passenger Agent, C.P.R., St. John, N.B., died there Nov. 16, after a long illness.

A. E. Lock, Superintendent, Car Service, Toronto, Hamilton & Buffalo Ry., Hamilton, Ont., was elected Vice President, Eastern Association of Car Service Officers, at the autumn meeting in New York recently.

Capt. C. B. R. Macdonald, who is a graduate of the Royal Military College, Kingston, Ont., has been appointed Assistant Engineer, Chilean Trans Andine Ry., at Los Andes, Chile.

Neil R. Macdonald ("Foghorn"), who died in Montreal Nov. 20, aged 63, from pneumonia, was for many years well known in railway construction work in western Canada, particularly on the C.P.R. In later years he went in for mining in the Yukon and took part in the Great War.

Ewen MacKenzie, contractor, who died at Toronto recently, left an estate valued at \$23,884. He was a brother of Sir William Mackenzie.

Ewen Mackenzie, contractor, who died recently, and ex-President, Canadian Northern Ry., became seriously ill early in November, suffering from acute heart dilation, thought to have been brought on by over exertion at golf. At the time of writing (Nov. 28) he is still laid up at his house in Toronto, and while his recovery is confidently expected, it is thought that he will have to rest completely for some time. He is 74 years of age.

Sir Donald Mann, ex-Vice President, Canadian Northern Ry., sailed on the s.s. Montlaurier from Quebec, Nov. 3, for Liverpool.

Edward Maxwell, R.C.A., who died suddenly in Montreal Nov. 14, aged 56, was the architect for the enlargement of the Chateau Frontenac, Quebec, for the C.P.R., as well as for the erection of the company's hotels at Winnipeg, Calgary and Vancouver.

W. Neilson, who died in Elizabeth Tp., Ont., Nov. 15, aged 93, entered G.T.R. service in 1854, and after serving some years as conductor, was station agent successively at Kingston Jct., and at Lyn, Ont. He retired from active service about 30 years ago.

Hon. Frank Oliver, recently appointed a member of the Board of Railway Commissioners, has announced his retirement from the editorial and business direction of the Edmonton Bulletin, which he founded in 1882, and has directed continuously since. On Oct. 25, residents of Edmonton and vicinity gave him a reception on the spot overlooking the Saskatchewan River where he halted with his ox cart on arriving there in 1876.

R. P. Ormsby, Secretary, Canadian National Rys., sailed from Montreal on the White Star-Dominion s.s. Regina, Oct. 25, for England.

John O'Rourke, of the stores and mechanical accounting office, Atlantic Region, Canadian National Rys., Moncton, N.B., was given a club bag by the Auditor of Disbursements' office staff and an address and a dressing case by the

x Sir Wm. Mackenzie, President

stores and mechanical accounting office, on Nov. 17, on leaving the service to go to Buffalo, N.Y.

A. E. Parker, Managing Secretary, Winnipeg Board of Trade, addressed the Greenwood Methodist Church Young Men's Club at Winnipeg, on Nov. 1, on the railway builders of Canada.

Senator J. D. Reid, ex-Minister of Railways and Canals, and Mrs. Reid, left Prescott, Ont., Nov. 25, to sail from New York for a several months trip abroad.

J. K. L. Ross, one of the C.P.R. directors, and Mrs. Ross returned to Montreal, Nov. 12, from Laurel, Md., where they spent several weeks.

Frank Russell, Superintendent of Wharves and Traffic, Vancouver Harbor Commission, has charge of the Commission's terminal railway.

J. G. Rutherford, C.M.G., V.S., H.A.R. C.V.S., one of the members of the Board of Railway Commissioners, who died at Ottawa, July 24, left an estate valued at \$34,712.63.

P. W. St. George, consulting engineer, Montreal, died in Montreal, Nov. 12, aged 74. Born and educated in Scotland, he came to Canada in 1866, and entered railway service in the Nova Scotia Ry.'s engineering department, and subsequently was engaged on surveys for the Intercolonial Ry., becoming Assistant Engineer of Construction in 1870. Later on he was on survey work for the Northern Colonization Ry., now part of the C.P.R. From 1875 to 1883 he was in the Montreal City Council's service, to which he returned, after a few months' service as Divisional Engineer, Norfolk & Western Rd., remaining as City Surveyor until 1900, when he retired.

Lord Shaughnessy, Chairman of the Board, C.P.R., and Hon. Marguerite Shaughnessy, returned to Montreal, Oct. 29, from a short trip to Laurel, Md., where they visited J. K. L. Ross, another C.P.R. director, and Mrs. Ross.

Ernest W. Smith, who has been appointed General Superintendent, Sleeping, Dining and Parlor Cars and Restaurants, Canadian National Rys., Montreal, was born at Northbridge, Mass., April 21, 1869, and entered railway service March 1, 1892, since when he has been, to March 1, 1898, stenographer, G.T.R., Montreal; March 1, 1898, to March 1, 1902, city ticket agent, G.T.R., Sherbrooke, Que.; March 1, 1902, to May 1, 1908, inspector, Dining and Parlor Car Department, G.T.R., Montreal; May 1, 1908, to March 1, 1923, Superintendent, Dining and Parlor Car Department, G.T.R., Toronto; March 1, 1923, to Aug. 1, 1923, Superintendent, Sleeping, Dining and Parlor Cars and Restaurants, Canadian National Rys., Toronto; Aug. 1, 1923, to Nov. 1, 1923, acting General Superintendent, Sleeping, Dining and Parlor Cars and Restaurants, Canadian National Rys., Montreal.

C. V. Stephens, who is spoken of in press reports as Traffic Controller, Great Indian Peninsula Ry., but whose name is not in the official list in Canadian Railway and Marine World's library, has been visiting Canada and the United States to study railway practice.

A. E. Stevens, General Superintendent, Manitoba District, C.P.R., returned to Winnipeg early in November, after spending some three weeks in Montreal in connection with the board of conciliation and investigation on the dispute between the C.P.R. and certain of its employees who are members of the Order of Railroad Telegraphers.

Miss Winifred Tait, daughter of Sir

Thomas Tait, President, Fredericton & Grand Lake Coal & Ry. Co., who had been in Europe since April, returned to Montreal by the C.P.R. s.s. Montlaurier, Nov. 1.

Lt.-Col. O. E. Talbot, one of the Canadian National Rys. directors, and J. E. Morazain, General Superintendent, Quebec District, returned to Quebec Nov. 1 after a trip over the line between Quebec and Cochrane, Ont.

L. P. Thornton, Assistant Superintendent of Colonization, C.P.R., Calgary, Alta., and Mrs. Thornton, sailed from Montreal on the C.P.R. s.s. Montrose, Oct. 26, for England, where he will spend the winter lecturing on Canada.

Sir Henry Thornton, President, Canadian National Rys., has been elected a member of the Association of Railway Executives' executive committee in New York.

Mrs. Timmerman, wife of H. P. Timmerman, formerly Industrial Commissioner, C.P.R., returned to Montreal, Nov. 3, on the s.s. Melita after spending several months in Europe.

J. H. Webb, C.P.R. Passenger Agent, Southampton, Eng., died there Oct. 19 after a short illness, aged 41. He entered the company's service in 1902 in the freight department at King William St., London, and was transferred to the Passenger Department at Charing Cross, staying there until the war, after which he was appointed chief clerk in the passenger department at the Liverpool office, being transferred to the Southampton office, Nov., 1922.

John Whittaker, chairman of Brotherhood of Railway Trainmen's grievance committee, and chairman of the Canadian National Rys. Insurance and Provident Society, London Division, died at his home in Windsor, Ont., Nov. 19.

Wm. A. Wilson, at one time General Canadian Freight Agent, New York Central & West Shore Railroads, died suddenly in Toronto, Nov. 11. As President, Fenian Raid Veterans of 1886, he was at their head, for a parade past the Governor General, when he collapsed, and died in a few minutes. He was born at Niagara Falls, Ont., in 1848, and commenced railway work in 1863 at Port Dalhousie, Ont., on the Welland Ry., now a part of the G.T.R., where he worked in the flour shed, learning telegraphy in his spare time. In Jan. 1865 he entered the Provincial Telegraph Co's service at St. Catharines, Ont., and was transferred to Toronto in April, 1886. On June 1, 1886, he went on service with the Toronto Naval Brigade, during the Fenian Raid troubles, but after 10 days was transferred to the Montreal telegraph office, on military service, remaining there after the corps was dismissed until November, when he entered the military school, passing out of it Feb. 14, 1867, with a second class certificate. On March 4, 1867, he entered the G.T.R. service at the Toronto locomotive house, and shortly afterwards was removed to Toronto union station, where he was relieving agent from 1869 until Aug. 1870, when he went to Sarnia as operator and ticket agent, remaining there nearly 6 years. On June 1, 1876, he was appointed Travelling Freight Agent, G.T.R., and on Nov. 1, 1876, was appointed Agent of the Hoosac Tunnel line, a New York Central organization operating over the Great Western, Canada Southern, Lake Shore and other connections in the west, via the then nearly completed Hoosac tunnel, to points in New England. He remained with that line until the N.Y.C. abandoned it in March, 1884, when he

was appointed Canadian Agent of the New York, West Shore & Buffalo Rd. That office was abolished in May, 1896, and he was appointed Division Freight Agent at Buffalo, having charge of Canadian business also, remaining there until May 1, 1901, when he returned to Toronto as General Canadian Freight Agent, New York Central & West Shore Railroads, continuing in that position until his retirement on July 31, 1917, after 54 years of railway service.

The Gaspé Peninsula Railways Situation.

A public meeting was held at New Carlisle, Que., Oct. 30, at which Sir Henry Thornton, President, Canadian National Rys., was present, to discuss the problem of the railway service provided along the Gaspé peninsula by the Quebec Oriental Ry., and the Atlantic, Quebec & Western Ry. between Matapedia Jet., New Carlisle and Gaspé. It is reported that after hearing the views expressed by the representatives of the various parishes and municipalities represented, Sir Henry stated that the question of taking over the two railways by the C.N.R. must be decided from the point of view of revenue in sight; that he was impressed with the 'apparent general prosperity of the country and its natural advantages, and would examine into the merits of the case and see that full justice was done to the area. A resolution was unanimously adopted asking for the incorporation of the two railways in the C.N.R. System.

Freight Car Condition and Supply.

The most outstanding feature of the Railway Association of Canada's report covering freight car condition and supply on Canadian railways as of Nov. 1, is the large car shortage reported. On that date there were demands for 1,493 more cars than could be supplied. This compared with a shortage of 502 on Oct. 1, and 553 on Sept. 1. Out of 199,255 freight cars on line, there were 11,371, or 5.7%, in bad order, so that evidently the shortage cannot be ascribed to there being an unduly large number of cars in need of repairs, as it is commonly considered that if a railway has no more than 7% of its freight equipment in bad order it is doing well.

On the U.S. class 1 roads, there were 155,637 freight cars, or 6.9% of the total on line, in need of repairs on Oct. 15. This was an increase of 4,305 over those in need of repairs on Oct. 1, at which time the bad order percentage was 5.7.

Despite record loadings of revenue freight, the U.S. class 1 railways reported a surplus of 23,895 freight cars of all kinds, and a shortage of 4,317 box cars and 3,250 coal cars.

Further details of the car supply and condition situation in Canada and the U.S. for some months past are given elsewhere in this issue, under "A.R.A. Efficiency Programme Results and Canadian Comparisons."

Fort William Car Building Plant.—A recent press report stated that the Canadian National Rys. would probably take over the Canadian Car & Foundry Co.'s car building plant at Fort William, Ont. G. E. Smart, Chief of Car Equipment, C.N.R., is credited with having said in Montreal, on Nov. 19, that the matter had not been considered, and that, as far as he knew, there was no likelihood of any such action.

Transportations Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Canadian National Rys.—A. W. ATKINS, heretofore shop foreman at Capreol, Ont., has been appointed Locomotive Foreman there, vice R. Currie, resigned.

J. BAIN, heretofore Superintendent, Bridgewater Division, Atlantic Region, which has been merged with the old Halifax Division into the new Halifax Division, has been granted leave of absence, on the expiry of which he will be pensioned.

R. A. BLACK, heretofore Division Engineer of the former Halifax Division, Atlantic Region, at Truro, N.S., has been appointed Division Engineer of the new Halifax Division, into which the former Bridgewater Division has been merged, and has been transferred to Halifax.

JAMES CUMMINGS, heretofore night charge hand, Point du Chene, N.B., has been appointed Night Locomotive Foreman at St. John, N.B., vice Geo. Crawford, placed on the Provident Fund.

W. E. DUPEROW, Passenger Traffic Manager, Central Region, Toronto, has, it was announced on Nov. 7, been given two months leave of absence. The work of his office is being carried on under his name, in charge of H. C. Bourlier, General Passenger Agent, Central Region. He will spend his leave in western Canada, including the Pacific coast.

J. T. HALLISEY, heretofore Superintendent of the former Halifax Division, Atlantic Region, at Truro, N.S., has been appointed Superintendent of the new Halifax Division, composed of the former Halifax and Bridgewater Divisions, and has been transferred to Halifax, N.S.

H. L. McELLINEY, heretofore Bridge and Building Master of the former Halifax Division, Atlantic Region, at Truro, N.S., has been appointed Bridge and Building Master of the new Halifax Division, composed of the former Halifax and Bridgewater Divisions, and has been transferred to Halifax.

A. E. PLANT, heretofore acting Comptroller, Atlantic Region, has been appointed Comptroller, Atlantic Region. Office, Moncton, N.B.

L. H. ROBINSON, heretofore Division Engineer of the former Bridgewater Division, Atlantic Region, which has been merged into the new Halifax Division, is, for the present, acting as Assistant Division Engineer, and has been transferred to Halifax.

L. J. SAULNIER, heretofore Bridge and Building Master, former Bridgewater Division, Atlantic Region, at Bridgewater, N.S., has been appointed Assistant Bridge and Building Master there, H. L. McElhiney having been appointed Roadmaster of the new Halifax Division, composed of the former Halifax and Bridgewater Divisions.

Canadian Pacific Ry.—J. RANKIN, heretofore General Agent at Yokohama, Japan, has been transferred to Kobe, as General Agent for Japan. The other officials transferred from Yokohama to Kobe are G. E. Costello, General Agent, Passenger Department; M. Fitzgerald, Special Representative; and E. Hospes, Passenger Agent. H. E. Hayward, Agent, and A. M. Parker, Passenger Agent, who were at Kobe before the Yokohama disaster, are remaining there in their former capacities. The Kobe office is at 1 Bund.

H. TAYLOR is stated in a London. Eng., cablegram, to have been appointed Passenger Agent at Southampton, Eng., vice J. H. Webb, deceased.

W. R. THOM, chief clerk, City Ticket Office, Calgary, Alta., has been appointed City Ticket Agent at Los Angeles, Cal., vice C. C. Sheldon, resigned.

E. W. TRAVIS, heretofore summer ticket agent at Banff, Alta., has been appointed City Ticket Agent at San Francisco, Cal., vice A. P. Villain, who resigned to become District Passenger Agent there for United States Lines, Managing Operator for U.S. Shipping Board.

Esquimaux & Nanaimo Ry.—L. H. SOLLY, Land Agent, Victoria, B.C., has been superannuated.

Minneapolis, St. Paul & Sault Ste. Marie Ry.—C. T. JAFFRAY, President, First National Bank of Minneapolis, and one of the M., St. P. & S. S. M. R. directors, has been elected President, succeeding G. R. Huntington, deceased, the appointment to become effective Jan. 1, after which he will devote his whole time to the railway's affairs.

Freight and Passenger Traffic Notes.

The Pacific Great Eastern Ry.'s live stock bill of lading has been approved by the British Columbia Minister of Railways.

The Vancouver Harbor Commissioners' Terminal Ry.'s freight mileage tariff, C.R.C. 1, has been approved by the Board of Railway Commissioners.

The C.P.R. has opened for traffic the Interprovincial & James Bay Ry. extension from near Kipawa, Ont., to mile 53, in Temiscaming County, Que.

The Alberta and Manitoba Governments applied to the Board of Railway Commissioners recently for a reduction of freight rates on alcoholic beverages.

The Board of Railway Commissioners has refused an application by residents of Lewvan, Sask., for an order for the establishment of a daily passenger train service each way, from Weyburn to Regina, on the Canadian National Rys. in place of present service.

The C.P.R. is reported to have carried 505,659 cans of milk into Montreal this year, up to Sept. 30. The cans are collected on the various lines up to within 150 miles from Montreal, and are handled in that city at special platforms erected at Windsor St., Place Viger, and Mile End stations.

The C.P.R. started, on Nov. 16, operating daily a 10-compartment car, in addition to regular equipment of standard drawing room sleeping cars, on train 801, leaving Toronto union station at 5 p.m. for New York, which also carries a through standard drawing room sleeping car, Toronto to Boston.

The C.P.R. announces that during December, January and February, winter excursion fares will be put in force from Dec. 1 to Jan. 5 on passenger traffic originating in Alberta and Saskatchewan, for the following U.S. points: Cedar Rapids, Chicago, Council Bluffs, Des Moines, Dubuque, Fort Dodge, Kansas City, Marshalltown, Milwaukee, Omaha, St. Louis, Sioux City, Waterloo, Iowa; good to return until April 15, 1924. Similar arrangements will be in force from

Victoria and New Westminster, B.C., Manitoba (Winnipeg and west), Saskatchewan and Alberta, to Vancouver, Watertown, S.D. Return tickets will be good 3 months from date of sale.

The Canadian National and Canadian Pacific Railways' western lines will put on sale from Dec. 1 to Jan. 5, 1924, inclusive, first class home visitors' tickets to points in eastern Canada east and south of, and including, Sudbury and Cochrane, Quebec, New Brunswick, Nova Scotia and Prince Edward Island, transit to be made 10 days from date of sale; and good for return within 15 days, after validation, within 3 months of date of sale. The fare will be one fare and a third for the round trip. Extension privileges and stop over privileges at certain points will be permitted. Westerners intending to spend part of the winter in Europe may avail themselves of the fare and a third for the round trip to St. John and Halifax.

The Canadian National Rys. will operate special trains from Toronto to Halifax, on Dec. 7, running through to the ships' sides for the sailing of three trans-Atlantic liners, on Dec. 9; and to fit in with the sailing of other trans-Atlantic liners from Halifax, will run through cars from Toronto, leaving Dec. 12, Dec. 13 and 14. The three ships sailing Dec. 9 will be the Cunard Ansonia for Liverpool via Queenston; the White Star-Dominion Line Doric for Liverpool via Belfast, and the Anchor-Donaldson Line s.s. Saturnia for Glasgow. The through cars will be run in connection with the sailings of the White Star Line Pittsburgh for Southampton, Cherbourg and Hamburg, Dec. 14; the White Star-Dominion Line s.s. Canada, for Glasgow and Liverpool, Dec. 15, and the Cunard Line s.s. Andania for Plymouth, Cherbourg and London, Dec. 16.

Freight Car Location Statistics.—The Railway Association of Canada has issued a report on location of freight cars on Canadian railways on Nov. 1, based on returns from the following railways: Algoma Central & Hudson Bay; Canadian National, including Grand Trunk Pacific; Canadian Pacific; Dominion Atlantic; Edmonton, Dunvegan & British Columbia; Kettle Valley; Napierville Jet.; Quebec Central; Quebec, Montreal & Southern; Timiskaming & Northern Ontario; Temiscouata; Toronto, Hamilton & Buffalo, as follows: number of cars owned, 213,362; home cars on Canadian foreign lines, 12,422; home cars on U.S. lines, 38,710; home cars on home roads, 162,230; Canadian owned foreign cars on home lines, 9,595; U.S. owned foreign cars on home lines, 27,430; total cars on lines, 199,255; per cent. on lines to total owned, 93.4; deficiency on lines to total owned, 14,107; home cars in bad order, 10,933; foreign cars in bad order, 438; total cars in bad order, 11,371; per cent. in bad order, 5.7; privately owned U.S. cars on lines, 2,504; privately owned Canadian cars on lines, 1,462.

Steel Rails for Canadian National Rys.—The following orders have been placed recently:—2,000 gross tons, 100 lb. A.R. A.-A. section, from Bethlehem Steel Co.'s Lackawanna plant, for Portland, Me., Division; 10,715 gross tons, 100 lb. A.R. A.-A. section, and 7,073 gross tons, 90 lb. A.R.A.-A. section, from United States Steel Corporation's Illinois steel plant, for Grand Trunk Western Lines; 1,000 gross tons, 85 lb. C.N.R. standard section, from U.S. Steel Corporation's Illinois steel plant, for Duluth, Winnipeg & Pacific Ry. Deliveries are to be made during the first three months of 1924.

Central Vermont Railway Lines in Canada Transferred.

On Nov. 1, the following Central Vermont, 5th District, lines in Canada were transferred to the Canadian National Rys. for operation: Montreal and Province Line Ry., St. Lambert to Frelighsburg, 50 miles; Marieville to St. Cesaire, 8.6 miles; Stanstead, Shefford and Chambly Rd., S.S. & C. Jct. via Farnham to Waterloo, 40.4 miles, a total of 99 miles. The operation of the portion of the latter line from S.S. & C. Jct. to Farnham, 11.6 miles, has been abandoned, and the stations at Versailles and Menardville have been closed. The C.V.R. continues to operate over the Canadian National old G.T.R. line from Montreal to St. Johns, Que., 27 miles. From St. Johns to the international boundary, between St. Armand, Que., and Highgate, Vt., 25.3 miles, it has its own line. The C.V.R. management gave notice on Oct. 29, that from Nov. 1, at 12.01 a.m., 5th District employees would report to and receive their instructions from Canadian National Rys. officials, that the trains would be dispatched from Montreal, and that the status of employees on the district would remain unchanged until further notice.

The lines which have been transferred are now included in the C.N.R. Montreal District and the following C.N.R. officials have jurisdiction over them: W. R. Davidson, General Superintendent; F. A. Rutherford, Superintendent of Transportation; H. C. Swartz, Superintendent of Bridges and Buildings; W. Bibby, Superintendent of Track; J. J. Ginty, Superintendent of Signals; J. J. Connelly, Superintendent, St. Lawrence Division; W. H. McEwan, Chief Dispatcher, St. Lawrence Division; W. Walker, Division Engineer; P. E. Demers, heretofore Trainmaster, 5th District, C.V.R., and Agent at Farnham, is continued in that position on the C.N.R.

Machinery Orders.—The Canadian National Rys. has given the following orders recently: 48 in. 300-ton hydraulic wheel press; electric travelling crane; 96 x 84 x 45 ft. frame plater with motor; no. 5 Beament locomotive frame slotting machine; ER-1 air compressor, H-6 in. compressor; 26 in. crank planer and shaper; axle and journal turning lathe; locomotive cylinder and piston valve boring machine; compressed air after cooler; Pels-Lusef no. 21 universal punch. The orders were divided among John Bertram & Son Co., Canada Machinery Corporation, Canadian Fairbanks-Morse Co., Canadian Ingersoll Rand Co., Canadian Westinghouse Co., Dominion Bridge Co., and Rudel Belnap Machinery Co.

Quebec Bridge Roadway.—It was reported in Quebec, Nov. 19, that negotiations were practically completed between the Dominion and Quebec Governments respecting the construction of a highway section on the Quebec Bridge. It is said that the design of the bridge is such that a roadway could be added when thought necessary, and that estimates which have been prepared show that it could be added at a cost of about \$300,000. The question of the appropriation of the cost of the work between the Dominion and Quebec Governments is said to have been practically decided, and that work will probably be started some time in 1924, and completed in 1925.

The C.P.R. has promised to give \$5,000 towards the \$125,000 which the Royal Jubilee Hospital, Victoria, B.C., is trying to raise for additional buildings.

Canadian Industrial Traffic League's Annual Meeting, Etc.

The Canadian Industrial Traffic League, which is composed of over 100 traffic directors, managers, commissioners, representatives and other officials in charge of traffic for industrial and commercial organizations, has for its objects, as stated in its constitution, to promote a better understanding by the public, provincial and Dominion governments, of the needs of the traffic world; to secure modifications of present laws, regulations and rulings where they are harmful to the free interchange of commerce; to advance fair dealing; to promote, conserve and protect commercial and transportation interests; to co-operate with the Board of Railway Commissioners for Canada, other organizations, and the transportation companies, thus bringing about better conditions.

The annual meeting was held in To-

R. J. Fitzgerald,

Traffic Manager, F. W. Woolworth Co., Toronto, and President, Canadian Industrial Traffic League.

ronto, Nov. 21, the President, W. H. Dickie, Assistant Traffic Manager, Imperial Oil Ltd., being in the chair. Reports from the various committees and a number of other important matters were dealt with. The following officers, etc., were elected: Honorary President, J. E. Walsh, General Manager, Canadian Manufacturers' Association, Toronto; Honorary Vice Presidents, T. Marshall, Manager, Traffic Department, Toronto Board of Trade; J. K. Smith, Manager, Transportation Bureau, Montreal Board of Trade; D. McLean, Manager, Transportation Department, Hamilton Chamber of Commerce. President, R. J. Fitzgerald, Traffic Manager, F. W. Woolworth Co., Toronto. Vice President, W. R. Ingram, Traffic Manager, Swift-Canadian Co., Toronto. Secretary Treasurer, H. W. Blahout, Traffic Manager, Dunlop Tire & Rubber Goods Co., Toronto. Executive council, Alex. Bell, Traffic Manager, General Motors Ltd., Oshawa, Ont.; S. B. Brown, Manager, Transportation Department, Canadian Manufacturers' Association, Toronto; F. W. Dean, Traf-

fic Manager, Steel Company of Canada, Hamilton, Ont.; W. H. Dickie, Assistant Traffic Manager, Imperial Oil Ltd., Toronto; C. LaFerle, Traffic Manager, Maple Leaf Milling Co., Toronto; W. J. McLean, Traffic Department, Massey-Harris Co., Toronto; W. C. Thompson, Manager, Traffic Department, Goodyear Tire & Rubber Co., Toronto. Auditors, G. Burnet, Traffic Manager, Office Specialty Company, Newmarket, Ont.; W. Minty, Traffic Manager, Gunns Ltd., Toronto.

The League held its annual dinner on the evening of Nov. 21, in the Toronto Board of Trade's restaurant, when, in addition to its members, a number of railway officials and others were guests, President Dickie occupying the chair. Prof. Jackman, of Toronto University, introduced the principal guest, S. J. McLean, L.L.B., Assistant Chief Commissioner, Board of Railway Commissioners, who gave a most comprehensive address on the history of traffic regulations, the Board's work, etc. The President elect, R. J. Fitzgerald, moved a vote of thanks to him, which was seconded by Vice President W. R. Ingram, who dwelt on the necessity of thorough education for traffic men.

St. Malo Shops Enquiry.—R. A. C. Henry, Director, Bureau of Economics, Canadian National Rys., who was commissioned recently to make investigations into these railways, began his inquiries at the St. Malo shops, Quebec, Oct. 31. He is reported to have stated that there had been numerous complaints regarding interior affairs at the shops, the nature of which he was unaware, which the Acting Minister of Railways thought should be investigated. He was prepared to hear, under oath, any evidence that might be offered, and to investigate it. At a political meeting in Quebec, Nov. 8, the Quebec Minister of Agriculture stated that the heads of the departments in the shops were men who did not understand French, and that practically the whole of the other men employed at the shops were French. The investigation is being proceeded with by Mr. Henry, the hearings being in camera.

The number of railway accidents throughout Canada, reported to the Board of Railway Commissioners during October, was 342, in which 10 employees and 16 others were killed, and 32 passengers, 263 employees and 78 others were injured. One employee was injured in a highway crossing accident. Included in "others" were 4 persons killed and 55 injured in highway crossing accidents, in which the crossings were protected in 4 cases by bell, in one case by a flagman, in 3 cases by watchmen, and in 3 cases by gates. In 24 of the 32 highway crossing accidents, automobiles were involved, resulting in 2 persons being killed and 49 injured. In 5 highway crossing accidents, pedestrians were involved, 4 being injured and 2 killed, while wagons were involved in 3, with 3 persons injured.

Canadian National Rys. Directorate.—An Ottawa press dispatch of Nov. 16 says that A. J. Young, formerly in the wholesale grocery business at North Bay, Ont., and a former President of the Ontario Liberal Association, now of Toronto, and George Wilkie, K.C., of Toronto, are among those most prominently mentioned for appointment to fill the vacancy on the C.N.R. board caused by R. P. Gough's resignation.

Canadian National Railways Construction, Betterments, Etc.

Branch Line Construction.—An Ottawa press dispatch states that the Government will introduce a bill next session for the construction of C.N.R. branch lines, in place of the one which was rejected by the Senate last session. It says that, while it is certain that legislation will be brought in, an undecided point is as to whether all the projects originally incorporated will be included, and also whether it will follow the initial form.

Atlantic Region Tie Contracts.—A press report states that contracts for hardwood ties have been let to J. W. MacDonald, Campbellton, N.B.; J. H. Fleming, Woodstock, N.B., and H. Grier, Montreal.

Atlantic Region Flood Damage.—We have received advices as to the extent of the damage done to the lines by the heavy rains and subsequent floods, beginning Sept. 30. The damage was centered particularly on the New Glasgow Division between Truro and Sydney, N.S.; and more or less damage to the track was done on the Bedford, Scotia, Sunny Brae, Pugwash and Oxford Subdivisions. On the Sydney Subdivision the most serious damage consisted of the washing out of a fill at mile 70.5, to the depth of 4 ft., and another fill at Bras d'Or to a depth of 3 ft. On Mulgrave Subdivision, damage was reported from 23 separate points. At mile 4.04, the toe of the side hill cut and embankment slipped for a length of 200 ft., requiring 250 yards of material to support the bank, for the time being; a crib or dyke 100 ft. long will have to be built at the upper end of the location to divert the water from the foot of the track. About 600 ft. of embankment at mile 6.1, requiring 2,500 yards of gravel and 400 yards of cinders for a fill, the relining of the track, building of a stone dyke at the upper end to deflect the water, and some rip rap work. In the vicinity of mile 16, washouts, ranging from 10 to 15 ft., were repaired at 8 points. Similar washouts occurred at mile 13.2, east end of Stellarton yard, miles 42, 42.1, 52 (1,000 ft. long), 57.2, 57.4, 69.3, 70.3, 76.2 (105 ft. concrete slab bridge carried away), 78, 79, at Brierley Brook siding (about 1,000 ft. of fill washed out), 85, 86.5, 88.5 (about 1,500 ft. of bank washed out), 94.9 (about 800 ft. of bank washed out), 104.6 (about 600 ft. of bank washed out), 104.8 (about 300 ft. of bank washed out), 107.6 and 110.8. Several mud slides near Folley, on Springhill Subdivision, resulted in train 4 being delayed about 10 hours. All repairs at the various points were completed as quickly as possible, except the bridge at James River, where a temporary structure was made by driving piles, the work being completed in time to allow the first passenger train to cross on Oct. 6, at 2.15 p.m.

St. John Diamond Renewal.—A new manganese steel diamond crossing is reported to have been placed at Mill St., St. John, N.B.

Alma & Jonquieres Ry. Junction.—The Board of Railway Commissioners has approved location for a freight station at the Alma & Jonquieres Ry. junction with the C.N.R., at mile 199.6, Jonquieres Subdivision, near Hebert, Que.

Three Rivers-St. Barnabe Branch.—We are advised that the management knows nothing about a proposal to build a branch from St. Barnabe to Three Rivers, Que., in connection with the har-

bor improvement plan at the latter place. (Nov., pg. 537.)

East Moira River Bridge.—The Board of Railway Commissioners has authorized the operation of trains over the bridge at Stoco Lake, East Moira River, Hungerford Tp., Hastings County, Ont.

Bridgeburg Terminals.—A press report states that plans are under consideration for the enlargement of the terminal yards at Bridgeburg, Ont., and that work that is at present done in the yards at Black Rock, N.Y., will be transferred to Bridgeburg. It is also reported that an interlocking system has been installed on the International Bridge, which connects Bridgeburg and Black Rock. The question of the enlargement of the bridge or the erection of a new one is also stated to be under consideration.

Stratford Locomotive House.—The eastern entrance and a considerable portion of the eastern end of the locomotive house at Stratford, Ont., were destroyed by fire Oct. 28. The building is an old one, largely of frame.

St. Thomas Shops.—We are advised that proposals for the improvement of the C.N.R. shops at St. Thomas, Ont., used by the Wabash Rd., do not include the erection of new shops, as stated in a press report. The work to be done will consist of improvements to the locomotive house fittings. The report stated that \$92,000 had been provided in the estimates for 1924 for this purpose. Such estimates would, of course, have to be approved by Parliament.

Nipissing Division Bridges.—The Board of Railway Commissioners has authorized the operation of traffic over the bridges at Laronde River, mile 74.7, Alderdale Subdivision, and at the Little Madawaska River, Deacon Tp., Nipissing, Ont., Nipissing Division, Northern Ontario District, Central Region.

Longlac-Nakina Cutoff.—The cutoff between Longlac and Nakina, Ont., 29.4 miles, described in Canadian Railway and Marine World for February, pg. 71, is practically completed, only a few miles of ballasting and surfacing, and some train filling, remaining to be done. At the time of writing (Nov. 20), the railway management is employing about 600 men on ballasting and track lifting. The greatest number of men employed at any one time by the contractors for the grading, Foley Bros. & Hervey, was about 1,200. Tracklaying was completed early in November, about five-sixths of it having been laid southward from Nakina. Untreated ties and 85 lb. steel were used. The track laying was done, and the ballasting and surfacing are being done, by railway forces, and at the time of writing the contractors have taken out a large part of their outfit, although they still have some men employed trimming the grade. Ballast is being drawn from three pits, two between Longlac and Nakina, one of which is supplying material for train filling only, and from a pit on the Longlac Subdivision. Ballasting will be completed and the track placed in condition for operation before the end of this year. As stated in a preceding issue, the intention is to remove the terminal facilities from Grant, 15.9 miles east of Nakina, to Nakina, and the yard at Nakina is nearing completion, as is also a 12-stall locomotive house there. Following the completion of these facilities, the yard at Grant will be taken up and terminal

operation transferred to Nakina. At Longlac, a small locomotive house and a few yard tracks will be provided. The construction of this cutoff, which connects Longlac, 480.7 miles northwest of North Bay, on the former Canadian Northern Ontario Ry., with Nakina, 272.25 miles west of Cochrane on the former National Transcontinental Ry., was carried on under the supervision of R. A. Baldwin, District Engineer of Construction, C.N.R., with Capt. K. G. Polylank, as Division Engineer of Construction, in direct charge. The resident engineers were: C. H. N. Spafford, H. L. Benson, W. B. Redman, and Hector Macneil. O. W. Swenson, Secretary-Treasurer, Foley Bros., was in charge of the work for the contractors.

Kashabowie Subdivision Track Revision, etc.—The Board of Railway Commissioners has authorized the opening for traffic of the second track on the main line between miles 2.74 and 6.10; the line between miles 6.1 and 7.1; and the Rowan revision from Conmee Jct., mile 36.56, to old mile 38.42, all Kashabowie Subdivision, Port Arthur Division, Western Region.

Roblin Second Track.—The Board of Railway Commissioners has authorized the construction of a second track across the east and west road allowance between Secs. 4 and 9, Tp. 26, Range 28, west principal meridian, at Roblin, Man.

Regina Hotel.—In the early days of the Grand Trunk Pacific Ry. construction, an agreement was entered into with the city of Regina, Sask., for the erection of an hotel under terms which were confirmed by the Saskatchewan Legislature in 1912-13. The war and the consequent financial situation prevented the agreement being carried out, and nothing was heard of the project until recently. A. E. Warren, General Manager, Central Region, C.N.R., was present at the Regina City Council meeting, Nov. 9, when the matter was discussed, and plans for the proposed hotel, which it is estimated will cost about \$1,000,000, were presented, it being stated that if the plans were approved, an amount would be included in the 1924 estimates. The council passed a resolution on Nov. 15, as far as it could possibly do so, accepting the plans as complying with the 1912 agreement, and agreeing to amend the bylaw in such details as may be necessary.

Regina to Northgate, Sask.—A press report states that during the summer certain work was done on the Regina-Northgate Branch, and that trains are running through Lampman, Sask., doing away with Minard station.

Gravelbourg Extension.—The Board of Railway Commissioners has amended its order of Oct. 13, 1922, respecting the opening for traffic of the extension from Gravelbourg, Sask., mile 79, to Hodgeville, mile 109, by providing that the speed of trains shall not exceed 15 miles an hour.

North Battleford Branch.—The Board of Railway Commissioners has amended its order of Nov. 28, 1921, respecting the opening for traffic on the extension of this branch from Turtleford to St. Walburg, Sask., mile 57 to 77.8, by providing a 12 mile an hour limit to the speed of trains.

The Atchison, Topeka & Santa Fe Ry. has given a contract for erecting an apprentice school building, at San Francisco, Cal., to cost \$80,000.

Railway Development, Projected Lines, Surveys, Construction, Betterments, Etc.

Alberta & Great Waterways Ry.—The Alberta Minister of Railways took members of the Legislature and others over the line to the present terminus at Waterways recently, to show the improvements made during the three years the Government has had control of the line, and to ascertain what further work is necessary.

Alma & Jonquiere Ry.—J. B. Duke, New York, President, Quebec Development Co., which is building a large hydro-electric development plant at the Grande Discharge of Lake St. John, Que., necessitating the construction of a railway from Hebertville to the site, 10 miles, visited the work recently. (Sept., pg. 439.)

Burrard Inlet Tunnel & Bridge Co.—The contract entered into between this company and the Northern Construction Co. Ltd., and J. W. Stewart, includes the complete construction of a single track railway and highway bridge across the second narrows in Burrard Inlet, Vancouver, B.C., together with the approaches and overhead crossing of the C.P.R. from Cariboo St., Vancouver, to the bridge, and on the North Shore, a road and railway across the Indian reserve and a bridge to consist of three 50 ft. plate girder spans across Lynn Creek. The bridge proper will consist of a 185 ft. bascule span over the navigable portion of the channel, at the south end of which will be a 150 ft. steel span, and on the north end, a 300 ft. steel span. The bascule span is being designed by the Strauss Bascule Bridge Co., but the designing of the other steel work has not yet been settled. These steel spans will be carried on piers, consisting of groups of cylinders of concrete resting on a foundation of piles driven to rock. The floor of the bridge will be 15 ft. above extreme high water. The approaches will be built of creosoted piling and timber trestle, that on the south side consisting of 10 bents, and that on the north side consisting of 34 bents. The highway will have a descending gradient of 5% from Vancouver to the bridge proper, and a similar gradient from the end of the bridge proper to the shore line. The railway gradient from the north shore to the bridge will be 0.50%. We are officially advised that some work in the way of clearing, etc., has been started. A press report of Nov. 9, stated that the contractors had had a scow built for pile driving, and that 6 of the concrete cylinders for the piers had been completed. Wm. Smaill is the contractors' Chief Engineer.

The company is reported to be negotiating with the B.C. Government to connect the Pacific Great Eastern Ry. with the northern end of the bridge. The question of the loading of the bridge was, it is reported, discussed, the Government being desirous of having its strength increased. (Nov., pg. 536.)

American Niagara Bridge Co.—The American Niagara Rd. Co., which is the general company proposing to build a bridge across the Niagara River, from Black Creek on the Canadian side, to Grand Island, thence to the United States shore, with railway connections, has been authorized by the Interstate Commerce Commission to build a line from the New York Central Rd. at Tonawanda, N.Y., across the east branch of the Niagara River and Chippawa channel to the International Boundary at the centre of the

bridge across the river, connecting there with the Canadian Niagara Bridge Co.'s undertaking, which includes a railway from the Michigan Central Rd., at Welland, to the centre of the bridge across the river. (Nov., pg. 586.)

Canadian Puget Sound Lumber & Timber Co., will, a press report says, build a logging railway, 40 miles long, from Sooke Harbor to Port Renfrew, Vancouver Island, B.C.

Esary Timber Co.—We are advised that this company, representing some United States lumber interests, has secured a large area of timber in the vicinity of Horne Lake, Vancouver Island, and is building a logging railway from Deep Bay southwesterly to Horne Lake, about 4 or 5 miles. It is expected that a mill will be built at Deep Bay.

Esquimalt & Nanaimo Ry.—The branch line from 2 miles west of Port Alberni, on the line to Alberni, to Great Central Lake, 11 miles, construction of which was started in 1919, will, a press report states, be completed and put in operation early in 1924. Grading has been completed, and track was laid to Stamp River, 3.75 miles, in 1922.

The railway span of the new Johnson St. bridge, Victoria, was put into use Oct. 25, thus making the beginning of the last stage of construction, viz.: the raising of the grade on lower Johnson St. to conform with the bridge level. (Sept., pg. 439.)

Grand Lake Ry. Co.—Application will be made to the Quebec Legislature to incorporate a company, with this title, to build a railway from near the Bell River, on the Canadian National Rys., to near Twenty-one Miles Bay, Grand Lake Victoria, on the Ottawa River; to operate ships and engage in a general transportation business on the waterways south of the National Transcontinental Ry., between Nottaway (Senneterre station), mile 399.9 from Quebec, and Cunus, mile 433.2 from Quebec, and the Ottawa River, and elsewhere on the Ottawa River above Quinze River. The applicants are Hon. George Bryson, Fort Coulonge, Que.; Hon. George Gordon, North Bay, Ont.; J. B. Fraser, G. E. Fauquier, Ottawa; A. J. Nesbitt, P. A. Thompson, Montreal. A press report states that the projected railway will be located a short distance from the water power on the Megiscane River, leased recently by the Tobin interests, where a pulp mill is proposed to be erected within the next two years, and that it will cross a colonization centre, and a large lumbering area.

Pacific Great Eastern Ry.—The British Columbia Premier, in addressing the Legislature on the finances and prospects of the Pacific Great Eastern Ry., on Nov. 6, stated that investigations were being made to see if it is possible to do away with the difficulties on a section of the roadbed from 7 miles south of Quesnel to the north of the Cottonwood River, 25 miles, on which there are several sections of slowly sliding masses of earth, which make maintenance very difficult and expensive, and that a diversion of track was being looked into, but nothing would be done without the fullest investigation. In regard to an extension to the Peace River district, the Government was confronted with the construction of 300 miles of line at a minimum, at a roughly estimated cost of about \$25,000,000. It was considered advisable to refrain from proposing that such construction be undertaken until such time as all

other possible solutions of the situation have been exhausted. Representations were made to the Canadian National Railways and to the C.P.R., and these two railways are investigating the possibilities of the Peace River country. (Nov., pg. 536.)

Quebec & Chibougamou Ry.—A press report states that the company proposes to make an early start on the construction of its projected railway, that the section on which construction is likely to be started will be at the northerly end of Lake St. John, with a view of completing a belt line round the lake, connecting with the Canadian National Rys. Quebec & Lake St. John line, and the Roberval-Saguenay Ry. There have been several similar announcements before which have not materialized.

Timiskaming & Northern Ontario Ry.—We are officially advised that on Nov. 1, the T. & N. O. R. Commission took over from Grant Smith & Co. and MacDonnell, Limited, the contract for the construction of the extension of the line from Cochrane to the Abitibi River opposite New Post, mile 70. The work to be done by the Commission consists of such ballasting and train filling as has not been completed between Cochrane and mile 44.4, and tracklaying, ballasting and train filling from between mile 44.4 and 70. It is not the intention to proceed with any of this work during the winter. On the section from Cochrane to mile 44.4, the Commission put a train service in operation, Nov. 1, as far as Island Falls Jct., mile 43, the service consisting of a mixed train leaving Cochrane on Tuesdays, Thursdays and Saturdays, at 9 a.m., and return, leaving Island Falls Jct. at 1.30 p.m. on the same days. While this service is being given by the operating department, the maintenance of the track will remain with the Engineering Department until the ballasting, trestle filling, etc., are completed.

The Board of Railway Commissioners has authorized the building of a bridge over Blanche River, mile 19.5, on the extension from Swastika to the Kirkland Lake mining areas.

A press report states that, acting on engineers' reports on three suggested routes for a branch line to the South Lorrain silver mining district, the Commission has decided to have a location survey made for a line from Cassidy siding, 3 miles south of Cobalt.

A press report states that contracts have been let for ties as follows: J. Clark, 25,000; J. Mongeon, 100,000; Grant & Dunn, 75,000; P. McCool, 100,000; Harrie Tie & Lumber Co., 50,000. (Nov., pg. 536.)

Vancouver Harbor Ry.—The Board of Railway Commissioners has authorized the Vancouver Harbor Commissioners to open for traffic, temporarily, the portion of its terminal railway between the Dominion Government elevator and the Ballantyne pier. This piece of track is a mile long, and connects with 2 miles of tracks on Ballantyne pier, making 3 miles of new tracks placed in operation Oct. 19. The Commissioners also own about 2 miles of tracks partly on Granville Island, which were electrified in 1922, and are operated under an agreement by the British Columbia Electric Ry. (Aug., pg. 376.)

The Victoria Lumber & Manufacturing Co. is reported to have made considerable progress with building its logging railway along the south shore of Cowichan

Lake, Vancouver Island, in the direction of the Robertson River timber areas. Several miles of track are reported to have been laid from Cowichan Lake station, on the Esquimalt & Nanaimo Ry.

Grain Rate Reductions in United States Opposed by Railways.

As stated in Canadian Railway and Marine World for November, U.S. President Coolidge suggested to President Rea, of the Pennsylvania Rd., that a reduction in export wheat rates, possibly accompanied by an increase in the export coal rates to bring them to the domestic rate levels, would be desirable. Although this was apparently only an unofficial suggestion, a committee of railway executives met in New York on Oct. 30 and drafted a reply to the President's suggestion as follows: "Such a reduction in rates will not lessen the competition with foreign countries, notably the Argentine and Canada, from which latter countries exports are far greater in volume than from the U.S., and therefore will not stimulate the movement from this country, particularly since Canadian railways have always concurrently adjusted their rates on export wheat with respect to those currently carried by the U.S. lines, and there is no reason to believe they will make any exception in this instance. It is impracticable to confine the proposed reductions to eastern roads, as at one time thought possible, as inevitably the western roads would be forced to make corresponding reductions on wheat for export through the Gulf and Pacific coast ports, because of the reduction on eastern roads to the Atlantic seaboard. It is generally conceded that the western roads are in no position to stand any reduction whatever in their revenues. It would not be practicable to confine the proposed reductions to wheat alone, as corresponding reductions would inevitably follow on flour, other grain, and their products. The proposed reduction in export wheat rates would result in a material loss of revenue to all the carriers, many of which, in the east as well as in the west, are not in position to earn such a return as will re-establish credit and attract the capital necessary to provide adequate transportation facilities."

The railway executives approached the President to make known their decision on his suggestion, but, apparently on account of his desire not to appear to be interfering in a matter within the Interstate Commerce Commission's province, they were referred to the Commission, to which they presented the foregoing statement.

The Interstate Commerce Commission had announced, on Oct. 16, that on the then record, it considered rates on grain, grain products and hay in the western U.S. to be reasonable, but on the same day, in response to much agitation by various agricultural associations, it issued an order for a general investigation into rates on grain and grain products. Hearings have been set for Dec. 5, at Spokane, Wash.; Dec. 11, at San Francisco, Cal., and Dec. 17, at Phoenix, Ariz. Proposals were made to the Commission by various industrial associations throughout the U.S. that an investigation be held into rates on basic commodities generally, but on Nov. 7 the Commission refused to do this.

The agricultural associations applying to the Commission for grain rate reductions cited the lower rates in Canada as one of the reasons for considering grain rates in the U.S. unduly high.

Traffic Orders by Board of Railway Commissioners.

Freight Rates on Gypsum Rock.

34,341, Oct. 20.—Re application of Canada Cement Company, Montreal, for an order adjusting rates on gypsum rock, in carloads, from Caledonia, Ont., to Montreal and Ottawa, on a basis not to exceed the rates now in effect on crushed stone: Upon reading what is filed in support of the application, and the report of its Chief Traffic Officer, the Board orders that the Michigan Central Rd. Supplement 69 to Tariff C.R.C. no. 3,074, effective Nov. 3, 1923, in so far as it relates to rates on gypsum rock, be suspended, pending a hearing by the Board.

C.P.R. Standard Freight Tariff.

34,344, Oct. 22.—Re application of Canadian Pacific Ry., under sec. 330 of the Railway Act, 1919, for approval of its Standard Freight Tariff C.R.C. no. E-4097: Upon the report and recommendation of its Assistant Chief Traffic Officer, the Board orders that the said tariff be approved.

Football Excursion Rates for Kingston, Ont.

34,345, Oct. 22.—Re application of Queen's University, Kingston, Ont., for an order extending to the University and to the City of Kingston the same privileges in the matter of excursion rates on the railways in connection with the annual football games, as are enjoyed by Toronto, Montreal, and other large cities: Upon hearing the application in Ottawa, Oct. 16, 1923, Queen's Athletic Board of Control, Queen's University Student Body, the University of Toronto, the City of Kingston, the Kingston Board of Trade, the Canadian National and Canadian Pacific Railways, and certain commercial interests of the City of Kingston being represented, and what was alleged, the Board orders that the application be refused.

Express Rates on Homogenized Cream.

34,374, Oct. 27.—Re application of Saskatchewan Creamery Co., Moose Jaw, and Saskatchewan Co-operative Creameries, Regina, for a ruling as to whether pasteurized cream includes homogenized cream, and whether special commodity rates by express apply on homogenized cream: Upon hearing the application at Ottawa, April 17, at Regina, July 12, and at Winnipeg, July 16, the applicants, the Express Traffic Association of Canada, and the Crescent Creameries being represented at the hearing, and what was alleged, the Board declares that express commodity rates on cream are not applicable to homogenized cream.

Freight Rate on Soda Ash.

34,400, Oct. 31.—Re complaint of Guy Tombs, Limited, Montreal, against rate of 37c per 100 lb. on carload of soda ash shipped from Walkerville, Ont., to Mille Roches, Ont., as contrasted with a rate of 35c contemporaneously in force to Windsor Mills, Que.: Upon reading what is filed in support of the complaint, and on behalf of the Canadian National Ry. Co., the report of its Chief Traffic Officer, and its appearing that the C.N.R. Co. improperly indicated Windsor Mills as competitive in its tariff C.R.C. no. E-4746, effective Aug. 1, 1922, the Board declares that the said rate of 37c per 100 lb. on the shipment complained against was in violation of the long and short haul clauses of the Railway Act, 1919.

Public Works Department Appointments.

Kenneth M. Cameron, heretofore Assistant Chief Engineer, Public Works Department, Ottawa, has been appointed Chief Engineer, succeeding the late A. St. Laurent. After matriculating, he graduated at the Royal Military College at Kingston, in June, 1901, and in April, 1902, graduated from McGill University, Montreal. From April to Dec., 1903, he was in the C.P.R. Chief Engineer's office, and subsequently was with the Canadian Niagara Power Co.; lecturer at McGill University, Montreal, with the Pennsylvania Rd.; Bar Harbor & Main River Power Co., Maine; Ambursen Hydraulic Construction Co., Wyoming; Smith, Kerry & Chase, consulting engineers, Toronto; Dominion Public Works Department, at London, Sherbrooke and Ottawa, to Sept., 1918, when he was appointed Assistant Chief Engineer. R. de B. Corriveau has been appointed Assistant Chief Engineer of the Department. He was born at West Hoboken, N.J., Jan. 24, 1877, and graduated from McGill University, Montreal, in 1900.

R. C. Desrochers, who has been Secretary of the Public Work Department at Ottawa since July 1, 1910, has been appointed Assistant Deputy Minister, which position had been vacant since Feb. 1922, when Arthur St. Laurent (since deceased) was appointed Chief Engineer. Lewis H. Colman, heretofore Assistant Secretary of the Department, has been appointed Secretary of the Department. These appointments were made by the Civil Service Commission.

Canadian Pacific Railway Land Amortization Plan.

Canadian Railway and Marine World for June published the announcement by E. W. Beatty, President, C.P.R., of the company's new policy in regard to its land contracts, under which all land contracts were to be rewritten and the indebtedness spread over 34 years on an amortization plan. A meeting of contract holders was held in Calgary, Alta., Oct. 30, at which a resolution was passed approving of a proposal adopted previously to refuse to sign the new contract, on Nov. 1, as required, and making a request for 20-year contracts, with interest payable on arrears only and present relief on certain payments, with a contract limit of \$25 an acre, exclusive of improvements. The meeting decided to oppose any proceedings that might be taken to enforce the new contract in the courts and to carry the matter to the Imperial Privy Council if necessary. A fund of \$12,000 is reported to have been pledged by contract holders to protect their interests.

Grain Elevator for Edmonton.—The Dominion Parliament at its last session appropriated \$200,000 towards the construction of a grain elevator at Edmonton, Alta. Canadian Railway and Marine World is officially advised that C. D. Howe & Co., Port Arthur, Ont., have been instructed to prepare plans and specifications for an elevator of 2,500,000 bush. capacity.

St. John's Ambulance Association.—Sir Henry Thornton, President, Canadian National Rys., on Nov. 13, presented the medallions awarded members of the office staff at Montreal, in the third year examinations in first aid work.

Canadian National Railways Atlantic Region Division Changes.

Canadian Railway and Marine World for October gave full particulars of changes which it was proposed to make by merging the Bridgewater Division of the Atlantic Region with the Halifax Division, under the latter name, abolishing the Bridgewater Division headquarters at Bridgewater, N.S., and placing the whole new division under J. T. Hallisey, Superintendent of the old Halifax Division, transferring him from Truro to Halifax. At that time we published a circular issued by W. U. Appleton, General Superintendent, on Sept. 24, and approved by L. S. Brown, General Manager, Atlantic Region, announcing that the change would be effective Sept. 30, and we also stated that the Dominion M.P.'s for Colchester and Lunenburg had telegrams from the Minister of National Defense that the order had been suspended until the President, Sir Henry Thornton, could visit Nova Scotia, about the middle of October, when he would receive representations, this announcement being followed by General Superintendent Appleton issuing, on Sept. 28, a circular cancelling the one issued Sept. 24. Sir Henry Thornton also telegraphed the member for Lunenburg that the change would not be made until he visited Nova Scotia and explained personally to the representatives of the districts interested, the reasons for making it. Sir Henry went to Nova Scotia towards the end of October and met people in both Truro and Bridgewater, when he explained the reasons for the change and announced that the original decision would go into effect.

On Oct. 27, General Superintendent Appleton issued the following circular: "Circular 20, dated Sept. 28, is hereby cancelled. Effective Oct. 28, the position of Superintendent at Bridgewater will be abolished and the Bridgewater Division will become a part of the Halifax Division, under the jurisdiction of J. T. Hallisey, Superintendent, with headquarters at Halifax."

J. T. Hallisey, heretofore Superintendent of the old Halifax Division, has been transferred to Halifax, with jurisdiction over the new Halifax Division; extending from Truro via Halifax to Yarmouth, and the various connecting branches. J. Bain, who was Superintendent of the Bridgewater Division, at Bridgewater, has been given leave of absence, at the end of which he will be pensioned. H. V. Musgrave, Assistant Superintendent of the old Halifax Division, remains as Assistant Superintendent at Halifax for the present. W. E. Robinson, Assistant Superintendent, old Bridgewater Division, at Bridgewater, remains as Assistant Superintendent there for the present. The train dispatching offices at Truro and Bridgewater have been abolished, and all dispatching for the new division is being done from Halifax. M. M. McLearn, Chief Dispatcher of the old Halifax Division, having been transferred from Truro to Halifax. R. A. Black, Division Engineer, old Halifax Division, has been transferred from Truro to Halifax, and given jurisdiction over the new division. L. H. Robinson, heretofore Division Engineer, Bridgewater Division, is acting as Assistant Division Engineer at Halifax. T. W. Hennessey, Master Mechanic, has been transferred from Truro to Halifax. The Car Foreman, Locomotive Foreman and Yardmaster remain at Truro as heretofore. H. A. Mc-

Ellhinney, Bridge and Building Master, old Halifax Division, has been transferred from Truro to Halifax, and given jurisdiction over the whole new division. L. J. Saulnier, heretofore Bridge and Building Master, Bridgewater Division, at Bridgewater, has been appointed Assistant Bridge and Building Master there. C. W. Archibald, Roadmaster, has been transferred from Truro to Halifax, and has charge of the line between those points, and the Dartmouth branch. O. H. Lohnes, Roadmaster, has charge of the line between Halifax and Bridgewater, and is located there, having succeeded R. Dulhantry, deceased.

Proposal to Tax Publicly Owned Utilities.

The following circular was issued by the Niagara Falls Chamber of Commerce early in October to chambers of commerce and boards of trade throughout Ontario: "The Niagara Falls Chamber of Commerce has submitted the following resolution to the Ontario Associated Boards of Trade and Chambers of Commerce for discussion at the annual meeting in Hamilton on Nov. 15 and 16:—

"Resolved: That the Ontario Associated Boards of Trade and Chambers of Commerce places itself on record as approving of the principle of taxation of all publicly owned utilities, in the same manner as would be the case if such utilities were privately owned; and that the association shall memorialize the Ontario Government to enact such legislation as will enable any municipality to levy and collect such taxation."

"We feel that it involves a principle that will appeal to every municipality in the province. While we believe that the people generally are in sympathy with the principle of public ownership, the only way that the burden of taxation may be equitably distributed is that utilities of every nature, either publicly or privately owned, shall contribute a just share of such taxation. We trust that this resolution may meet with your approval and that your delegates who attend the meeting will be prepared to give it an intelligent and hearty support."

The motion was discussed at considerable length, being approved by delegates from Toronto and Hamilton, but was opposed by those from smaller places, including Kitchener, Orillia, Owen Sound and Preston, the delegates from which appeared to think that the proposed taxation would increase the cost of their power. It was carried by one vote, 21 voting for and 20 against.

Retort to a Railway Director's Wife.

One of a party of men left his seat in an already crowded train to go in search of something to eat, leaving a rug to reserve his place. On returning he found that, in spite of the rug and the protests of fellow passengers, the seat had been usurped by a woman. With flashing eyes she turned upon him:

"Do you know, sir, that I am one of the directors' wives?"

"Madam," he replied, "were you the director's only wife I should still protest."—The Argonaut.

The American Railway Association's Signal Section held its 13th meeting in New York, beginning Nov. 14, the economics of signaling and highway crossing protection being the chief subjects discussed. The next annual meeting will be held in Chicago, March 13 and 14, 1924.

Government Operation of Jamaican Railways Reported Against.

A Kingston, Jamaica, press dispatch of Nov. 6, stated that Lt.-Col. D. F. Hammond, Royal Engineers, who was commissioned to make recommendations to the Colonial Government as to the development of transport facilities throughout the island, on an economic basis, by railway, water, or otherwise, has reported to the Duke of Devonshire, Secretary of State for the Colonies, expressing his disbelief in state ownership, or control, of enterprises which are expected to show a profit, and stating that a government cannot run even light railways as economically as private individuals and companies.

The Jamaican Government Ry. has about 200 miles of 4 ft. 8½ in. gauge, and operates 44 locomotives, 34 passenger cars, and 600 freight cars. The line from Kingston to Spanish Town was built in 1884, by a private company, and afterwards taken over by the Government. An extension to Porus was built in 1885 with a branch line from Spanish Town to Ewarton. A United States syndicate bought the then existing railways in 1889, and built extensions from Porus to Montego Bay, and from Bog Walk to Port Antonio, but the Government took possession in 1900. A branch to Chapelton was completed in 1913, and a branch to new works in 1921.

Canadian National Railways' Negotiations for Montreal Right of Way.

Negotiations have been in progress for some time between the Canadian National Ry. and the Montreal Tramways Co., for the acquirement of a portion of the Montreal Terminal Ry. right of way, but no sale has been effected. A press report states that the property consists of a strip of land 45 ft. wide and 15 miles long, paralleling the C.N.R. track from La Salle Ave., through Maisonneuve to Bout de l'Isle. The Montreal Tramways Co.'s local and suburban lines map shows its Terminal line extending from La Salle Ave., through Maisonneuve, Montreal East, Pointe aux Trembles and Laval de Montreal, to the end of Montreal Island at Bout de l'Isle. It is a single track line with switches at Marien Ave. and 5th Ave., Pointe aux Trembles; Rifle Range branch, Chapel branch, and Cemetery branch, Laval de Montreal.

St. Regis Pulp & Paper Co. is considering the question of locating a plant at Cap Rouge on the St. Lawrence River, about 7 miles above Quebec, and has obtained options on a lot of property on the waterfront on the north shore, near the former Canadian Northern Ry. line. The Canadian National Ry. have about 100 acres on the waterfront there.

Timiskaming & Northern Ontario Ry. Earnings.—We are officially advised that the T. & N. O. R. Commission has paid the Ontario Government \$750,000 out of the railway's net earnings for the fiscal year ended Oct. 31. This exceeds by \$38,000 the net earnings for the year ended Oct. 31, 1922, which was the record year up to that time.

Railway Lands Patented.—Letters patent were issued during October for Dominion railway lands in Manitoba, Saskatchewan, Alberta, British Columbia and Yukon, as follows: Canadian Northern Ry., 3,328.91 acres; Canadian Northern Western Ry., 7.72; C.P.R., 2,048.7.

Hotel Scribe Purchase for Canadian National Railways.

Major Graham A. Bell, Deputy Minister of Railways and Canals, was credited in a press report with having stated at Ottawa recently that there was no hitch in the purchase of the Hotel Scribe in Paris, France, by the Canadian National Rys., and that the deal had been concluded and possession taken. Another Ottawa press dispatch of Nov. 2 stated that while the purchase of the hotel as headquarters for the C.N.R. on the European continent was going through, the personnel of the purchasing syndicate was being changed, and that some who figured in the original transaction had been eliminated. It was also stated that the purchase price is higher than was first rumored, and will be between \$4,000,000 and \$5,000,000.

A writer in *Le Temps* in Paris, said recently, that under Arnold Aronovici, the C.N.R. representative in France and on the European continent, the Hotel Scribe will be changed into a real palace destined to give prominence to Canadian life. The building when luxuriously transformed will provide a home for the C.N.R. offices, to which all will go who are interested in the development of economic relations between France and Canada. The *Temps* writer continues:—"It will also offer to the great public of Paris a permanent opportunity for becoming better acquainted and for appreciating still more that magnificent country to which we are united by affinities of race. A cinema installed in the basement, where Lumier Brothers not long ago showed on the screen their first moving pictures, will exhibit to the spectators the life and customs, the landscape and the scenery of Canada, its agriculture and its industry in full operation, the physiognomy of its statesmen and of its people. A general exhibition and local exhibitions from the provinces will describe to visitors all the natural and manufactured resources of that immense territory where the name of France is so universally honored. A banquet hall and spacious parlors will complete this comfortable and splendid installation, which will very soon be a lobby alive with activity where will be nourished every movement capable of fertilizing and strengthening between the two countries an ancient and already powerful friendship."

A London press dispatch of Nov. 13 said that Hon. G. P. Graham, Minister of Railways and Canals, and the legal members of the Canadian delegation to the Imperial Conference, were in Paris looking into the hotel purchase, the value of the site, building, etc., and that the building was still vacant and plastered with signboards.

Esquimalt and Nanaimo Ry. Lands office.—It having been announced that the E. & N. R. lands office would be removed from Victoria, B.C., to Vancouver, the Victoria Chamber of Commerce telegraphed E. W. Beatty, President, C.P.R., recently, who replied that the matter arose through the retirement of the Land Agent, L. H. Solly, under superannuation regulations, and added:—"We will maintain an office in Victoria for the proper conduct of matters pertaining to our land interests there, giving all facilities to the public, and, while business does not warrant a continuance of all the expense formerly incurred there, it is not likely to involve more than two or three positions at the most."

D. B. Hanna's Western Trip.

D. B. Hanna, ex-President, Canadian National Rys., returned to Toronto, Nov. 6, accompanied by A. J. Mitchell, ex-Vice President, after nearly a month's absence, during which they went through to the Pacific coast, on business connected with several companies of which they are directors. They conferred with Andrew Kelly, President, Western Canada Flour Mills Co., at Winnipeg, visited one of its plants at Calgary, and conferred at Victoria with officials of its subsidiary, the Brackman-Kerr Milling Co. At New Westminster they inspected the plant of the Canada Western Lumber Co., of which Mr. Hanna is President, and discussed the situation there with Vice President J. D. McCormick. At Victoria, they conferred with Wm. Schupp, President, Consolidated Whaling Co., which operates 6 stations, 4 in Canada, and 2 in the United States, and inspected 2 of its plants, also visiting its offices in Victoria, Tacoma and Seattle.

On returning to Toronto, Mr. Hanna, in response to a request, said: "Generally speaking, I found business in a healthy condition, and the outlook for the immediate present is satisfactory. As an old timer in Western Canada, I cannot help thinking that much of the pessimism permeating the farming community is more imaginary than real. Of course, there are hardships among a certain class of farmers, who depend entirely on grain and therefore work less than 4 months out of the 12, and unless they get a crop at a decent price, they are bound to suffer, but the man who is a real farmer, and has diversified interests, and works like the rest of us, all the year round, while not making a great deal of money, is at least paying his way and more, and is a real representative of those who are doing their share in developing the western provinces."

Telegraph and Cable Matters.

F. P. State, former Telephone Inspector, Atlantic Region, Canadian National Telegraphs, died at Montreal recently, after a brief illness.

The Dominion Government cable steamship *Syrian* returned to Halifax, N.S., recently from a month's cable repairing trip, having visited St. Paul's Island, the Magdalen Islands, Pictou Island, Byron Island, and the Saguenay River.

The cable repair steamship *Restorer* is reported to have completed work on the Pacific cable near Midway Island, and to have gone to Honolulu, to do some work prior to returning to Victoria, B.C.

C. E. Davies, General Traffic Superintendent, and E. Kenward, Superintendent of Railway Service, Canadian National Telegraphs, attended the American Railway Association, Telegraph and Telephone Section, annual meeting, at Colorado Springs, recently.

Mrs. C. Matthews, manager and operator, Canadian National Telegraphs' up-town office at Warton, Ont., has celebrated her 50th year in the service, the office having been established in 1873 in her home, she being the first operator, and having held the position continuously since.

Thos. O'Donohue, son of C. O'Donohue, retired Superintendent of the Western Union Cable station, Canso, N.S., David Peters, and M. de Barres, all members of the cable operating staff there, were in an automobile accident near Antigonish, N.S., recently, the two first named being killed.

Among the questions considered at the Imperial Conference in London, Eng., recently was that of laying an all-British cable from Canada to the West Indies. The present cable from Halifax, N.S., to the West Indies is owned by the West Indies and Panama Cable Co., which is subsidized by the Imperial, Canadian and West Indian Islands Governments.

G. C. Jones, General Manager, Canadian National Rys. Telegraph and Telephone Department, has been making a general inspection trip of western lines, accompanied by C. E. Davies, General Traffic Superintendent; W. G. Barber, General Commercial Superintendent, and the superintendents of railway telegraph service.

Tenders will be asked shortly, a press report states, for laying a new cable from Turks Island to Barbados, where it will bifurcate to Trinidad on the one hand and to British Guiana, on the other. The new cable will connect with the Halifax-Bermuda cable line, and there will be wireless telegraph stations on the smaller islands, linked up with the cable station at Barbados.

The Marconi Wireless Telegraph Co. of Canada's report for the calendar year 1922, shows operating profits of \$22,251, against \$12,253 for 1921. The deductions were \$271,779, leaving a deficit of \$249,528, which has reduced the amount at the credit of profit and loss to \$7,484. The net working capital has been reduced from \$399,942 to \$228,258. The general balance shows total assets of \$6,841,044, of which \$6,142,669 represent the plant.

The Dominion Government's wireless telegraph stations at Dawson and Mayo, Yukon, were opened for service Oct. 22. For the present the Government telegraph system forms the connecting link between these stations and Edmonton, Alta. It is expected that next year wireless telegraph stations will be established at Fort Simpson, on the Mackenzie River, and Fort McMurray, Alta., and that in 1925 stations will be established at Fort Smith, Fort Norman and Akralavik.

Canadian National Telegraphs messengers in Toronto appeared on Nov. 7 in uniforms consisting of grey serge cap, tunic and breeches, and black leather leggings. The tunic fastens close up around the neck, and two rows of black braid encircle the cuffs of the sleeves. The company's crest is embroidered on the left arm, and also appears on the cap, with the words "Canadian National Telegraphs." About 500 messenger boys, in the principal cities, are to be uniformed similarly.

Canadian National Telegraphs have opened offices at Crabtree, or Crabtree Mills, and St. Joseph d'Alma, Que.; Blenheim, Crerar, Keemle Point and Whitby Jct., Ont.; Lavina, Muir and White Plains, Man.; Bayard and Chandler, Sask.; Lyalta, Alta. The following offices have been closed: Cape Despair and Newport (Gaspe County), Que.; Clarence Creek, Hammond, James Bay, Keemle Pit, Rock Lake and Whitby, Ont.; St. Norbert, Man. The names of the following offices have been changed: Callender, Ont., to Derland; Nakina Camp, Ont., to Nakina; Otter Lake, Ont., to Holmur.

Major J. E. Gobeil, M.C., heretofore Assistant to General Superintendent, Dominion Government Telegraph Service, who has been appointed by the Civil Service Commission as General Superintendent, Dominion Government Telegraph Service, a Public Works Department branch, with office at Ottawa, vice D. H. Keeley, who has retired, was born at St. Jean Ile d'Orleans, Que., Feb. 20,

1870, educated at Ottawa College, and entered the civil service Nov. 20, 1891, as secretary to the Chief Engineer, Public Works Department. In 1896 he passed the civil service qualifying examinations and three years later was transferred to the Government Telegraph Service. From 1899 to 1904 he was engaged in the construction of the Yukon telegraphs. His next appointment was as inspector of Yukon telegraphs, which he filled from 1905 until appointed Technical Assistant to the General Superintendent in 1908. In Dec., 1914, he enlisted for overseas service, served in France with the First Canadian Division, and was awarded the Military Cross and the French Croix de Guerre with star and with palm. On being demobilized, Nov. 1, 1919, he returned to his former position in the Government Telegraph Service.

Among the Express Companies.

G. C. Taylor, President, American Ex. Co., and of the American Railway Ex. Co., died at his home, Pelham, N.Y., Nov. 18, aged 54.

The Board of Railway Commissioners has decided, in connection with an application made by Saskatchewan Creamery Co., of Moose Jaw, and Saskatchewan Co-operative Creameries of Regina, that express commodity rates on cream are not applicable to homogenized cream. The order is given in full on an earlier page of this issue, under "Traffic Orders by Board of Railway Commissioners."

The Board of Railway Commissioners announced early in November that it would open its sittings at Edmonton, Alta., Nov. 26 to hear objections against the Express Traffic Association of Canada's application for a general increase of rates. The other sittings in the west were arranged as follows: Victoria, B.C., Nov. 29; Vancouver, B.C., Nov. 30; Nelson, B.C., Dec. 3; Calgary, Alta., Dec. 6; Saskatoon, Sask., Dec. 7; Regina, Sask., Dec. 8; Winnipeg, Man., Dec. 10.

Canadian National Railways, Express Department.

The C.N.R. Express Department shipped from Sudbury, Ont., to New York, two tons of fur skins, valued at \$50,000.

E. Collins, heretofore General Clerk, Brockville, Ont., has been appointed Agent there, vice A. J. Courtice, deceased.

S. L. Pratt, heretofore cashier at Brantford, Ont., has been appointed acting Agent there, vice J. I. M. Grant, resigned.

R. C. Mellish, heretofore Travelling Agent, Stratford, Ont., has been appointed Travelling Agent at London, succeeding B. S. Murray, retired.

E. G. Coulthurst, heretofore Cashier, North Bay, Ont., has been appointed Agent there, vice G. J. Goldthorpe, appointed Travelling Agent there.

G. J. Goldthorpe, heretofore Agent, North Bay, Ont., has been appointed Travelling Agent there, vice B. W. Bailey, transferred to Stratford, Ont.

B. W. Bailey, heretofore Travelling Agent, North Bay, Ont., has been appointed Travelling Agent at Stratford, Ont., to succeed R. C. Mellish, transferred to London, Ont.

W. G. Everett, heretofore Travelling Agent, St. John, N.B., has been appointed Agent there, succeeding H. C. Creighton, General Agent, who has been pensioned, after many years service in various

capacities. The position of Travelling Agent there has been abolished.

The following offices have been closed: Grand View and Hawkshaw, N.B.; Boucherville and Crabtree, Que.; Electric, Ont. The express service has been withdrawn from Iberville and Menardville, Que., the Canadian National Rys. having abandoned the line between Farnham and St. Johns, Que., 13.5 miles.

H. C. Creighton, General Agent, St. John, N.B., has retired after 47 years in express service in the maritime provinces. He entered it Dec. 27, 1876, with the Intercolonial Ex. Co., at Halifax, N.S., serving as clerk until April 30, 1878, since when his record has been: acting Agent, Halifax, same company, May 1, 1878, to March 31, 1879; Agent, Halifax, same company, April 1, 1879, to May 31, 1889; Agent, Halifax, Canadian Ex. Co., June 1 to Dec. 31, 1889; Assistant Superintendent, St. John, N.B., same company, Jan. 1, 1890, to April 30, 1898; Superintendent, St. John, same company, May 1, 1898, to Aug. 31, 1921; Claims Agent, Canadian National Ex. Co., Eastern District, St. John, Sept. 1, 1921, until recently, when he was appointed General Agent, St. John.

Dominion Express Company.

A delivery service and free pick-up service have been established at Grimsby, Ont.

The following temporary offices have been opened: Amazon, Crichton, Fortune, Gibbs and Wolfe, Sask.

The Dominion Ex. Co. is reported to have shipped, via Montreal, about 100 live foxes from a fox farm at Bodfish, Me., to Victoriaville, Cal. The shipment was carried in an all steel car, and passed through Montreal Nov. 17.

A parcel containing \$1,000 in silver, consigned to a bank in Rosetown, Sask., was stolen from the company's office in Saskatoon, Sask., Oct. 26. L. P. Valcouth, who went to the office as night operator, Oct. 25, signed for the parcel, and disappeared Oct. 27. The way bill and other papers relating to this parcel were removed from the files.

Frederick Stevens, who died at Winnipeg, Nov. 23, had been in the Dominion Ex. Co.'s service for over 40 years, having entered it at Winnipeg, Nov. 1, 1882, and having written the company's first waybill there. He occupied a number of responsible positions, both at Winnipeg and Vancouver, and during later years was on Superintendent W. M. Gordon's staff at Winnipeg. On the completion of 40 years of service, a year ago, he was the recipient of handsome presents. Among the pall bearers were G. Ford, General Superintendent, Western Lines; W. M. Gordon, Superintendent, Western Division; and C. N. Spooner, Route Agent. The General Superintendent, Superintendent and Assistant Superintendent's staffs attended in a body.

Express Rate Increase Application Hearings.

Hearings on the Express Traffic Association of Canada's application for an increase in rates were commenced by the Board of Railway Commissioners in Edmonton, Alta., on Nov. 26, and further hearings will be held at other important points, the Board's intention being to work east from Edmonton. It is stated that at the hearings in western Canada various boards of trade will oppose the application, and also the provincial governments, and it is said that the Cana-

dian Council of Agriculture will not only oppose the granting of an increase, but will press for a reduction in the present rates. The prospects are that in eastern Canada also the application will be opposed, by the Canadian Manufacturers' Association, boards of trade and other bodies.

The City of Sault Ste. Marie applied to the Board for an adjustment of express rates which would afford that place the same advantage as concerns express charges as were accorded it as concerns freight rates when it was placed in schedule A. territory, by the Board's judgment and order of June 30, 1922. The Secretary of the S. S. M. Board of Trade is reported to have received a communication from C. N. Ham, Chairman, Express Traffic Association of Canada, pointing out that if the Board of Railway Commissioners should decide that the express rates are to be based on the first class freight rates, as has been suggested, the express rates into and out of Sault Ste. Marie would be adjusted automatically.

Details of the hearing at Ottawa, on Oct. 4, at which the Dominion Express Co. and the Canadian National Rys. Express Department presented figures showing that present rates are insufficient, and the alternative methods proposed for ensuring the companies adequate revenues, were given in Canadian Railway and Marine World for November. It is expected that after the hearings throughout the country have been completed, a final hearing, at which argument will be presented, will be held at Ottawa.

DEPARTMENT OF RAILWAYS AND CANALS, CANADA, WELLAND SHIP CANAL.

Section 8.

NOTICE TO CONTRACTORS.

SEALED TENDERS addressed to the undersigned and marked "Tender for Section 8, Welland Ship Canal," will be received at this office until 12 o'clock noon, on Thursday, December 27th, 1923.

Plans, specifications and form of contract to be entered into can be seen on or after this date at the office of the Chief Engineer of the Department of Railways and Canals, Ottawa, and at the office of the Engineer in Charge, Welland Ship Canal, St. Catharines, Ont.

Copies of plans and specifications may be obtained from the Department on the payment of the sum of fifty dollars. To bona fide tenderers this amount will be refunded upon the return of the above in good condition.

An accepted bank cheque on a chartered bank of Canada for the sum of \$550,000.00 made payable to the order of the Minister of Railways and Canals, or War Loan Bonds of the Dominion of Canada to the same amount or War Loan Bonds and cheques if required to make up the difference, must accompany each tender, which sum will be forfeited if the party tendering declines entering into contract for the work at the rates stated in the offer submitted.

The cheque or bonds thus sent in will be returned to the respective contractors whose tenders are not accepted.

The cheque or bonds of the successful tenderer will be held as security or part security for the due fulfilment of the contract to be entered into.

The lowest or any tender not necessarily accepted.

By order,

J. W. PUGSLEY,
Secretary.

Department of Railways and Canals,
Ottawa, November 29th, 1923.

Electric Railway Department

Electric Railway Statistics for Calendar Year 1922.

The table on the following page was compiled in Canadian Railway and Marine World's office from statistics furnished by the Dominion Bureau of Statistics, Transportation Branch. The following abbreviations are used in the names of railways: E., electric; E.R., electric railway; E.S.R., electric street railway; S.R., street railway. The minus (—) mark in the column for net income or deficit shows that there was a deficit in the operation of the line to the extent of the figures given.

The mileages in the first column of figures are of the first main track, in addition to which the railways reporting had 513.22 miles of second track, and 255.96 miles of sidings and turnouts. In the line at the foot of the table giving comparative figures for 1921, the last eight columns cover the Toronto Ry.'s operations only up to the time it was taken over by the city, the figures for the 4 months' operation to Dec. 31, by the Toronto Transportation Commission not being received by the Bureau in time to be included.

The total length of first main track was 1,724.60 miles; of second track, 513.22; of sidings and turnouts, 255.96, making a total of 2,493.78 miles computed as single track, compared with 1,687.37 miles of 1st main track, 499.58 of 2nd main track, 238.79 of sidings and turnouts, and a total of 2,425.74 miles of all tracks at Dec. 31, 1921. The first main track mileage distribution by provinces is: Nova Scotia, 55.42; New Brunswick, 25.86; Quebec, 300.27; Ontario, 811.40; Manitoba, 127.01; Saskatchewan, 47.22; Alberta, 108.24; British Columbia, 249.18. Of this, 969.62 miles are owned and operated by private companies; the Montreal Tramways Co.'s 142.81 miles are owned and are operated by that company under the Montreal Tramways Commission's direction, under a special contract; the remaining 612.17 miles are under public ownership, as follows: The Canadian National Ry. owns and operates 136.28 miles; the Province of Ontario owns 23.01 miles, of which the Nipissing Central Ry. is operated by the Timiskaming & Northern Ontario Ry. Commission, and the Peterborough Radial Ry. is operated by the Hydro Electric Power Commission of Ontario, which also operates for the City of Toronto, the Toronto & York Radial Ry. and the Schomberg & Aurora Ry., 80.66 miles, and for the municipalities interested, the Guelph Radial Ry. and the Sandwich, Windsor & Amherstburg Ry., totalling 43.24 miles. The London Railway Commission operates the London & Port Stanley Ry., 24.50 miles, under lease from the City of London, and 13 municipalities own and operate directly 304.48 miles. The publicly-owned lines are located as follows: Ontario, 456.43 miles; Manitoba, 7.65; Saskatchewan, 38.22; Alberta, 106.49, and British Columbia, 3.38. The Calais St. Ry. in New Brunswick, and the Niagara Falls Park & River Ry. in Ontario, connect with lines in the United States, under the same ownerships.

The stock capitalization decreased from \$91,169,885 in 1921 to \$76,949,185, and the funded debt increased from \$86,017,551 to \$111,309,789, these differences being due, it is explained, to readjust-

ments made by the taking over of the Toronto Ry. by the city; but the price to be paid for the Toronto Ry. has not been settled, and further adjustments will have to be made. Of the 65 railways reporting, 14 failed to earn operating expenses, reporting a loss of \$116,887, while 51 showed an aggregate net operating revenue of \$13,790,501. After paying interest on funded and other debt and other deductions, 35 railways of the 51 had a corporate surplus of \$8,035,794, out of which to pay dividends and add to reserves. Dividends paid totalled \$2,-

The total number of employees was reported as 18,099, of whom 1,364 were engaged in general administration, 5,277 in maintenance, 11,373 in transportation and 85 not specifically distributed. The wages paid amounted to \$24,988,118.79.

London Street Railway Purchase Negotiations.

In connection with the negotiations which have been in progress for some time between Sir Adam Beck, acting for London, Ont., City Council, and the London Street Ry. Co., regarding the purchase by the city of the company's property, the Ontario Government was approached at the end of October with a view of having certain matters, which had arisen during the progress of the negotiations, straightened out. It is said that the principal point was in connection with the fare now being charged. Under the charter the fare is 5c, with tickets at reduced prices for adults, children and workmen, but an act passed in 1922 authorized the company, for the unexpired portion of its charter, to charge a straight 5c fare, tickets to be sold 5 for 25c, with children's fares as previously, cash 3c or 2 tickets for 5c, workmen's tickets being done away with. The city claimed that the present fares, which were put in operation June 14, 1922, are of an emergency character, and are not to be counted upon as an asset in fixing the price of the property. The parties were heard by the Premier and other members of the Government, Oct. 25 and 30, but no definite understanding was reached. It is claimed for the city that if the increase of fare had not been granted, the city could purchase the line at a much less price than that at which the company is now willing to sell. The city claims that the increased fare will not be effective after the expiration of the charter in March, 1925, while the company holds that the fares granted in 1922 will continue in force under any 5-year extension of the charter. The Government view apparently is that the increase of fares granted in 1922, will only run to the expiration of the charter in March, 1925, but it is said that the Legislature will be asked to give an interpretation of its intention.

The price at which the company is willing to sell its property is \$1,425,000, which Sir Adam Beck reported to London City Council, Nov. 5, as being excessive. The council, by a vote of 9 to 2, decided to take no action, consequently there will be no bylaw submitted to the ratepayers at the ensuing municipal election. The position now is that the council has until March, 1924, to decide whether it will give notice to take over the company's property under arbitration proceedings, or to endeavor to get some concessions for a 5 years' renewal of the franchise.

The Winnipeg Electric Ry. put its winter schedule in operation, Nov. 16. Practically every line is given an increased service, about 40 additional cars having been placed on the various routes in the city.

Canadian Electric Railway Association.

Honorary President: Major General Sir John M. Gibson, K.C.M.G., M.A., LL.B., LL.D., K.C., director, Dominion Power & Transmission Co.

Honorary Vice President: Acton Burrows, Proprietor, Canadian Railway and Marine World.

Honorary Advisory Council: Thos. Ahearn, President, Ottawa Electric Ry.; F. A. Gaby, Chief Engineer, Hydro Electric Power Commission of Ontario; Lt. Col. J. E. Hutcheson, General Manager, Montreal Tramways Co.; Geo. Kidd, President, British Columbia Electric Ry.

President: H. H. Couzers, General Manager, Toronto Transportation Commission.

Vice President: D. E. Blair, Superintendent of Rolling Stock, Montreal Tramways Co.

Treasurer: E. P. Coleman, General Manager, Dominion Power & Transmission Co.

Executive Committee: The President, the Vice President, the immediate Past President (Major F. D. Burpee, Manager and director, Ottawa Electric Ry.), the Treasurer, and G. Gordon Gale, Vice President and General Manager, Hull Electric Co.; W. S. Hart, Treasurer, Quebec Railway, Light, Heat & Power Co., and Vice President, Three Rivers Traction Co.; D. W. Houston, Superintendent, Regina Municipal Ry.; C. B. King, Manager, London Street Ry.; M. W. Kirkwood, General Manager, Grand River Ry. and Lake Erie & Northern Ry.; H. K. McLean, Superintendent of Transportation, New Brunswick Power Co.; A. W. McLimont, Vice President and General Manager, Winnipeg Electric Ry.; W. R. Robertson, General Superintendent of Railways, Hydro Electric Power Commission of Ontario; H. E. Weyman, Manager, Lewis County Ry.; C. L. Wilson, Superintendent, Hydro Electric Ry., Toronto & York District.

Auditor: Lt. Col. G. C. Royce.

Secretary: Eustace Smith, Jr., Executive Assistant, Toronto Transportation Commission, 35 Yonge St., Toronto.

Official Organ: Canadian Railway and Marine World, Toronto.

554,568, and additions to reserves aggregated \$4,664,822, while the railways as a whole showed a net surplus of \$89,557, whereas in 1921 there was a deficit of \$2,472,635.

During the year 47 persons were killed on street railways, against 48 in 1921, and persons injured increased from 2,385 in 1921 to 3,833, the largest increase being in passengers, viz., from 1,110 to 2,260.

The rolling stock and equipment owned consisted of 3,868 closed passenger cars, 258 open passenger cars, 103 combination passenger cars, 741 freight cars, 38 combination passenger and baggage cars, 20 work cars, 65 snow plows, 146 sweepers, 278 miscellaneous cars, and 56 locomotives. In addition, the railways owned 8 trackless trolley cars and 27 buses, this information being given for the first time.

Electric Railway Operating Statistics for Year Ended Dec. 31, 1922.

Name of Railway	1st main track mileage	Gross earnings from operation	Miscellaneous income	Operating expenses	Taxes funded debt, etc.	Net income or loss	Total car mileage	Fare passengers carried	Freight carried tons

Toronto Transportation Commission's Activities.

Rehabilitation of Toronto Suburban Ry. Lines.—Consequent on the sale, on Nov. 14, of the T.S.R.'s city lines to the City of Toronto, for operation by the Commission, the latter began their rehabilitation at once. Two shovels were put to work on Nov. 14 at 9 p.m., and on the following day work was under way at three points, westerly from Bathurst St. and Davenport Road, westerly from Keele and Dundas Sts., and easterly from Gilmour and Dundas Sts., and on Nov. 18 work was started on Keele St., north from Dundas St. The work contemplated for 1923 is as follows: Rehabilitation and double tracking, with 122-C-G construction, of the single track line on Dundas St. from the intersection of Dundas and Keele Sts. to the city limits at Runnymede Road; rehabilitation and double tracking, with 122-S-G construction, of single track line on Keele St. from Dundas St. to St. Clair Ave.; changing of gauge of standard gauge line on Weston Road from St. Clair Ave. to McCormack Ave., to the T.T.C.'s gauge, 4 ft. 10 $\frac{1}{2}$ in.; double tracking, with 122-C-G construction, of single track line on Weston Road from McCormack St. to city limits at Northland Ave.; double tracking, with 122-S-G construction, of single track line on Davenport Road from Bathurst St. to the north entrance of the Hillcrest repair shops, now being built; changing of gauge on Davenport Road line between north entrance to Hillcrest shops and Dovercourt Road, from standard to 4 ft. 10 $\frac{1}{2}$ in.; double tracking, with 122-C-G construction, of single track line on Davenport Road and Weston Road, between Dovercourt Road and St. Clair Ave.; construction of a loop at Weston Road and St. Clair Ave., and another at Runnymede Road and Dundas St. As stated above, this work has been mapped out for completion this year, but this will be contingent upon the continuance of favorable weather conditions.

On Nov. 16, the T.T.C. inaugurated a service from Keele and Dundas Sts., along Dundas St. to Gilmour St., on a temporary track. The Toronto Suburban Ry. provided a service on Dundas St. from Gilmour St. to Runnymede Road, on Keele St. and Weston Road, between Dundas St. and the city limits at Northlands Ave., and on Davenport Road, for a few days, after which all T.S.R. equipment was taken off the city lines. Following this, service was discontinued on Keele St. and Davenport Road, it being estimated that the Davenport Road service east of Dovercourt Road would be discontinued for about a week, and for about three weeks west of Dovercourt Road. The Keele St. service was discontinued for a few days only, on account of stone subgrade being used for the new track instead of concrete.

The Fairview section of the T.S.R. lines, a spur running south from Dundas St., will be abandoned by the Commission, and the people who have been served heretofore by this line will be served by buses. A map, accompanying an article elsewhere in this issue, concerning the sale of the T.S.R. city lines to the city, shows the location of the lines being rehabilitated, regauged or abandoned as above noted.

Parliament St. Line Loop.—Construction of a loop at the north end of the newly built Parliament St. line, at the Prince Edward Viaduct, is delayed pending the city's approval of plans.

Gerrard St. Bridge.—The Commission has connected its lines across the bridge over the Don valley, on Gerrard St., which it is expected, at the time of writing (Nov. 16), will be opened for traffic about Nov. 25. Closing of this gap in the Gerrard St. line will probably result in some re-routing of the cars serving the east end of the city.

Winchester St. Line.—The Commission undertook the construction of the Parliament St. extension on the understanding that the Winchester St. line would be abandoned, which has caused considerable protest. At the time of writing (Nov. 16), no decision has been arrived at concerning final disposition of the line.

Track Extensions into York Township.—Details of proposed extensions into the portion of York Tp. northwest of Toronto city limits were given in previous issues of Canadian Railway and Marine World. At the time of writing (Nov. 16), committees of business men and others in the areas which would benefit from the construction of the proposed lines are engaged in a campaign to secure a vote favorable to the lines' construction when the matter is put to the voters on Jan. 1, 1924.

Hillcrest Repair Shops.—The large repair shops at Bathurst St. and Davenport Road, construction of which by the John V. Gray Construction Co. has been pro-

ceeding since last spring, are nearing completion, and installation of machinery and equipment has been begun. The expectation is that they will be in operation before the end of this year. It is also expected that the various auxiliary buildings, mentioned in Canadian Railway and Marine World for October, pg. 498, for which Sullivan & Fried, Toronto, are contractors, will also be ready for occupancy about the same time; and also the office building being built by Witchall & Son at the Russell car house property.

The Roncesvalles Car House, in the southwestern portion of the city, at the intersection of King St., Roncesvalles Ave., Queen St. and the Lake Shore Road, was officially opened for operation on Nov. 3. The car house office was occupied by the Commission's staff on Oct. 20. A complete description of car house and office building was given in Canadian Railway and Marine World for September, pg. 444.

Bus Operation.—The 4 gasoline motor buses ordered by the Commission from the Fifth Avenue Coach Co., through Packard Ontario Motor Co., Toronto, have been placed in operation on the Rosedale runs. The Commission continues to operate the other gasoline motor bus routes, and the trolley bus routes, specified in previous issues of Canadian Railway and Marine World.

The One-Man Car Question in Ottawa.

The Ottawa Railway Employees' Union executive committee wrote to local newspapers recently, stating that the union was opposed to the introduction of one-man cars there, whether wholly or in part. Major Burpee, Manager, Ottawa Electric Ry., replied, and his letter is of interest and importance to electric railway officials generally. He said:—"The committee's letter contains the query, 'Who is more competent to advise the public upon the question of the practicability and safety of the one-man cars than the street car employees themselves?' May I suggest, that the most competent judge is the management of the street railway. Is it reasonable to suppose that sane business men would undertake an investment of millions of dollars in this type of equipment if it was impracticable and unsafe? The latest information prepared by the American Electric Railway Association for the guidance of its members, the street railways of Canada and the United States, report 422 street railways using 8,948 one-man cars. The one-man car has been the subject of discussion at every street railway convention for years past. The most careful investigations have been conducted by the Association. The practicability and safety of the one-man car for light traffic is beyond question.

"The letter makes the statement that the responsibility for accidents rests upon the employees. What does the employee lose if he is responsible for an accident? At most, his job. The street railway must settle for all accidents. I recall an accident which occurred some years ago on the Britannia line, in which a large number of persons were injured. It was due entirely to the stupidity and disregard of rules of one motorman. The motorman lost his job. The company paid \$90,000 in settlement of claims. It is natural that labor should oppose the

institution of any labor-saving device, but if the most important function of a street railway is to provide employment, why not put three or four men on each car?

"It is not a difficult matter to cite isolated cases of accidents in various cities in which chance alone has implicated the one-man car. The statistics prepared by the American Association show proportionately less accidents from the operation of one-man cars than from those manned by two men. The reason for this is that the one-man car is designed to avoid accidents as far as human ingenuity can provide. The properly equipped one-man car is built to carry not more than 30 passengers. The steps and doors are interlocked with the motors, so that the steps must be up and the doors closed before the car can start. Neither can the doors be opened or the steps lowered until the car is at rest. This has practically eliminated boarding and alighting accidents, which last year amounted to 20% of our total accidents in Ottawa. The controller and brakes, the starting and stopping mechanisms, are arranged so that even should the motorman drop dead the power is thrown off, the emergency brakes are set, and the car stops instantly. The employee operating a one-man car is instructed to perform his duties as conductor only when the car is at rest. An emergency exit is provided at the rear end which can be opened by passengers, giving two exits in case of emergency.

"The one-man car is used only for light traffic. On a line where the average number of passengers per trip is not more than 10 or 12, is it not better to have two cars of this type giving a five-minute service than one car with two men giving a 10-minute service? The operating cost is almost the same, and the service is improved 100%. We do

not propose that one-man cars should be used on the Bank or Somerset lines, or on any line where the traffic is heavy. It is designed to save power, wages, and wear and tear on equipment and tracks where it can be usefully employed. The management of this system has been supplied with the fullest information on the subject from all over the continent, and has personally observed one-man car operation in many cities. We have no intention of depreciating our service by introducing cars into Ottawa that will slow up our time schedules, or cause accidents for which we have to pay. The economy in operation which would result would be a big factor in keeping down the rate of fare by helping to offset the operating loss from extensions that cannot for some years produce enough revenue to carry themselves.

"State railway commissions in the United States have generally endorsed this type of car for light traffic, and have authorized their use in many cases where city councils, influenced by the propaganda of labor agitators, have refused permission to employ them. This has been done only after a thorough investigation as to practicability and safety of operation. Why has the Toronto Transportation Commission not only continued their use in that city, but is purchasing more? Why has the Montreal Tramways Commission authorized the purchase of 25 cars of this type which are now under construction? Why are they being effectively employed in New York, Brooklyn, Chicago, Philadelphia, Boston, Washington, Los Angeles, Denver, Baltimore, Detroit, Grand Rapids, Newark, Rochester, Albany, Cleveland, Providence, Milwaukee, Vancouver, Halifax, St. John, Quebec, Regina, Calgary, and hundreds of other cities? Would the management of these street railways purchase and introduce one-man cars if they were impracticable and unsafe, or continue them in operation if they injured their business and caused excessive damage claims?

"The advantages to Ottawa of the one-man car are: an improved service on light traffic lines, and an important saving in operation which will materially help to continue the five-cent fare. We will agree that their introduction will be so gradual that the status or seniority of any employee will not be affected, and that those employed on them will receive a 10% increase in wage rates. We are prepared to leave the partial adoption of the one-man car in Ottawa to any recognized street railway expert that the street railway committee care to employ."

Detroit Municipal Ry.—A press dispatch gives the following figures for the year ended June 30:—Total operating revenue, \$20,196,163.25; operating expenditure, \$14,450,612.80; taxes, \$633,796.64; interest on funded debt, \$1,833,857.14; deductions for interest on notes payable, \$31,037.37; deductions for sinking fund on construction and purchase bond contract, \$2,381,293.46; gross expenditure of \$19,330,597.41; net revenue from operation, \$865,565.84, to which is added non-operating revenue, \$72,901.63, making a net income of \$938,467.47.

Quebec Ry., Light & Power Co. notified Quebec City Council recently that a number of stops on the city car routes had been eliminated to promote better efficiency in operation. The council is reported to have decided, Nov. 8, to notify the company it had no right to change stopping places of cars without the city's consent.

Toronto Suburban Railway Lines Bought by City.

Canadian Railway and Marine World has given in previous issues particulars of the negotiations which have been in progress for many months, for the acquisition by the City of Toronto, for operation by the Toronto Transportation Commission, of the Toronto Suburban Ry.'s city lines, and our October issue contained the terms of a draft agreement which, we stated, would be just about those on which these lines would be taken over. As stated in our November issue, Toronto city authorities objected strenuously to the clause providing for the construction of a subway on Weston Road, and York Township authorities, who proposed buying the section of the T.S.R. line on Dundas St. from the westerly city limits at Runnymede Road, to Lambton, 1.34 miles, and handing it over to the Toronto Transportation Commission for operation, found that they were unable to do so legally until the matter had been submitted to a vote of the people.

furnish what service can be given, limited on account of the rehabilitation being proceeded with, on the acquired lines.

A cheque for \$118,317.24, covering the purchase price, and one for approximately \$12,000, as consideration for the deletion of the subway clause in the final agreement, were issued by the Toronto Transportation Commission to the T.S.R. bondholders' trustees on Nov. 14. In accordance with the agreement by which the T.S.R. had been operating the T.S.R. city lines for the Transportation Commission, and by which the Commission assumed the deficits incidental to such operation as from Sept. 1, 1921, the Commission on Nov. 15 issued a cheque for \$70,000 to the Canadian National Ry. in part settlement of deficits accrued. The settlement of the balance of deficits incurred to Nov. 15 will be made later.

The accompanying sketch map of a portion of northwest Toronto shows the

Portion of Northwest Toronto, showing Toronto Suburban Ry. lines bought by the City, and connecting T.T.C. lines.

Negotiations carried on during the early part of November succeeded in removing these obstacles, however, and an agreement was arrived at and ratified on Nov. 14. The final agreement differs from that outlined in our October issue, chiefly in that the clause concerning the subway construction has been entirely deleted; and in that \$87,628.67, representing the value of the Dundas, Fairview, Keele St. and Davenport West sections, and \$51,671.33, representing the value of the Lambton and Davenport East sections, have been replaced by \$118,317.24, representing the value of the Dundas, Fairview, Keele St., Davenport West and Davenport East sections, the Lambton portion, extending 1.34 miles west from the city limit at Runnymede Road, along Dundas St., not having been included in the sale. The original arrangement concerning this Lambton section was that the city was to take it over with the other sections, and to be recompensed therefor by York Township. The probabilities are that the township will vote on the matter of acquiring this line on Jan. 1, and if the vote is favorable, it will be bought from the T.S.R. by direct purchase, after which the township will arrange with the Toronto Transportation Commission for its operation.

While the agreement as finally drafted contained the interim operating arrangement mentioned in our October issue, which specifies that such arrangement shall last for not longer than 6 months, indication are, at the time of writing (Nov. 17), that it will be in effect for a few days only, as the Toronto Transportation Commission will itself proceed to

location of the T.S.R. lines taken over by the city, and their relationship to connecting Toronto Transportation Commission lines (marked T.T.C.). The T.S.R. line which leaves the city limit at Northlands Ave. goes on to Weston and Woodbridge, while that leaving the limits at Runnymede Road goes on to Lambton and Guelph. As stated, however, only the lines within the city boundaries, as shown, were acquired.

The successful conclusion of the negotiations for the purchase of the T.S.R.'s city lines by the city, is an effectual answer to the arguments advanced by Mayor Maguire and his satellites, that the city lines could not be acquired unless the line from Toronto to Guelph was also bought.

Hydro Electric Ry. Matters.—Residents along the Hydro Electric Ry., Toronto & York District, Mimico Division line, presented a petition recently to the Hydro Electric Power Commission of Ontario, which operates the lines for the City of Toronto, asking for widening of the Toronto-Hamilton highway, which the line follows from Toronto to Port Credit, 8.37 miles, so that the line could be double tracked. Dr. Forbes Godfrey, Ontario Minister of Health, who represents the district, Premier Ferguson of Ontario, and Sir Adam Beck, Chairman, Hydro Electric Power Commission of Ontario, and minister without portfolio in the Ontario Government, held a conference on Nov. 17, when this request and other matters concerning the Hydro Electric Ry. were considered.

Ottawa Electric Railway Franchise Negotiations.

In connection with the negotiations which are in progress, on the initiative of the Ottawa City Council, relative to the Ottawa Electric Ry. Co.'s franchise, the council's street railway committee submitted to the company a series of 17 questions, which were drawn up by the committee in connection with the proposed solution of the problem submitted by the company, details of which were given in Canadian Railway and Marine World for October. In brief, the company's proposal is that a supplemental agreement be entered into, in which certain clauses of the existing agreement are amended, under which the company would make the extensions and improvements proposed in the Feustel report of 1922. The committee desired to have more specific particulars on certain matters. The company's reply made certain concessions, including the right to appeal to the Board of Railway Commissioners as to fares at the end of each 5-year period; and a promise that the number of one-man cars would not exceed 40% of the rolling stock. The company also stated that it would agree to the 5c fare being effective only as far as the present city limits west of Holland Ave.; that the question of fares in territory to be annexed to the city could be discussed at the end of the 1928 franchise renewal period, and that it would not agree to the council designating the streets on which one-man cars should be run. It asked for an exclusive franchise free from the competition of motor buses or other vehicles, until 1928, and stated that certain of the extensions mentioned in the Feustel report would have to be postponed for consideration in 1928. The committee held a lengthened meeting on Oct. 30, at which the company's replies were considered. The Mayor is reported to have said: "We thought we would get the provisions of the Feustel report, a 5c fare, and service, but now we know just how much we will get." The meeting was adjourned with a view of arranging an interview with the company's Manager, Major Burpee.

A further meeting between the street railway committee and Major Burpee took place Nov. 13, when it is reported that the company was willing to build all the extensions mentioned in the Feustel report, with three exceptions, but would submit those to arbitration at the times it was recommended they should be built. Some progress is reported to have been made on other points. The committee submitted a further series of questions, in regard to which, Major Burpee replied that the company adheres to its position that any extension of the franchise must be an exclusive one; that in order to assure the continuance of the 5c fare during the continuation of the franchise extension, that the most economical methods of construction must be followed, and that an efficient construction without concrete base is possible; the use of metal ties would cost \$5,000 a mile more than wood, but there would be a saving in excavation and depth of pavement. While the company would agree to arbitration to settle the price to be paid by the city for the property if it were decided to buy, it would not agree to an arbitration to settle service on somewhat similar lines to the Montreal Tramway Co.'s franchise; and it would not agree to accept all recommendations of boards of conciliation as to wages. This covers the main points raised in the questions. After further

consideration, the committee reported to the city council, Nov. 19, that it had proceeded with the negotiations as far as was possible and had concluded that no further concessions could be obtained from the company. The committee had therefore asked the company to submit for its consideration a draft memorandum of agreement embodying the changes to be made in the existing franchise agreement.

The Ottawa Allied Trades and Labor Council is reported to have passed a resolution expressing a desire for the continuance of the existing agreement between the city and the company, until its expiration, and that the city should then acquire the property under the franchise terms.

Windsor, Essex & Lake Shore Rapid Railway Collision.

Two Windsor, Essex & Lake Shore Rapid Ry. cars, moving in opposite directions at a fast rate, collided during a fog on the morning of Nov. 15. Orlando White, motorman of the southbound car, was killed, and 13 passengers were more or less seriously injured. The collision occurred near the Devonshire race track, about 3 miles outside the Windsor City limits. The cars are said to have been each proceeding at about 40 miles an hour, and telescoped one another for about 20 ft., the smoking compartments of each being demolished, and the front trucks lifted off the tracks. Earl McKeown, motorman of the north bound car, was arrested, pending investigation of, and the placing of responsibility for the accident. A charge of manslaughter was laid against him, Nov. 17, when he was remanded for 10 days, bail being fixed at \$10,000.

British Columbia Electric Railway Company's Enterprises.

The British Columbia Electric Ry. Co. has issued an attractive descriptive and illustrated booklet about its various plants on the B.C. mainland, and on Vancouver Island. It was compiled at the directors' request to inform those who have money invested in the company, upon the extent and class of the company's interests, in a way no financial report can do. In addition to sending a copy to each of its nearly 15,000 shareholders in Great Britain, the company is distributing 5,000 copies in British Columbia. In addition to its electric railways, which have 311.18 miles of single track on the mainland, and 65.40 on Vancouver Island, the company controls the Vancouver Power Co., the Vancouver Island Power Co., the Western Power Co. of Canada, the Vancouver Gas Co., and the Victoria Gas Co. The present capacity of the several power plants is 158,150 h.p., of which 29,500 h.p. is developed and utilized on Vancouver Island. Additions to the Western Power Co. plant are being made which will add considerably to the 158,150 h.p. at present developed and used in Vancouver, New Westminster and vicinity. The booklet contains 40 pages of descriptive matter and illustrations, and two maps, one showing in outline the portion of British Columbia in which the company operates, and the other showing its railways and power plants.

Montreal Tramways Co's Proposed Reorganization.

About two months ago, shareholders of the Montreal Tramways & Power Co., the holding company for the Montreal Tramways Co., and other public utilities companies, with which E. A. Robert and his associates are connected, appointed a committee to look into the several companies' affairs. It was stated, Nov. 17, that the committee had prepared its report, and that it will form a preliminary to a large plan of reorganization, details of which are being worked out. E. A. Roberts, President, is stated to have been in New York, Nov. 17, in connection with plans for financing the enterprise. It is stated that under the new plan a new holding company will be formed to take over the Montreal Tramways & Power Co., the Quebec, New England, Hydro Electric Corporation, the Canadian Light & Power Co., and also a new company to be formed to develop the Carillon water power. It is proposed to develop 40,000 h.p. there, and 20,000 h.p. on the Riviere du Loupe, Maskinonge county, which will be delivered to points in the New England States.

Hamilton and Dundas Street Railway Charter, etc.

It is stated that under the terms of the Hamilton and Dundas Street Railway Co.'s charter, a failure to operate cars for a continuous period of 60 days would bring about the forfeiture of the charter. The company ceased to operate between Hamilton and Dundas, Ont., at midnight, Sept. 5, notice to that effect having been given previously by the company to the Hamilton City Council and the Dundas Town Council. E. P. Coleman, General Manager, Dominion Power & Transmission Co., is reported to have said, Nov. 6, that the Hamilton and Dundas Street Ry. Co.'s affairs had been in the hands of its solicitors since Sept. 5. He could not say whether the company would go into liquidation or whether the Dominion Power & Transmission Co., which had been paying the deficits, would dispose of the property. One thing was certain, the Hamilton and Dundas St. Ry. would not be operated again by Dominion Power & Transmission Co.

Hamilton Street Railway Ticket Forgery.

In connection with an article about this matter which appeared in Canadian Railway and Marine World for November, on pg. 547, we are advised that the statement that "Hamilton Street Ry. has for some time past been the victim of forged tickets dropped into the fare boxes by passengers," is not correct, as the fact of the forgery was known for at least a month before the tickets reached Hamilton, and the company was able to seize the entire outfit before any issue had been made. It appears, however, that the men implicated had given out about 160 tickets to relatives and friends, and that a few of these were dropped into the fare boxes on the day the seizures were made. George Beckerson and W. A. Walton, who were arrested on the charge of forging the car tickets, pleaded guilty in Wentworth County Court, and were each sentenced to two years' imprisonment less one day.

Electric Railway Finance, Meetings, Etc.

British Columbia Electric Ry. and allied companies.—

	August, 1923	August, 1922
Gross	\$855,551	\$842,274
Expenses	627,050	616,540
Net	228,501	225,734

Calgary Municipal Ry.—A press report of Nov. 9, stated there was an operating deficit in October of \$1,402.34, compared with a surplus of \$2,621.76 for Oct. 1922. The number of passengers carried was 1,125,874, against 1,207,227 in Oct. 1922. The total revenue for the 10 months ended Oct. 31, is stated to have been \$687,049.35, and operating expenses \$700,135.94, leaving a deficit of \$13,086.59, against a revenue of \$724,821.18, expenditures of \$740,593.48, and a deficit of \$15,772.28 for the 10 months ended Oct. 31, 1922.

Cape Breton Electric Co.—

	Aug. 1923	Aug. 1922	12 mons. to Aug. 1923	12 mons. to Aug. 1922
Gross	\$56,753.66	\$49,640.28	\$685,064.29	\$641,663.80

Balance	2,190.68	7,095.47	17,864.99	*142.02
*Deficit.				

*Deficit.

Hamilton St. Ry.—The Hamilton, Ont., City Clerk is reported to have said, Nov. 19, that Hamilton St. Ry. receipts for the 3 months ended Sept. 30 were \$243,671.26, compared with \$245,990.25 for the corresponding months of 1922, and that the city will receive \$19,493.70 for percentage, and \$2,914.15 for mileage. This will make the total received by the city for the nine months \$70,756.

Montreal & Southern Counties Ry. Co.'s annual meeting was held in Montreal, Oct. 18. The following are the directors:—Sir Henry Thornton, President; S. J. Hungerford and Gerard Ruel, K.C., Vice Presidents; W. C. Chisholm, K.C., Solicitor; Major Graham A. Bell and E. R. Decary. The other officers are: W. B. Powell, General Manager; J. A. Yates, Treasurer; H. G. Forman, Assistant Treasurer; J. M. Rosevear, General Auditor; J. P. Hudson, Secretary. All the directors and officers, except Messrs. Powell and Hudson, are also either directors or officers, Canadian National Rys.

Montreal Tramways Co.—A dividend of \$2.50 a share for the quarter ended Sept. 30, was declared payable Nov. 2, to shareholders of record Oct. 22.

The Quebec Power Co. is reported to have sold an issue of £300,000 of 6% 20-year first mortgage bonds in London, Eng., at 95, being the balance of an issue of \$5,000,000, the remainder of which was sold in Canada and the U.S. The Q. P. Co. owns the Quebec Ry., Light & Power Co., the transfer of which is in process of consummation.

Winnipeg Electric Ry.—

	Sept. 1923	Sept. 1922	9 mons. to Sept. 30, 1923	9 mons. to Sept. 30, 1922
Gross	\$407,598	\$426,363	\$3,923,202	\$3,977,034
Expenses	277,596	293,454	2,749,237	2,924,615
Net	130,002	132,909	1,173,965	1,052,459
Fixed charges	72,980	75,816	672,915	575,535
Surplus	57,022	57,092	501,050	476,833

The net results for the month are a net divisible income of \$57,022.25, compared with \$57,092.31 for Sept. 1922. The gross earnings of the three utilities combined decreased \$18,764.96, or 4.4%, due to a decrease in the receipts of both railway and gas utilities. This was due to a decrease in the number of passengers carried daily, on account of favorable weather conditions for operating automobiles and the public walking, and a temporary general depression in business

conditions that prevails throughout every line of business in the city. The gas utility's gross earnings decreased \$11,150.53, or 15.3%, also due to prevailing local conditions. The electric utility's gross receipts increased \$8,507.76, approximately 10%. This increase is considerably below what it would have been under normal conditions. Practically every large power consumer's account decreased in the amount of power consumed, and had these accounts been on a comparative basis with the previous year, the increase due to an increase in the power accounts alone would have been more than twice what it actually was. The total operating expenses of the three utilities decreased \$15,585.54, or 5.4%. The decrease in operating expenses of both the railway and gas utilities compares very favorably with the decrease in gross receipts. The increase in the electric utility operating expenses was due primarily to an increase in the cost of power on account of increased output.

Electric Railway Passenger Fares.

Brantford Municipal Ry.—We are officially advised that increased fares were put in force by the Brantford, Ont., Municipal Railway Commission on Oct. 16. The new fare of 6c cash or 10 tickets for 50c, replaces the old rate of 5c cash or 5 tickets for 25c. No change has been made in school children's and children's tickets, which are still sold 10 for 25c; but instead of being available for children up to 12 years of age, they are now limited for children up to 52 in. high. There are no other fares now in force on the line.

British Columbia Electric Ry.—North Vancouver District Municipal Council's special railway committee is reported to be drafting an agreement with the company respecting fares and other matters.

Ontario Hydro Electric Rys.—Residents of the territory served by the Hydro Electric Rys., Toronto & York District, Mimico Division line, have applied to the Hydro Electric Power Commission of Ontario, Railways Department, which operates the line for the City of Toronto, for extension of the 5c fare zone from stop 22 from Toronto, to stop 29, i.e., from mile 3.1 from Toronto to mile 4.78. At the time of writing (Nov. 20) no decision on the request had been announced. The people concerned claimed that they are entitled to this extension on account of the Toronto Transportation Commission having extended its line to the Humber River, thus cutting down the Mimico Division car runs at the east end.

Suburban Rapid Transit Co.—An investigation is reported to have been initiated under the Manitoba Public Utilities Act, as amended, into the rates and tolls to be imposed and the nature of the service to be furnished by the Suburban Transit Co., a Winnipeg Electric Ry. subsidiary, in the Assiniboia, St. James and Charleswood municipalities, and the town of Tuxedo. It is stated that the object of the investigation is to try and establish a uniform zone rate in these municipalities and Winnipeg, and it is claimed that the zone rate for Winnipeg is 3c, while for the municipalities named it is 4c.

Publicly Owned Utilities and the Industrial Disputes Investigation Act.

As stated in Canadian Railway and Marine World for October, in an article dealing with the wage dispute between the Toronto Hydro Electric Commission and its employees, Mr. Justice Orde issued an interlocutory judgment, on Aug. 29, which prevented the board of conciliation and investigation, appointed by the Dominion Labor Department, from functioning. As also stated, the Labor Department gave notice of appeal. The members of the board were ex-Judge Snider, of Hamilton, chairman; F. H. McGuigan, appointed by the Minister of Labor to represent the Commission, and J. G. O'Donoghue, representing the employees. Justice Orde's decision was on an application by G. H. Kilmer, K.C., for the Commission, for an injunction to restrain the board from acting, on the ground that the Industrial Disputes Investigation Act does not apply to a publicly-owned utility. The decision not only denied the board power to act, but cast considerable doubt on the constitutionality of the act in its entirety.

Action on the Labor Department's appeal started on Nov. 19, at the assizes in Toronto before Mr. Justice Mowat. G. H. Kilmer, K.C., and J. R. Robinson appeared for the Toronto Hydro Electric Commission; Lewis Duncan for the defendants (the members of the board of conciliation and investigation having been named as such in the previous action); H. H. Dewart, K.C., for the Labor Department, and E. Bayly, K.C., Deputy Attorney-General, for the Ontario Government. Justice Mowat is reported to have stated that the act is one that has proved very valuable and that it would be unfortunate if it were to be found to be ultra vires. He suggested that perhaps the Ontario Government might pass legislation which would remove doubt as to its constitutionality. Mr. Kilmer said that the Commission was willing to let the matter stand and wait to see what action provincial legislatures might take, but Mr. Dewart insisted on obtaining a clean-cut decision from the court, as he considered it would take too long for nine provinces to pass legislation which would definitely remove doubts as to the act being intra vires. The action therefore proceeded, Justice Mowat being reported as saying, "I suppose I will have to try the case and start it on its long career to England."

The Minister of Labor, Mr. Murdock, and Jas. Gunn, of the electrical employees' union, were examined on Nov. 19 and 20. Mr. Murdock stated he would not have granted the board, in view of there being a publicly-owned utility concerned, if it had not been for dangerous labor troubles in other parts of the country. H. H. Couzens, the Commission's General Manager, testified, on Nov. 21, that the men were unlikely to strike at any time. He said that if the board was legally entitled to act, he had no objection to its doing so, but thought that its legality should be definitely determined before it took any action. Argument was set for Nov. 29.

Montreal Tramways Co. has bought from the Detroit, Mich., City Railway, 14 Birney safety one-man cars, which have been operated only for a short time. They will be used on short outlying stub lines in Montreal, where the traffic is very light.

Electric Railway Projects, Construction, Betterments, Etc.

British Columbia Electric Ry.—At the time of writing (Nov. 12), it is expected that the new station for the Lulu Island line, at Davie and Seymour Streets, will be in operation by the end of November. With the completion of the station, and some changes in the tracks, the traffic from the interurban line to Marpole and Kerrisdale, branching out on Lulu Island, will be diverted over Granville St. bridge to Seymour St., as far as Davie St. (Nov., pg. 548.)

Calgary Municipal Ry.—R. A. Brown, Superintendent, is reported to have stated that \$70,000 had been expended during 1923 on betterments; that plans for betterments for 1924 are being made, and that it is expected provision will be made for the expenditure of about \$70,000. (Nov., pg. 548.)

Fort William Municipal Ry.—The Board of Railway Commissioners has authorized Fort William, Ont., City Council to electrify the Canadian National Ry. track on James St., Fort William, Ont., between Frederica and Montreal streets, to connect its street railway tracks with the C.N.R. at Frederica and at Montreal streets, and to operate over the same.

Hamilton Radial Ry.—The Burlington Beach Commissioners and Dominion Power & Transmission Co. officials met recently to discuss the question of the Hamilton Radial Ry. tracks along the Beaches. It is stated that the raising of the levels on the highway by the Ontario Government has brought about an unsatisfactory state of affairs, and the company claims it should not be forced to pay the entire cost of raising the tracks up to the new level. No decision was reached as to what is to be done, but it is thought that the residents will appeal to the Board of Railway Commissioners for an order directing the tracks to be raised.

Kingston, Portsmouth & Cataraqui Electric Ry.—A press report states that the Kingston city board of works has approved of the company's plans to extend its tracks for 125 ft. on King St. (May, pg. 238.)

Montreal Tramways Co.—In connection with the company's application to the Board of Railway Commissioners in June for permission to extend the Atwater Ave. line across the Canadian National Ry., the Board suggested that the line crossing the C.N.R. at Guy St. be abandoned in favor of the projected extension of the Atwater Ave. line. The city council's executive committee recommended, in a recent report, that this plan be agreed to, on condition that the Guy St. line be not abandoned until the Atwater Ave. line has been built. A protest against this has been sent to the council by residents in the region served by the Guy St. line. Further consideration is being given to the matter by the council.

Financial men closely associated with the company are reported to be preparing plans for the development of water-power on the Riviere du Loup, about 70 miles northeast of Montreal, to supply power for operation of the company's railway and for affiliated enterprises. (Oct., pg. 492.)

Montreal & Southern Counties Ry.—The additions to the station at McGill and Youville streets, Montreal, is reported to be practically completed, and it is expected to have the enlarged building fully open to the public early in

December. A description of it was given in Canadian Railway and Marine World for August, pg. 406.

Progress is also reported as being made with the erection of the railway's new office building at St. Lambert, Que., which it is expected will be completed early in January, 1924.

New Brunswick Power Co.—The relaying of the track on Main St., between Douglas Ave. and Portland St., St. John, has been completed, and traffic was reported to have been resumed on Nov. 5. (Nov., pg. 548.)

Ottawa Electric Ry.—The new track on Bank St., between Pretoria Ave. and Fifth Ave., has been completed and cars are being operated over it. The temporary tracks have been removed. (Nov., pg. 548.)

Ottawa Electric Ry.—We are officially advised that a substation is being built on Albert St., Ottawa, to contain one 2,000 k.v.a. Westinghouse rotary converter. It is also proposed to erect a garage on Queen St. for motor cars and trucks, containing linemen's quarters and office for Electrical Engineer, with store rooms, etc.

Quebec Ry., Light & Power Co.—We are officially advised that there is under construction about 1,500 ft. of line on 8th Ave., Limoilou, connecting 8th Ave. and 5th St. with 8th Ave. and 10th St.

The company has also under construction an extension of its St. Malo car house to cover 600 ft. of track. (Oct., pg. 492.)

Toronto Eastern Ry.—Tracklaying between Whitby and Pickering, Ont., in which 80 lb. steel was used, and which was begun Oct. 25, has been completed. Tenders were received to Nov. 26 for rebuilding 14 trestles between Pickering and Bowmanville, and this work will be started as soon as the contracts are awarded. The trestles are located as follows: 4.4, 2.8, 1.4 and 0.5 miles west of Whitby; 1.2 and 2.1 miles east of Whitby; at Oshawa; 1.6, 2.0, 2.4, 2.6, 3.5 and 5 miles east of Oshawa, and over Bowman Creek at Bowmanville. Some of the new trestles will be of pile construction and others will have framed bents, while a few will include both piles and framed bents. The contract forms call for the demolition of the present structures, which have depreciated so as to be unfit for use, and construction of the new ones. (Nov., pg. 548.)

Winnipeg Electric Ry.—A car service has been placed in operation on the extension of Notre Dame St. line, westerly to Midland St. A 6-minute service is given during the day, and a 4-minute service during the morning and evening rush hours. (Nov., pg. 548.)

Winnipeg Electric Ry.—The extension of the Academy St. line from Lindsay St. to Kenaston Boulevard, construction of which was started Sept. 25, was reported to have been opened for traffic Nov. 16. (Nov., pg. 548.)

The Suburban Rapid Transit Co., a Winnipeg Electric Ry. subsidiary, has applied to the Municipal Commission, under the provisions of the Manitoba Public Utilities Act, to order the substitution of a continuous 45-minute service to Charleswood, via the Academy Road route, in place of the present service, which is operated at hourly and half-hourly intervals at different periods of the day.

Mainly About Electric Railway People.

Jos. Alfred Cote, who has been appointed Superintendent, Montmorency Division, Quebec Ry., Light & Power Co., vice J. A. Everell, resigned, was born at Quebec, Que., Nov. 13, 1887, and entered transportation service March 20, 1903, since when his record has been, March 20, 1903, to Sept. 15, 1903, messenger boy; Sept. 15, 1903, to Oct. 10, 1910, clerk in audit office; Oct. 10, 1910, to Dec. 15, 1912, accountant and cashier; Dec. 15, 1912, to Aug. 28, 1923, also storekeeper, timekeeper and car accountant; Aug. 28, 1923, to Oct. 13, 1923, acting Superintendent, Montmorency Division; Oct. 31, 1923, Superintendent, Montmorency Division, all in Quebec Ry., Light & Power Co's service.

P. W. Ellis and **George Wright** were renominated by Toronto City Board of Control on Nov. 23, as members of the Toronto Transportation Commission, which operates the street railway, and Roy Miller, of Roger Miller & Sons, contractors, was nominated to fill the vacancy caused by the death of his brother, Fred. R. Miller. The city council, on Nov. 26, by a majority of three, referred the recommendation back to the board for further consideration.

Arthur Gaboury, formerly Superintendent, Montreal Tramways Co., has been appointed General Manager and Secretary, Province of Quebec Safety League.

A. W. McLimont, Vice President and General Manager, Winnipeg Electric Ry., Mrs. McLimont and Miss Betty McLimont, returned to Winnipeg at the end of October from a trip to eastern Canada.

M. C. O'Donnell, who has, for some years, acted as Consulting Electrical Engineer for the Ottawa Electric Ry., has been appointed to that position, and will give his entire time to the company's electrical matters.

T. H. Purdon, K.C., who died in London, Ont., Nov. 14, aged 70, was director of a number of companies with headquarters there. He was one of the directors of the Southwestern Traction Co., which built an electric railway from London to Port Stanley, which reorganized as the London & Lake Erie Ry. & Transportation Co., and went out of business after the London & Port Stanley Ry. was electrified.

Lieut.-Col. G. C. Royce was presented recently with a morris chair by W. Wilkes, the oldest conductor, and R. Harris, the oldest motorman, on behalf of the Toronto Suburban Ry. employees, on retiring from the position of General Manager.

The Toronto Suburban Ry. has rented a portion of one of the Massey-Harris Co. factory buildings on Weston Road, at the northwest limit of Weston, Ont., for temporary use as a car house. The storage space secured will accommodate the cars operating on the T.S.R. Weston Division, which, owing to the Toronto Transportation Commission's rehabilitation work on the lines purchased recently by the City of Toronto from the T.S.R., are unable to have access to the T.S.R. Lambton or St. Clair Ave. (Toronto) car houses. This transaction gave rise to rumors that the Canadian National Ry. had bought the Massey-Harris Co's entire 40 acres property on Weston Road, but immediate denial was given the rumor by E. W. Oliver, Manager, T.S.R.

Electric Railway Notes.

The Quebec Power Co. is reported to have under consideration a plan for changing several of the street car routes in the city to improve the service.

Cape Breton Electric Co. has ordered 2 one-man safety cars from Utilities Equipment Co., New York, and 1 single truck snow sweeper from McGuire-Cummings Co., Chicago.

Calgary Municipal Ry. had a fare box stolen recently from one of its trailer cars, which had just been hauled into the yard. The box was discovered the next day near the Bow River, where it had been thrown by the thief, who had failed to open it.

The Winnipeg Electric Ry. has 56 cars equipped with electric heaters, 20 with hot water, and 245 with hot air. Approximately 1,800 tons of coal are required for the operation of the hot water and hot air equipped cars. Heating of cars costs the company approximately \$300 a day.

Edmonton, Alta., City Commissioners are reported to have called the Dominion Government's attention to the carrying on of coal mining operations under the city, which, it is claimed, is endangering the Edmonton Radial Ry. tracks on Jasper Ave. It is stated that the car tracks have sagged to such an extent that cars cannot pass each other.

The Quebec Railway, Light & Power Company has, a Quebec press dispatch states, decided to operate its Montmorency Division, from Quebec to St. Anne de Beaupre and St. Joachim, 28.60 miles, entirely by electricity, instead of partly by electricity and partly by steam, as heretofore. It is also said that the company is buying three electric locomotives.

London St. Ry. has lost its appeal to the county court judge against the raising of its assessment by the city assessors from \$5,000 a mile for straight tracks, and \$7,500 a mile for curves, to double these figures. The court of revision reduced the assessment to \$7,500 a mile for straight tracks and \$10,000 a mile for curved sections. The county judge confirmed this.

County Judge Macbeth heard, in London, Ont., on Nov. 6, appeals from the city court of revision on assessment matters, the most important being that of London St. Ry. Co. The company was formerly assessed at \$5,000 a mile for straight track, and \$7,500 a mile for curves. The assessors doubled these figures, and the court of revision cut the increase in half, leaving the assessment at \$7,500 a mile for straight track, and \$12,500 a mile for curves. Judgment was reserved.

The Montreal Tramways Co. has under consideration, in conjunction with the Montreal Tramways Commission, and the employees' union, a project for the provision of an employees' pension fund. The matter has been mentioned for some years past, but no definite action was taken towards carrying it into effect until this year. A comprehensive plan for pensions, sick benefits, etc., has been prepared, the funds to be provided by contributions from the company and the employees.

The Ottawa Electric Ry. Co. appealed to the court of revision against an assessment for 1924 of \$1,903,148 for business tax and on the poles, tracks, wires and car house machinery. The company was exempt from this under the 30-year

franchise, but the city claims that under the 5-year extension it has the right to levy the business tax. The company appealed on the ground that the agreement provides that in the event of a renewal, all its privileges are to be extended. The court decided in the company's favor, and it is said that the city will appeal to the county court judge.

The Brantford Municipal Railway Commission was sued in an Ontario court by the Utilities Equipment Co., New York, recently, to recover \$608 freight charges on 2 second hand, single truck street cars and equipment, shipped from Norwich, Conn., to Brantford, Ont. The Commission counterclaimed for \$510 on the ground that the motor equipment was not in good running order, as represented, and that some parts were not supplied. Judgment was given for the plaintiff for \$226 and costs with \$25 counsel's fee on the claim, and for the defendant for \$300 and costs with \$70 counsel's fee.

R. A. Brown, Superintendent, Calgary Municipal Ry., is reported to have said recently: "The use of automobiles is growing so rapidly that no one can possibly say what the next five years may bring forth. The problem is not Calgary's alone. The upshot may be that gasoline motor buses will eventually drive out electric street railways. On the other hand, the huge and growing consumption of gasoline may reach such a point eventually that it will force prices up to such an extent that automobile traffic will be curtailed. We are in a period of change, the result of which no one can forecast."

Electric Railway Employees' Wages, Etc.

British Columbia Electric Ry.—We are officially advised that the new agreement, putting into effect the conciliation board's recommendations, which had been mutually agreed to, has been signed by the company and the union's representatives. The agreement dates from Sept. 1, 1923, will continue for one year, and is binding on all employees referred to therein, except conductors, motormen and trainmen employed on the Lulu Island branch, and the Fraser Valley line. Motormen and conductors receive $3\frac{1}{2}$ c an hour increase over the schedule in force since Jan. 5, 1922, the new rates per hour being:—City and suburban lines: First 6 months, 52c; second 6 months, $56\frac{1}{2}$ c; third 6 months, $59\frac{1}{2}$ c; thereafter, 62c; one-man car operators, 68c; in work train service, 2c an hour in addition to above rates. Interurban lines: Passenger cars—First 6 months, 52c; second 6 months, $57\frac{1}{2}$ c; third 6 months, 61c; thereafter, 64c. Freight cars: First 6 months, 55c; second 6 months, 60c; third 6 months, 64c; thereafter, $66\frac{1}{2}$ c. Passenger brakemen: First 6 months, 52c; second 6 months, $55\frac{1}{2}$ c; third 6 months, $58\frac{1}{2}$ c; thereafter, 61c. Freight brakemen, 62c; trolleyman, 60c. Sunday work, time and a quarter; holiday work, time and a half. Extra men to be guaranteed a minimum monthly earning of \$87.50.

Calgary Municipal Ry.—The question of the apportionment of night work between the senior and junior employees, has been a source of contention for some two years. Some time ago the old strict

seniority rule was changed for a new plan, under which junior men worked 3 weeks on a night shift and one week on a day shift. The senior men now propose that another plan be tried for 6 months, under which the men will divide the night shifts on an equal basis, after which a vote will be taken on the merits of the three plans.

Dominion Power & Transmission Co.—A press report states that 26 of the junior employees at Hamilton, Ont., have been "let out," owing to the readjustment of the staffs of motormen and conductors, consequent upon the operation of the Hamilton and Dundas Street Ry. being discontinued. Except in a few instances, the men who have been let go have had less than 5 years' service.

Montreal Damage Suit Dismissed.

The Quebec Court of Appeal, sitting at Montreal, gave judgment, recently, allowing the Montreal Tramways Co.'s appeal against a Quebec Superior Court judgment, awarding H. H. Kavanagh, a student, \$6,779.25 damages for injuries sustained by a trolley pole falling on him, and reversed the judgment. Kavanagh, together with a number of other students, boarded a car at Notre Dame de Grace, and in the rush one of the boys seized the trolley rope and pulled the trolley down. This was adjusted, but after the car was restarted, the trolley was again pulled down, and fell among the boys, injuring Kavanagh severely. The Superior Court awarded him \$6,779.25 damages. Justice Rivard, in delivering the Court of Appeal's judgment, said the facts showed that Kavanagh was injured, not through any act or default of the company, but through the illegal act of one of a bond of students of which he was one. It was true that the trolley pole became separated from the rest of the mechanism and fell, but this was due to a derangement of the mechanism caused by the illegal act of an unknown student pulling at the rope. Article 6,054 of the Civil Code as to presumption of fault, did not apply, as it appeared that the company's employees did what was reasonable under the circumstances. Justice Guerin was the only one of the five judges who heard the case, who did not concur with the judgment.

Fort William and Port Arthur Electric Rys.—Through service of cars between Fort William and Port Arthur, Ont., was resumed Oct. 22, in accordance with the agreement reached by the Port Arthur Public Utilities Commission and the Fort William Public Utilities Committee, the service given being a 20 minutes schedule, the same as prior to the rupture on May 15. A Port Arthur press report of Nov. 5 said that the receipts of the Port Arthur Civic Ry. for the 10 days ended Oct. 31, were \$5,221.81, as compared with \$5,286.43 for the 10 days ended Oct. 22, when the cars ran only to the boundary between the two cities.

The Suburban Rapid Transit Co., Winnipeg has been authorized by the Manitoba Provincial Secretary, under the Public Utilities Act, to discontinue its electric car service across the Canadian National Rys. bridge at St. James, provided all transfer privileges accorded to passengers from points east and west of the intersection of St. James St. and Portage Ave., continue to be observed. The order was put into effect Nov. 25.

Marine Department

The World's Largest Drydock Opened at St. John, N.B.

Drydock Dimensions:—Length on keel blocks, 1,150 ft.; minimum entrance width, 125 ft.; draft on entrance sill, h.w.o.s.t., 42 ft.; inner docking chamber length, 500 ft.; outer docking chamber length, 650 ft.; minimum draft entrance wharves, l.w.o.s.t., 32 ft.

Drydock Equipment:—Ten 15-ton capacity electric capstans; one 15-ton travelling crane, useable at any point around dock; one 60-ton fixed derrick on fitting-out wharf; compressed air and electrical energy available at all points around dock; self-contained fire protection system; sewerage disposal system for

Construction Data:—Excavation for dock started Oct. 15, 1918. Excavation for dock completed July 31, 1921. Rock removed, 400,000 cu. yd. Concrete in dock started July 31, 1921; completed Sept. 22, 1923. Concrete placed, 100,000 cu. yd. Repair shops started June, 1922; completed Oct., 1923. Marine slipway started Sept. 1, 1923; completed Oct., 1923.

The Harbor Development and Drydock and Ship Repairing Plant.

The Dominion Government has had under construction in Courtenay Bay,

final adoption of the scheme of improvements that is now approaching completion.

Courtenay Bay.—The accompanying map of St. John harbor shows the present deep water wharves and accommodation in the main harbor, and the location of Courtenay Bay and its relation to St. John and the Canadian National Rys. Courtenay Bay is particularly well adapted to the further expansion in harbor and terminal facilities required by St. John. It has a considerable area, an advantage over the present main harbor, and it is free from objectionable cur-

The St. John Drydock & Shipbuilding Co.'s Drydock, Marine Railway, Fuel Tanks, Repair Shops and Offices at St. John, N.B.

docked ships; electrically operated unwatering pumps, capable of emptying dock in 4 hours; self-contained flood lighting system.

Power Plant:—Boiler capacity, normal rating, 2,000 h.p.; generator capacity, 2250 k.v.a.

Repair Plant:—Machine shop, plate shop, boiler shop, blacksmith shop, joiner shop and loft.

Marine Slipway:—Eighteen hundred tons deadweight capacity. Will accommodate ships up to 300 ft. long, and any draft aft up to 20 ft., with facilities for side slipping.

Direct rail connection from Canadian National Rys. main line to alongside drydock, marine slip and entrance berths.

Crude oil fuel station alongside entrance to dock.

St. John, N.B., for several years, a large and comprehensive scheme of harbor development, the object of which is to cope with the increasing demands of Canada's large export and import trade. In conjunction with these improvements, a drydock and ship repair plant have been built.

By reason of its location on the Atlantic coast, with the shortest rail haul to the interior, and the terminus of two large transcontinental railways, St. John is Canada's chief winter port, and, as regards volume of trade, is Canada's second ocean port. The facilities to take care of the trade, in St. John's main harbor, have been inadequate. During recent winters many ships have had to anchor awaiting berth space. These conditions led to the consideration of the advantages of Courtenay Bay and to the

rents that make navigation and berthing of vessels difficult. There is ample room for industrial, railway and terminal development at the head and on the east side of the bay. Easy access is afforded the Canadian National Rys., which have lines on both sides, one of which terminates at the drydock.

The Contracts.—The works were comprised in two contracts, known as the Harbor Works Contract and the Drydock Contract. These contracts were taken over in July, 1918, by the St. John Drydock & Shipbuilding Co., Ltd., which is incorporated under the Dominion Companies Act, most of the principals in which have been engaged for some years in harbor developments on the Great Lakes and in transportation and shipbuilding. The Harbor Works Contract provided for the construction of a break-

water, entrance channel and basin and deep water wharves, and included the following works: 2,500 lin. ft. of break-water extension; the dredging of an entrance channel 500 ft. wide, with 22 ft. depth at lowest water (maximum tide 28 ft.), involving the removal of about 2,500,000 cu. yd. of sand, gravel and clay; the dredging of a large turning basin to a depth of 32 ft. at lowest water, requiring the removal of about 4,500,000 cu. yd. of sand, gravel and clay; the removal of some 140,000 cu. yd. of submarine rock, leading into the entrance to the drydock; the construction of a series of deep water piers.

Successive Dominion Governments have for a number of years endeavored to interest capitalists in investing in drydock and ship repair plants by undertaking to pay, as a subsidy, $4\frac{1}{2}\%$ a year for 35 years on the cost of the dock and repair yard built, on condition that the total cost of the drydock and yard shall not exceed \$5,500,000 for a dock of the first class, the general dimensions of which shall not be less than: length on blocks, 1,150 ft.; breadth at entrance, 125 ft., and depth of water over entrance sill at high tide 38 ft., and be capable of accommodating with ease and safety, the largest naval or commercial ship afloat of the time the dock construction is undertaken.

In 1911 the then Dominion Minister of Public Works succeeded in interesting old country capitalists, under the leadership of Norton Griffiths, in undertaking the construction of a first class drydock and repair yard at St. John. Construction was started in 1912, and in 1914, at the outbreak of the war, extensive operations were under way on the excavation and preparation of the drydock site. Like many other large projects, this soon felt the pinch of war times, with the resultant shortage and high price of both labor and material, so that after struggling along through the first two years of the war, further operations became impossible, construction operations ceased and the Norton Griffiths Co. was relieved of further obligations in connection with the drydock undertaking. Not until the end of the war, could any further interest be aroused in this undertaking which lay dormant until the autumn of 1918, when the St. John Drydock & Shipbuilding Co., representing Canadian capital entirely, took up the task where the Norton Griffiths Co. left off, assumed the obligations of the original undertaking, and has carried on the work continuously up to the present, when the project is in its final stage of completion.

The general dimensions of the drydock, as established by the terms of the Drydock Subsidies Act, are only slightly exceeded in actual construction. The overall length is 1,150 ft., the clear width at the entrance 125 ft., with 42 ft. of water over the entrance sill at extreme high tide. A comparison of these dimensions with those of other modern drydocks shows that the St. John drydock is actually the largest in the world. Bearing in mind that the largest ship afloat today, the White Star liner *Majestic*, is only 956 ft. long and that naval authorities are generally in agreement in the conclusion that ship dimensions have now reached their economic maximum, it would appear that entirely unnecessary length is provided in the St. John drydock. However, as it is being provided with an intermediate sill which will permit the whole dock to be divided into two entirely separate docking chambers, the inner one 500 ft. long and the outer one 650 ft. long, it will be appre-

ciated that this length is justifiable, as it provides for the accommodation, at one and the same time, of at least two moderate sized ships, and still can be utilized when the occasion arises, as a single docking chamber with sufficient capacity to accommodate the largest ship afloat today.

Concrete has been used throughout in the dock construction, with the slight exception that granite has been used to form the outline of the stops in the outer entrance and inner sill for the reception of the floating caisson, where concentrated pressures and wear will be excessive.

The cross-section of the docking chamber was an all important factor in the determination of the actual dock wall section. With the vast change in ships' cross section, from the older sailing ship, with its sharply defined keel and high sheer, to the modern flat bottomed ship, has come a like change in drydock chamber section. The older ships, possessing in themselves no ability to remain upright and on an even keel when removed from their natural element, required the extensive use of shores or props to support them when docked. This shoring necessitated a continuous flight of altars or steps in the face of the docking chamber walls for the reception of the ends of these shores. Today the need of lateral support is minimized by the wide bearing taken by the flat bottom of the modern ship on the dock floor, and the altar, as a result, has become an intermediate working level between dock coping and bottom, instead of a shoring support. To make these usable by workmen, has brought about a demand for wider altars, but even in the more modern drydocks this increased width has not yet been amply provided. In order to meet this requirement, and at the same time keep the width of docking chamber to a desired minimum at coping level, so that cranes of an excessively long working radius are not necessary, one solution only has been found, that of reducing the number of these altars to a minimum. A study of this question with reference to the St. John drydock resulted in three only being provided, two of these $2\frac{1}{2}$ ft. wide and the third and lowest 3 ft. wide. While the extra altar width, provided in this dock over altar widths as used in contemporaries such as the Champlain dock at Lauzon, Que., and the Commonwealth dock at South Boston, Mass., seems slight, the extra assurance of safety felt by one actually traversing these altars is greatly out of proportion to the increase in width. One of the accompanying illustrations of the dock's interior shows the arrangement of the altars.

Distribution Tunnel.—The modern drydock is an extensive open air workshop, in which innumerable intensive operations have to be carried on, all at the same time, yet with the least possible amount of confusion and interference, and practically all these operations require the use of equipment mechanically operated. Furthermore, because of the rapidity with which docking charges mount up with each additional hour that a large ship lies in the drydock, and because of the loss sustained by the owners while the ship is out of service, every provision must be made for conducting these operations as rapidly and continuously as possible. With these above requirements in mind, it was determined that a readily accessible, yet entirely unobstructive, distribution system must be provided throughout the perimeter of the dock, a system that would provide at

any and every point in the docking chamber such essentials as electricity for light and power, compressed air, water and even live steam. After consideration had been given to systems employed on other modern docks, such as those at Lauzon and South Boston, it was determined to make a rectangular tunnel the basis of the distribution system; this being located directly below the top of the wall and completely circuiting the whole perimeter of the dock, and of sufficient cross section to permit the passage of workmen, even with pipe lines installed on the tunnel sides. Originally it was intended to make this tunnel accommodate on its sides not only all water, air and steam lines, but also the cables carrying the electric energy to the various points about the dock. On further consideration of this, it was determined that a much cheaper and much more satisfactory layout of the cables would be obtained by providing a series of fibre conduits in the concrete, directly in rear of the tunnel, with pull boxes at 50 ft. intervals, opening into the tunnel from the conduit line.

The tunnel originates in the pumping station, located in the outer end of the north wall of the dock, and extends completely around the dock to a point in the south wall opposite the outer end of the pumping station. Between the pumping station and the power house, a similar tunnel is provided, so that a complete underground gallery is provided from the dock power house, on the north or left side of the dock entrance, to practically the extreme outer end of the south or right wall of the dock. By means of this tunnel, the requirements of electrical energy for light and power, compressed air for operating air tools, and water for fire protection, washing down the dock floor and to meet a docked ship's needs, are provided at all points around the dock and in an entirely unobstructive manner.

Electrical Distribution System.—The electrical energy requirements for the drydock are varied and extensive. Because of its adaptability and positive result in energy supplied, all the dock operating equipment is provided for direct motor operation, using in every case 550-v., 3-phase, 60-cycle alternating current. The unwatering, drainage and sump pumps of the pumping station present the largest demand at one point, and so a separate feeder circuit is provided to take care of this load of 2,465 h.p. The sluice gate valves on the filling and emptying culverts present a demand of only 75 h.p., but at five different and widely separated points in the dock's perimeter. Similarly, the 10 capstans, each operated by a 45 h.p. motor, require the supply of electric energy at 10 different points around the extent of the drydock. At either end of each caisson stop is a tap to provide energy for the operation of the 15 h.p. motor driven caisson unwatering pumps. In addition, the complete lighting of the dock with flood lights requires no less than 48 outlets in the dock chamber walls. By effecting a number of combinations of these demands, the whole distribution of power and lighting energy is obtained by the use of only 6 feeder circuits, and these combinations are so arranged that, even in the event of an interruption occurring in one of the circuits, there is still another available, supplying a similar combination of equipment demands, which can be called into use to replace other units of equipment rendered useless by this short circuit.

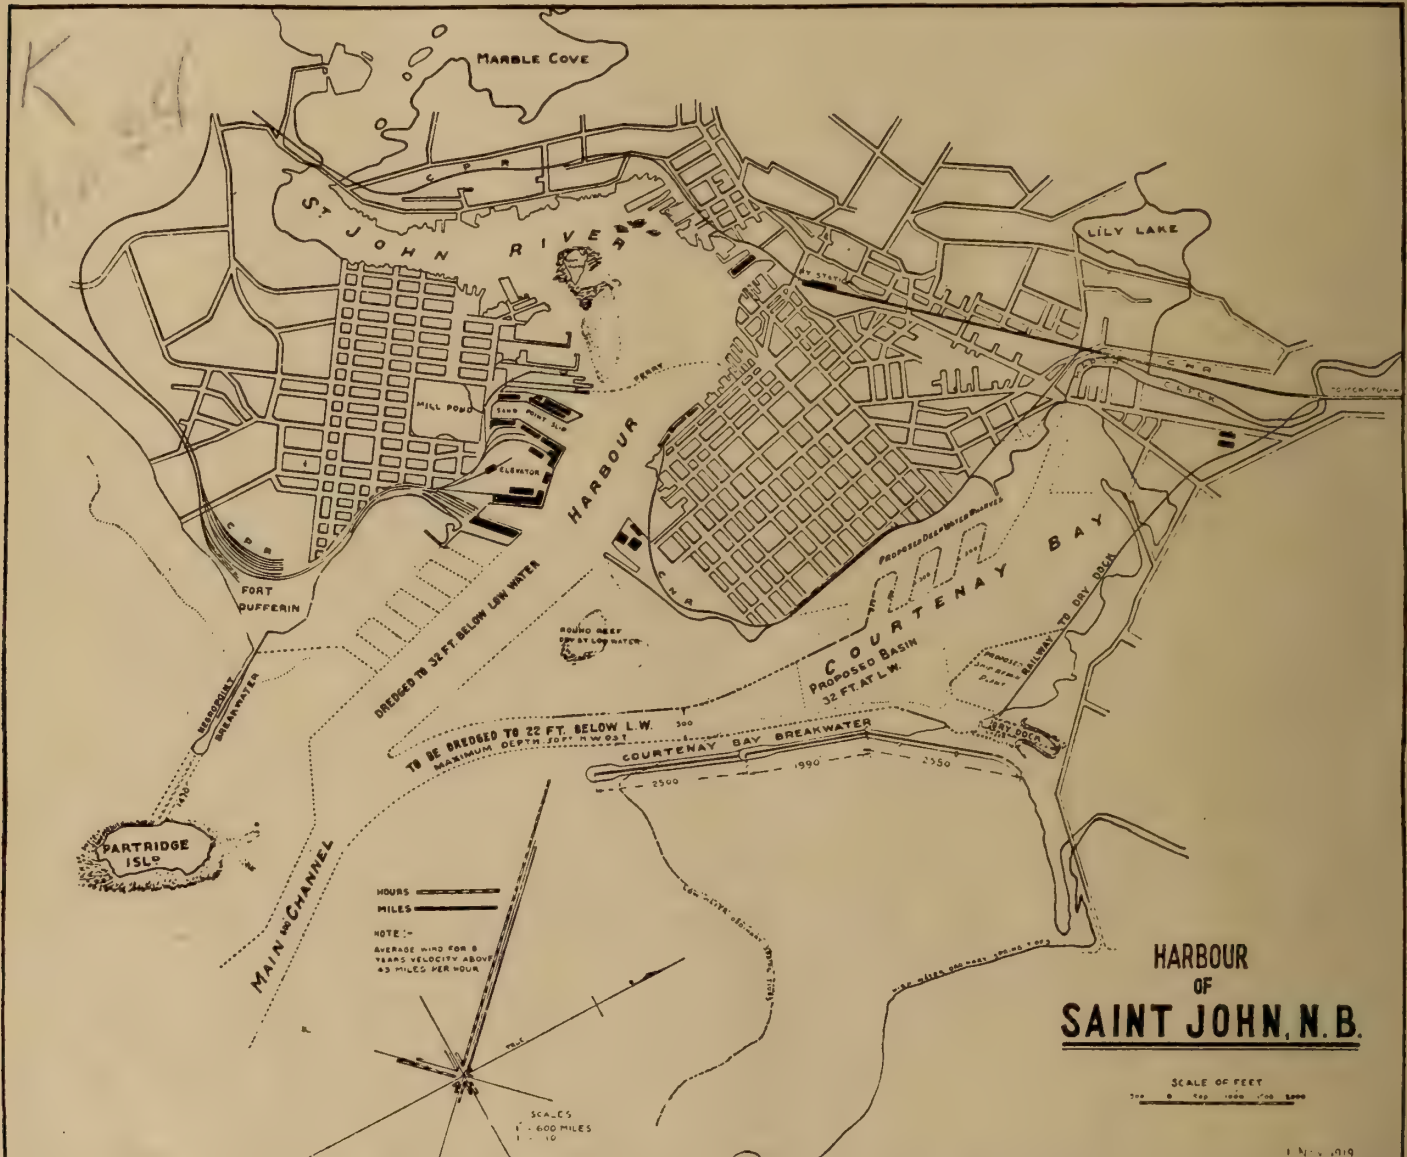

Lighting Equipment.—For dock lighting, flood lights will be used entirely,

and these will be arranged separately, one group for lighting the dock chamber and the other to light the top of each dock wall with the working area in rear. At intervals of 50 ft. along the face of each wall, 2 ft. above high tide level, are recesses approximately 2 ft. square by 15 in. deep. In each of these will be a wide angle flood light mounted on swinging base, so that the direction of the light can be altered either in a horizontal or vertical direction. Mounted on the back wall of each of these recesses will be a 3-outlet plug box of absolutely watertight and weatherproof construction. Two of the three outlets will be on the lighting circuits, giving a plug

tem will be accommodated in one of the distribution conduits, with outlets for attaching portable telephones at control points such as the pumping station, the different valve recesses and the floating caisson, so that the dock master can communicate directly with any of his assistants or operators from any point about the dock.

Compressed Air and Water Mains.—The air compressors are located in the power house and the air mains follow the same course as the electric circuits from this point through the end of the pumping station and thence around the dock in the distribution tunnel, the main being bracketed on the tunnel walls. At

damage. Water, at city pressure, will be similarly distributed, with all mains and control valves in the wall tunnel. For fire protection, hydrant connections are provided on the water main in the tunnel, directly alongside manholes in tunnel roof, with regular wall type hose brackets carrying connected lengths of hose on the tunnel wall beside each hydrant. From the same water main other pipes are carried down and in the concrete of the walls, to outlets in the face of the wall a few feet above dock floor level. Each of these outlets is fitted with standard hose connection, the shut-off valve being located in the tunnel. These down pipes provide the water for

connection to the flood light in the recess and a second plug connection for an extension cord to provide for taking lights to the bottom of the dock and underneath a vessel on the blocks. The third and larger connection, with a capacity of 50 amperes, is provided for operating electrically driven drihs or small portable motor driven welding units. Similar wide angle flood lights, but of greater capacity, will be located at the inner and outer ends of each dock wall, elevated to a height of about 30 ft. above wall level on removable towers, so that the light can be directed most effectively over the full extent of the dock wall or the working area in rear.

An intercommunicating telephone sys-

tem will be accommodated in one of the distribution conduits, with outlets for attaching portable telephones at control points such as the pumping station, the different valve recesses and the floating caisson, so that the dock master can communicate directly with any of his assistants or operators from any point about the dock.

Compressed Air and Water Mains.—The air compressors are located in the power house and the air mains follow the same course as the electric circuits from this point through the end of the pumping station and thence around the dock in the distribution tunnel, the main being bracketed on the tunnel walls. At

flushing down the dock floor or scrubbing a ship's sides and bottom.

The sewerage system provided is rather an innovation. Heretofore, even in the most modern docks, immediately a ship is received in the dock and the water removed, all the ship's lavatories, bilge water discharges, steam drains, etc., are made inoperative for the protection of the workmen engaged around or under the ship on the dock floor, and to prevent the accumulation of offensive waste discharges which, under such conditions, would be made on the dock floor from the continued operations of these outlets. Putting these conveniences out of operation has very materially handicapped the ship itself, and also has been

the source of a great loss of time with workmen, employed in the interior of a ship. When the White Star s.s. *Majestic* was docked in Oct., 1922, in the Commonwealth drydock at Boston, owing to all lavatory and waste discharges, etc., of the ship being closed while in the dock, the majority of the crew of some 1,100 persons had to be removed from their quarters on the ship and accommodated at hotels in the city, not only a large item of expense, but a very great inconvenience and loss of time to the many members of the crew whose services were still urgently required on the ship for repair and overhaul work incidental to the docking operation. To eliminate such inconvenience and expense, the St. John drydock is provided with a complete sewerage system, so that a ship may be received in dock and have all necessary work done without any interruption whatever to the operation of its usual waste discharges.

The pumping station occupies an 80 ft. section of the north wall of the drydock, widened out sufficiently to give required wall sections between dock and station chamber, and again in rear of the 22 ft. wide space representing the pumping station itself. Below the three main pumping units, the suction chamber, 22 ft. wide by 14 ft. high, with roof at approximately dock floor level, is continuous, and has the two separate and independent 8 x 10 ft. unwatering tunnels, from the outer and inner docking chambers, entering this suction chamber at its inner end. Each of these tunnels is controlled by a sluice gate valve located at this point of junction with the main suction chamber, thus allowing for their independent control and the pumping out of either the outer or inner chamber independently of one another. The motor driven valve operating machinery is thus located in the inner end of the pumping station and so concentrates the control of the pumping operation entirely at the one point in the station itself.

The pumping equipment was supplied by the Goldie & McCulloch Co., and consists of three 48 in.-42 in. Rees Roturbo patent pressure chamber, double suction, volute, centrifugal pumps, direct connected to 750 h.p., Westinghouse vertical, self starting, synchronous motors, for the emptying of the dock, and each of these large pumps is provided, on its discharge end, with a 42 in. single door type non-return valve and a 42 in. motor operated gate valve, for temporarily or completely isolating the pumps from the discharge tunnel as desired. To handle dock drainage, two 15 in.-12 in. pumps, of the same type as the main pumps, are provided, each driven by a Westinghouse 100 h.p. vertical induction motor with automatic starter and float control switch, and a 15 in.-4 in. Rees pump driven by a 15 h.p. motor constitutes the sump pump required.

The caisson for closing off the docking chambers from the outside water when the dock is to be emptied, is of the floating type generally used in large modern drydocks, and that provided at St. John follows very closely, both in design and operation, similar floating caissons with which such drydocks at the Champlain one at Lauzon and the Commonwealth one at Boston are equipped. In fact, as the Commonwealth drydock one in every way proved so entirely satisfactory, its design and construction were duplicated at St. John, changes in dimensions only being made to suit the different cross section of the latter drydock entrance and intermediate sills. The caisson is

simply a vessel of rather unusual lines and cross section. Both ends are identical in outline and terminate in a distinct, projecting stem, and this same projection carries as a keel across the bottom between uprights. Faced on either side with oak, this projecting stem and keel, when the caisson is in place across the dock entrance, make a complete and continuous contact with the projecting granite stop in the outer or intermediate entrance walls and floor, the pressure of water on one side of the caisson only, with the drydock empty, creating the desired water seal between oak and granite. Below deck no. 2, which is itself watertight, the caisson is divided into 5 separate chambers—2 in either end of similar dimensions, and a large middle compartment. This middle section has 2 openings, one on either side, connecting to the outside, but controlled by double gate valves. Similar connection is provided to the end compartments from the centre division, also under gate valve control. All gate valves have extension spindles with operating headstocks on

twin valve control is provided on the scuttling connections to the sea to insure these being always capable of being closed off, should one valve become plugged or jammed in its open position. The only unusual feature of the St. John caisson is in its being provided with a standard gauge track across its top, thus providing rail connection from one side to the other of the dock by this route. The one caisson now completed and in place across the outer dock entrance, was fabricated and erected by the Dominion Bridge Co.

The repair plant consists of, in addition to the power house, a machine shop, a boiler, blacksmith and fabricating shop, as well as a carpenter shop and stores building with second story accommodation for a mould loft. These buildings are all of reinforced concrete construction and are located immediately alongside the dock and parallel to its length, yet with ample working area between buildings and the side of the dock. An underground tunnel connects all buildings with the power house, so that electrical

Portion of St. John Drydock & Shipbuilding Co.'s Drydock at St. John, N.B., showing altar arrangement. Photographed from caisson Sept. 20, 1923.

deck no. 2.

When afloat with a light draft of approximately 28 ft. these compartments are dry, except for such water as may be carried in the end trimming compartments to maintain the caisson on an even keel longitudinally. When the drydock is to be closed, the caisson in its above condition is floated into position across the entrance, where its keel will be, at high tide, 14 ft. or so above the entrance sill and the stem clear of the wall stops. The valves on the side connections are then opened, admitting water to the centre compartment, until the caisson sinks to a position of rest on the sill, its stem and keel in contact throughout with the face of the granite stop. To remove it again from this position in opening the dock, this water ballast is pumped overboard by the 12 in. vertical motor driven pumps located below deck no. 2, bringing the caisson again back to its light draft condition, when it can be floated out of the dock entrance. The

energy, steam for heating and power, compressed air and water will be supplied to each and all, with nothing in the nature of wires or pipes above ground to interfere with, or be interfered with by, the movement of materials between the buildings and the dock. These buildings are equipped throughout with all necessary machines of sufficient size to handle any class of repair work that may originate from any ships which the drydock itself can accommodate.

The power house installation consists of a battery of four 500 h.p. Robb water tube boilers, equipped for firing with crude oil fuel. Two non-condensing De Laval steam turbines and one Wait mixed flow condensing turbine, each direct connected to 1,100 h.p. Allis Chalmers 550-volt, 60-cycle, alternating current generator, constitute the power plant. The main switchboard, controlling the whole of the electrical system of the dock and yard, is located in the power house and has incorporated in it panels to provide

for the supplying to any outside system of any surplus energy available from this plant, in excess of the demand of the dock and shops themselves. Two 2-stage belt driven air compressors, each driven by a 300 h.p. synchronous motor, are installed in the turbo generator end of the power house, to provide the air requirements of the drydock and repair shops.

Cranes.—The drydock is being equipped with a travelling locomotive type crane with a lifting capacity of 20 tons at 80 ft. radius, and this machine, with the track layout, will reasonably serve not only all parts of the dock, but the repair yard itself. In addition, a fixed derrick of 75 tons capacity at 65 ft. radius is being provided on the wharf at the entrance to the dock, so that heavy lifts such as arise with the placing or removal of ships' boilers, warships' guns, etc., can be made while the ship is afloat when hull repairs are not required.

Slipway.—In order to accommodate small ships, which if received in the drydock for repairs, would be subject to docking and lay day charges quite out of proportion to their size, a slipway is provided alongside the dock entrance, which will accommodate any ship up to 250 ft. long with a dead weight not in excess of 1,800 tons. The slipway consists of a carriage or cradle, fitted with keel and bilge blocks, travelling on a wide gauge inclined track, extending down to below low tide. The ship to be docked is floated, at high tide, to a position in contact with the cradle lowered to the bottom of the incline. The keel and bilge blocks are then adjusted to fit the ship's bottom and then carriage and ship are slowly hauled up the grade, by a large winding engine at the head of the slipway. The cradle thus receives the full ship weight and then is drawn to the top of the incline, when the ship is then in a position entirely above high tide level and accessible at all points for continuous repair or overhaul operations. This slipway is provided, in excess of the repair yard equipment required for the main dock, under the terms of the Drydock Subsidies Act, but by its addition to the other yard facilities, it is anticipated that every call for ship repair work, no matter how large or how small, can be properly accommodated, thus fulfilling more completely the intended object of this project.

The foregoing descriptive matter has been reproduced from a paper on the construction of the drydock, by E. G. Cameron, Chief Engineer, St. John Drydock & Shipbuilding Co., which he read before the Engineering Institute of Canada's St. John branch recently.

The Company's Personnel.—The St. John Drydock & Shipbuilding Co's directors are James Playfair, Midland, Ont., President; D. S. Pratt, Midland, Ont., Vice President and General Manager; Thomas A. Duff, Toronto, Secretary Treasurer; F. W. Grant, Midland, Solicitor; George McAvity and J. E. Moore, St. John, N.B.; W. E. Phin, Hamilton, Ont.; W. B. Sheppard, Waubaushene, Ont.; D. L. White, Midland, and J. B. Craven, New York.

Great Lakes Levels.—The United States Lake Survey reports the monthly mean stages of the Great Lakes for October as follows, in feet above mean sea level:—Superior, 602.06, against 602.10 in September; Michigan-Huron, 579.38, against 579.64; St. Clair, 574.19, against 574.49; Erie, 571.25, against 571.55; Ontario, 244.65, against 244.03.

The Opening of the Drydock and its Attendant Functions.

The opening of the drydock at St. John on Oct. 29, was the occasion for a large gathering of persons particularly interested in marine matters, who were the company's guests. Most of those from Quebec and Ontario assembled in Montreal on the morning of Oct. 28, and left there shortly after noon on a special C. P.R. train, consisting of a compartment observation sleeping car, 4 compartment sleeping cars, a dining car, a colonist car and a baggage car, among those on board being the following directors, etc.: D. S. and Mrs. Pratt; Thomas A. and Mrs. Duff; F. W. and Mrs. Grant; W. E. Phin, D. L. and Mrs. White. Much regret was expressed at the absence of the President, James Playfair, who, on account of pressure in business in connection with the Great Lakes Transportation Co., of which he is also President, and other matters, was unable to attend. Among the guests were Lt. Col. H. Cockshutt, Lieutenant Governor of Ontario, and his aide-de-camp, Lt. Col. Fraser; C. C. Hele, General Secretary to the Premier of Ontario; R. W. Bruce, naval architect and marine engineer, Washington, D.C.; Hugh Calderwood, Chief Surveyor for Canada, American Bureau of Shipping, Barrie, Ont.; K. M. Cameron, Chief Engineer, Public Works Department, Ottawa, and Mrs. Cameron; S. R. Campbell, C.A., Montreal; E. R. Carrington, President, Thiel Detective Co., Montreal; H. M. Davy, in charge of test borings, Public Works Department, Ottawa; Manning W. Doherty, M.L.A., Toronto; Lt. Col. E. G. M. Cape, D.S.O., Montreal; G. H. Flood, Contract and Purchasing Agent, Marine and Fisheries Department, Ottawa; James French, Chief Surveyor, United States and Canada, Lloyd's Register of Shipping, New York; W. I. Hay, Principal Surveyor for Canada, and Duncan McArthur, Principal Engineer Surveyor for Canada, British Corporation for Survey and Registry of Shipping, Montreal; Wm. Inglis, President, John Inglis Co., Toronto; Sir Joseph W. Isherwood, Bart., London, Eng., and New York; Major T. C. Keefer and Mrs. Keefer, Ottawa; A. MacCorkindale, New York Manager, Morse Drydock & Repairing Co.; T. M. Melrose, Dismantling Engineer, St. John Drydock & Shipbuilding Co., Drummondville, Que.; H. W. Murray, bond broker, Toronto; J. W. Nicholl, Manager, Furness Withy & Co., Montreal; P. Pagano, Bedford Construction Co., Halifax, N.S.; T. A. Somerville, of E. G. M. Cape Co., and Mrs. Somerville, Montreal; J. H. Spence, K.C., Toronto; Col. H. A. Stewart, D.S.O., of Lukis, Stewart & Co., insurance agents, Montreal; R. J. Taylor, Secretary, Willcox, Peck & Hughes, insurance, New York; Capt. E. E. Tedford, General Superintendent, Canadian Government Merchant Marine, Montreal; T. C. Warkman, Salvage Association, Montreal; J. L. Weller, ex Chief Engineer, Welland Ship Canal, now President, Canada Pipe & Products Co., Hamilton, Ont.; J. Wilkinson, Manager, Midland Shipbuilding Co., Midland, Ont.; G. A. Wood, of Carter & Wood, insurance, freight and ship brokers, Montreal; Acton Burrows, Proprietor, Canadian Railway and Marine World. D. S. Pratt, Vice President and General Manager, St. John Drydock & Shipbuilding Co., who was in general charge of the party, had made most admirable arrangements, and proved an excellent host. He was ably assisted by W. C. Birrell, of the company's staff at St. John, who met the party at Montreal and accompanied it to

St. John. The C.P.R. was represented by A. B. Burke, Travelling Agent, Montreal, who had charge of the berthing and other arrangements, which were most satisfactory, as also was the dining car service. J. Harry Smith, Canadian Press Representative, C.P.R., also accompanied the party, and A. Williams, Superintendent, Farnham Division, C.P.R., travelled on the train from Montreal to Megantic. St. John was reached early on the morning of Oct. 29, the party being received by Frank M. Ross, General Manager, St. John Drydock & Shipbuilding Co., who made most complete arrangements for accommodation there. A party of C.P.R. officials, including A. D. MacTier, Vice President, Eastern Lines; W. R. MacInnes, Vice President, Traffic Department; G. M. Bosworth, Chairman, Canadian Pacific Steamships Ltd., and Commander J. T. Walsh, R.N.R., Manager, Canadian Pacific Steamships Ltd., went on the regular train, which preceded the special train by half an hour, travelling in Mr. MacTier's business car, St. Andrews.

The Governor General, Lord Byng of Vimy, and some members of his staff, travelled to St. John by the Canadian National Rys., as also did Hon. A. B. Copp, Secretary of State; and Hon. J. H. King, Minister of Public Works. Sir Henry Thornton, President, Canadian National Rys., who was on an inspection trip in the maritime provinces, went, accompanied by J. E. Dalrymple, Vice President, Traffic Department; S. J. Hungerford, Vice President, Operation and Construction Departments; and W. S. Thompson, Director of Publicity. A number of C.N.R., Atlantic Region officials also attended, including L. S. Brown, General Manager; W. U. Appleton, General Superintendent; A. F. Stewart, Chief Engineer; A. T. Weldon, Traffic Manager; R. W. Simpson, Assistant to General Manager; F. W. Robertson, General Passenger Agent; M. F. Tompkins, General Freight Agent; G. E. McCoy, Superintendent of Equipment; and W. N. Rippey, Superintendent, Moncton Division.

Prior to the opening of the drydock, the company entertained some 400 guests, including many from a distance, and a large number of St. John people, at luncheon in the moulding loft. In the absence of President James Playfair, D. L. White, of Midland, another director, occupied the chair, and, after proposing the King's health, spoke on a number of marine matters. J. E. Moore, another director, proposed the toast of Courtenay Bay, which was responded to by Sir Douglas Hazen, Chief Justice of New Brunswick, and former Minister of Marine and Fisheries, in a magnificent speech, most beautifully worded, and full of valuable information and patriotic utterances. The Province of New Brunswick and City of St. John was responded to by Lt. Gov. W. F. Todd, who occupied considerable time; by Premier Veniot, Mayor Fisher, of St. John, Hon. J. B. M. Baxter, M.P. for St. John City and St. John and Albert Counties, whose speech, commendably brief, was remarkably to the point and most appropriate, also by Col. Murray MacLaren, the other M.P. for St. John City and New Brunswick and Albert Counties. The Public Works Department was proposed by Lt. Col. E. G. M. Cape, D.S.O., of Montreal, one of the contractors for part of the plant, and responded to by Hon. J. H. King, Minister of Public Works. Sir Henry Thornton, President, Canadian National Rys., and Grant Hall, Vice President, C.P.R., were to have responded.

(Continued on page 612.)

Ship Building and Ship Repairing Throughout Canada and Newfoundland.

B.C. Marine Engineers & Shipbuilders Ltd. has deposited with the Minister of Public Works, at Ottawa, a description of site and plans of a marine railway proposed to be built on Burrard Inlet, Vancouver, in front of lot 3, block 1, subdivision E, D.L. 183.

Campbell River, B.C.—The *Edward White* was launched recently at Campbell River, B.C., for the Crosby Methodist Marine Mission. She is 36 ft. long by 9½ ft. wide, and draws 3 2/3 ft. She is fitted with an engine capable of developing 7 knots, and has sleeping accommodation for 6.

Canadian Vickers Ltd., Montreal, did the following work during October at its Maisonneuve plant: *S.s. Pabjune*, 1,859 gross tons, Mapes & Ferdon: Docked Sept. 30 for survey and repairs to bottom damage, due to grounding, including 23 new shell plates and 23 shell plates treated; also floors, girders, frames and other internal work in way of damage repaired and renewed, as required; sundry owners' repairs also executed. Undocked Oct. 16. *S.s. Sheba*, 2,268 gross tons, Canadian Government Merchant Marine: Docked Sept. 29 for survey and ice damage repairs to fore end of hull, including 20 new shell plates, 26 shell plates treated; also repairing and renewing all internal damaged work on frames, floors, girders, etc., in way of ice damage; also repairs to propeller, rudder, bulwarks, and sundry owners' repairs. Undocked Oct. 12. *S.s. Canadian Ranger*, 5,752 gross tons, Canadian Government Merchant Marine: Supplied new liner for tail shaft. *S.s. Canadian Miller*, 5,439 gross tons, Canadian Government Merchant Marine: Docked Oct. 12 for owners' repairs and bottom painting, also boring out h.p. cylinder and other engine repairs. Undocked Oct. 14. *S.s. Trontolite*, 7,115 gross tons, Imperial Oil Ltd.: Owners' repairs, including new tonnage openings for Panama Canal; also hull topside painting. *S.s. Mina Brea*, 4,145 gross tons, Imperial Oil Ltd.: Preliminary work in connection with general overhaul. *S.s. Vredenburg*, 6,419 gross tons, Thos. Harling & Sons, agents: Docked Oct. 14 for survey and repairs to bottom damage, including 3 new keel plates and 1 new shell plate; 5 shell plates off and treated and internal repairs and renewals to floors, frames, girders, etc.; also sundry owners' repairs. Undocked Oct. 23. *S.s. Berwyn*, 4,992 gross tons, Canadian Pacific Steamships Ltd.: Docked Oct. 24 for repairs to damaged shell plating, including 1 new plate and 16 plates treated, also repairs to propeller, rudder and bilge keels, also bottom painting. Undocked Oct. 29. *S.s. Odland*, 1,244 gross tons, Hanson Produce Co.: Docked Oct. 18 for survey and underwriters' repairs, including damage to keel plate and shell plating; also examination of propeller and steering gear and owners' minor repairs. Undocked Oct. 20.

The following work was done by its harbor department: *S.s. Beaverton*, 2,012 gross tons, Canada Steamship Lines, repairs to hull. *S.s. Timavo*, 7,434 gross tons, Navigazione Libera Triestino, renewing copper steam pipes and valves. *S.s. Gaspesia*, Clarke Steamship Co., voyage repairs. *S.s. Winona*, 2,085 gross tons, Canada Steamship Lines, repairs to hull. *S.s. Arabian*, 1,073 gross tons, Canada Steamship Lines, electrical repairs. *S.s. Deuel*, 5,585 gross tons, United States Shipping Board, reboring h.p. cylinder and general voyage repairs.

S.s. Kristianafjord, 7,000 gross tons, Norwegian American Line, voyage repairs. *S.s. Hamilton*, Canada Steamship Lines, fitting new winch and seat on deck. *S.s. Thunder Bay*, 1,870 gross tons, Canada Steamship Lines, fitting new winch and seat on deck. *S.s. Athenia*, 12,000 gross tons, Anchor-Donaldson Line, repairing turbo-generator. *S.s. Marte*, 5,629 gross tons, Societe Ligure di Arma-mento, temporary repairs to hull damage. *S.s. Strassa*, 5,500 gross tons, Trankakt Grangesberg-Oxelosynd, voyage repairs. *S.s. Afghanistan*, 5,516 gross tons, Hindustan Steam Shipping Co., general repairs for voyage. *S.s. Jersey-moor*, 5,662 gross tons, Moor Steamship Co., repairs to tunnel top.

Collingwood Shipbuilding Co., Collingwood, Ont., will add 74 ft. to the *Great Lakes Transportation Co.'s s.s. Glenisla*

Dominion Marine Association.

Honorary President, A. A. Wright, Vice President and Managing Director, Davie Shipbuilding and Repairing Co., Montreal and Toronto.

President, T. R. Enderby, Operating Manager, Canada Steamship Lines, Ltd., Montreal.

First Vice President, G. J. Madden, George Hall Coal and Shipping Corporation, Ltd., Ogdensburg, N.Y.

Second Vice President, A. E. Mathews, Mathews Steamship Co. Ltd., Toronto.

Executive Committee, The President, First and Second Vice Presidents; and W. E. Burke, Century Coal Co. and Canada Steamship Lines Ltd.; W. Crawford and Yvon Dupre, Sincennes-McNaughton Lines Ltd., Montreal; L. L. Henderson, formerly of Montreal Transportation Co., honorary member; W. J. McCormack, Algoma Central Steamship Lines, Sault Ste. Marie, Ont.; Col. G. P. Murphy, C.M.G., Ottawa Transportation Co., Ottawa, Ont.; C. H. Nicholson, Canada Atlantic Transit Co., and Canadian National Ry. Central Region Car Ferries, Toronto; E. W. Oliver, Niagara, St. Catharines & Toronto Navigation Co., Toronto; J. F. Sowards, Kingston, Ont.; J. F. M. Stewart, Toronto; John Waller, Keystone Transports Ltd., Montreal; Senator L. C. Webster, Webster Steamship Co. Ltd., Montreal.

Counsel, Francis King, K.C., Kingston, Ont.

Official Organ, Canadian Railway and Marine World, Toronto.

during the winter. The *Glenisla* was built at Detroit, Mich., 1903, and was formerly named the *Western Star*. Her dimensions are: Length, 400 ft.; breadth, 50 ft.; depth, 24.3 ft.; tonnage, gross, 4,587 tons; register, 3,404 tons. She is screw driven by engines of 169 h.p.

Davie Shipbuilding & Repairing Company, Ltd., Lauzon, Que.—A winding-up order has been granted, Gordon W. Scott being appointed provisional liquidator.

Halifax Shipyards Ltd., Halifax, N.S., did the following repair work recently: For Farquhar & Co., Halifax: *S.s. Sable One*, which had sustained extensive damage by striking a submerged wreck near Lamaline Head, Nfld., and from being beached afterwards, docked Aug. 27, for repairs, including 18 new plates and 12 plates faired and refitted, 6 plates faired in place, also extensive interior repairs to floors, tank top, machinery, etc.; undocked Sept. 14. *S.s. Strandhill*, scraped and painted and generally overhauled. Dominion Coal Co.'s *s.s. Lingan*, which hit a dock at Quebec, requiring 8 new plates, and 10 additional plates treated. French Cable *s.s. Edouard Jeramec*, docked Sept. 19, for semi-annual overhauling, including scraping, painting,

drawing tail shaft and removing propeller for examination, as well as considerable miscellaneous work; undocked Sept. 25. Commercial Cable Co.'s *s.s. Marie Louise MacKay*, for annual overhauling, scraping, painting, etc. H.M.C.S. *Patriot*, semi-annual overhauling, cleaning, painting, examination of sea-cocks and re-turning both propeller shafts, fitting new bushes in both stern ends. The *s.s. Canadian Settler*, bought by New Glasgow, N.S., interests, represented by Capt. Peter Graham, and now called the *s.s. Portmore*, was docked Oct. 17, for inspection, annual overhauling, cleaning, painting, etc. A large number of men were continuously employed, completely overhauling and repairing main engines of auxiliary machinery, pipe lines, electric wiring, etc.; undocked Oct. 19. The *s.s. Dagchild*, owned by Dominion Coal Co., while leaving Philadelphia, Pa., Oct. 11, had an explosion in her port main boiler, three men being killed. Bids for repairs having been called for by the underwriters, Halifax Shipyards sent a representative there, and was awarded the contract for repairing this damage. The *Dagchild* arrived at Halifax on Oct. 28. On Oct. 20, the *s.s. King Frederick*, owned by Dodd, Thompson & Co., struck the rocks at Point Diamond, St. Pierre, in thick weather. She proceeded under her own steam to North Sydney, and after temporary repairs were completed, was sent to Halifax to be drydocked for survey, which was held Oct. 27. Tenders were submitted by representatives of 9 ship repairing firms, 4 from New York, and one each from Boston, Montreal, Quebec, St. John and Halifax, with the result that the contract was awarded to Halifax Shipyards Oct. 29. The *King Frederick* struck stem on, tearing away the under water portion of the bow from the 14 ft. mark to the collision bulkhead, necessitating the renewal of 13 new plates, one plate to be removed and replaced, and the renewal of 21 frames port and starboard.

A Halifax correspondent has written Canadian Railway and Marine World as follows: "In view of the publicity that is frequently given in United States paper about tenders submitted for ship repair work, I am sending you the following information, thinking that it may be of interest to your readers. The *s.s. King Frederick*, owned by Dodd, Thompson & Co., London, Eng., struck at Point Diamond, St. Pierre, on Oct. 20, and, although making considerable water, managed to reach North Sydney, N.S., without assistance. After temporary repairs were made there, she went to Halifax and was drydocked on Oct. 27 for survey and examination. The owners and underwriters having invited representatives of the principal Canadian and American ship repairers on the Atlantic coast, called for tenders for repairs, which were submitted as follows: Halifax Shipyards, Ltd., \$12,975; Davie Shipbuilding & Repairing Co., \$13,428; Staten Island Shipbuilding Co., \$14,100; Canadian Vickers, Limited, \$14,600; Robins Drydock & Repair Co., \$14,850; Morse Drydock & Shipbuilding Co., \$16,000; Bethlehem Shipbuilding Corporation, \$18,873; St. John Drydock & Shipbuilding Co., \$20,700; New York Harbor, \$21,216. All the tenderers specified running days, except the Davie Shipbuilding & Repair Co., which specified working days. Halifax Shipyards, Ltd., was notified on the morning of Oct. 29 that its

tender had been accepted, and, as it offered to complete the work in 16 days, its time would expire on the morning of Nov. 14. The ship had struck the rocks stem on, and had torn away the under water portion of the bow from the 14 ft. mark to the collision bulkhead, necessitating the renewing of 13 plates and 21 frames. In addition there was considerable internal damage, particularly to the collision bulkhead limbers and shifting boards. The work was completed Nov. 11, at 7 p.m., 2½ days ahead of time, and the ship cleared for Montreal to load grain for Europe.

Smith & Rhuland, Lunenburg, N.S., have built a schooner named *I'm Alone*, the principal particulars of which are: length, 125 ft.; beam, 27 ft.; draft, 10½ ft.; gross tonnage, 181.70; net tonnage, 90.45. The cabin has 4 rooms for the owner, captain, mate and engineer, and elsewhere there are 14 bunks for the crew. She is equipped with electric light, and hot and cold water service, and has space for 1,700 gall. of fresh water, and 3 tons of ice. She is provided with two 100 h.p. Fairbanks-Morse type C.O. engines, which give her a speed of 13 knots.

Yarrows, Ltd., Victoria, B.C., did the following repair work during October: Canadian Pacific Ry. B.C. Coast Service, s.s. *Princess Alice*, 3,099 tons, repairs to bulwarks; s.s. *Princess Adelaide*, 3,061 tons, docked, cleaned and painted, sea connections overhauled and zincs renewed; s.s. *Princess Victoria*, 1,943 tons, docked, cleaned and painted, sea connections overhauled and zincs renewed; s.s. *Princess Charlotte*, 3,844 tons, drydocked, 3 propeller blades changed, ship cleaned and painted; s.s. *Princess Beatrice*, 1,290 tons, docked, cleaned and painted and sundry repairs. **Furness Withy & Co.,** s.s. *Siberian Prince*, 5,604 tons, work progressing rapidly on extensive bottom damage due to stranding. **Knut Knutsen, Norway,** s.s. *Golden Gate*, 4,854 tons, casting and machining new spare propeller. **Pacific Salvage Co. s.s. Algerine**, 592 tons, docked for survey. **Canadian Explosives, Ltd. s.s. Polar Forcite**, new steering gear and rudder.

Canadian Government Merchant Marine Operations, Etc.

R. B. Teakle, General Manager, left Montreal, Oct. 19, on an inspection trip to the Pacific coast, accompanied by **W. A. Cunningham**, Traffic Manager, **C.G. M.M.**, and **D. O. Wood**, Manager, Foreign Freight Department, Canadian National Rys. They went right through to Vancouver, after which Messrs. Cunningham and Wood visited Victoria, Prince Rupert and Seattle, Mr. Teakle being able to go to Seattle only, on account of many matters to be attended to at Vancouver. They returned to Montreal together on Nov. 12.

Traffic Conference.—**Wm. Phillips**, European Manager, London, Eng.; **G. E. Bunting**, Australasian Manager, Auckland, New Zealand; and **A. Brodstedt**, General Traffic Agent for the Orient, Hong Kong, China, arrived in Montreal in November, for a conference with **R. B. Teakle**, General Manager, on traffic matters.

Officers of Steamships.—The following have been appointed recently: Captains—**Canadian Harvester**, **J. Newhook**; **Canadian Miller**, **J. McFadyen**; **Canadian Navigator**, **E. A. LeBlanc**; **Canadian Ranger**, **P. J. Murphy**; **Canadian Trooper**, **A. J. Gilbert**. Chief engineers—**Canadian Engineer**, **J. Brownlee**; **Canadian Trooper**, **J. W. D. Cumming**.

The winter port staff took up their

quarters at St. John, N.B., Nov. 25.

The s.s. *Canadian Conqueror*, which at the time of writing (Nov. 20), is expected at St. John, N.B., from Antwerp and London, about Nov. 30, with a general cargo, will probably be the first of the arrivals at this port for the winter season.

The s.s. *Canadian Navigator* sailed from Halifax, N.S., for St. John's, Nfld., Nov. 14, among her cargo being several narrow gauge locomotives from the Prince Edward Island Ry. for the hydro-electric plant in the Humber Valley, Nfld., which is being built by the Newfoundland Power & Paper Co. Ltd., in which the Reid Newfoundland Co. and Sir W. G. Armstrong, Whitworth & Co. are interested. (Press report.)

The s.s. *Canadian Seigneur* will, it is reported, be transferred from the Atlantic to the Pacific coast, for the new service from British Columbia ports to Great Britain.

The s.s. *Canadian Trooper* is reported to have been transferred from the Atlantic to the Pacific coast, for the British Columbia-California run.

Vancouver Dock.—The C.G.M.M. ceased using the Dominion Government dock at the end of November, and will use the harbor commission's Ballantyne pier in future.

Vancouver Service via Panama.—The British Columbia Associated Boards of Trade, meeting at Vancouver, Nov. 16, decided to urge upon the Dominion Government the desirability of establishing a regular service between Montreal, Halifax and United States and Pacific coast ports with C.G.M.M. steamships.

St. John, N.B., Sailings.

London and Antwerp service.—Dec. 5, Canadian *Conqueror*; Dec. 19, Canadian *Planter*.

Cardiff and Swansea service.—Dec. 14, Canadian *Victor*; Dec. 28, Canadian *Mariner*.

Halifax Sailings.

Hamilton, Bermuda; Nassau, Bahamas; Kingston, Jamaica; Belize, British Honduras service.—Dec. 20, Canadian *Fisher*.

Australia and New Zealand service.—Dec. 22, Canadian *Constructor*.

Vancouver Sailings.

United Kingdom service.—Dec. 20, Canadian *Skirmisher*; Jan. 20, Canadian *Transporter*.

Australasian service.—Dec. 10, Canadian *Importer*, for Auckland and Sydney.

Canadian Pacific Steamships, Ltd.

The company has opened an office at Unter der Linden 39, n.w. 7, Berlin, Germany.

The s.s. *Melita*, which had been in drydock at Levis, having her propeller repaired, sailed from Quebec, Nov. 17.

The company's trans-Pacific ships resumed calling at Yokohama, Japan, Nov. 29, and will resume calling at Manila, with the *Empress of Russia*, sailing from Vancouver, March 6, 1924.

The *Empress of Scotland* and *Empress of Britain*, after completing their present trans-Atlantic trips, will be withdrawn from the service, and reassigned for the winter for cruises in the Mediterranean and to the West Indies, respectively.

The s.s. *Empress of Britain* will be given her annual overhaul at Liverpool, Eng., following which she will make winter cruises to the West Indies. She will resume her place in the trans-Atlantic service next spring as the *Montroyal*.

The company has assigned 4 ships for

the Christmas sailings from St. John, N.B., leaving that port Dec. 7, 13, 14 and 15, respectively. The *Montclare*, Dec. 7, will go to Liverpool; the *Melita*, Dec. 13, to Cherbourg, Southampton and Antwerp; the *Montcalm*, Dec. 14, to Liverpool, and the *Marloch*, Dec. 15, to Belfast and Glasgow. The company's ships, in addition to its Christmas sailings, will make 32 round voyages from St. John during the 1923-24 season.

Capt. S. Robinson, R.N.R., who was in command of the s.s. *Empress of Australia* at Yokohama, during the earthquake, has been appointed commander of the s.s. *Empress of Canada*, for a cruise round the world, starting from Vancouver, B.C., Jan. 4, 1924, via the Panama Canal to New York, and leaving there Jan. 25 for the 25,000 miles cruise. Capt. A. J. Hailey, R.N.R., of the *Empress of Canada*, succeeds Capt. Robinson on the *Empress of Australia*.

Hamilton-Toronto-Montreal-Vancouver Water Route.

The s.s. *Margaret Coughlan* arrived in Montreal, Nov. 17, with a large and varied cargo from Vancouver, after having discharged 2,000,000 ft. of lumber at Corner Brook, Nfld., for the Newfoundland Pulp & Paper Co.'s pulp mill under construction there. The *Margaret Coughlan* was expected to leave Montreal by Nov. 30, on another trip to Vancouver, via the Panama Canal.

The *Kirkwood Line* s.s. *J. H. Plummer* arrived in Hamilton, Nov. 13, and took on a considerable quantity of general cargo for Vancouver. She loaded further tonnage at Toronto, sailing for Montreal Nov. 20, where she completed loading, and sailed for Vancouver, via the Panama Canal, Nov. 25.

The s.s. *Mariska*, which, as mentioned in Canadian Railway and Marine World for September, was sold by order of the Supreme Court of Ontario, under a trust deed made by the owner, the Transatlantic Steamship Co., and bought by the Minto Trading Co., Montreal, has been renamed *Kamaris*. She has been cut in two by Canadian Vickers Ltd., Montreal, and a new 48 ft. section has been added. In addition to this, she has been thoroughly overhauled and repaired, and alterations made to her derrick and miscellaneous machinery, as well as being refitted for lake service. This work was completed Sept. 21, and arrangements were made for her to be towed in two sections through the St. Lawrence and Welland Canals to Buffalo, to be rejoined there. **J. W. Norcross**, Vice President and General Manager, Canada Steamship Lines, Ltd., is acting as owner's agent, and the repair and removal operations were carried out under the supervision of **J. F. M. Stewart**, Toronto.

Vancouver Grain Shipments.—It is reported that, during October, 2,289,180 bush. of grain were shipped through Vancouver to United Kingdom and other European ports, and 89,932 bush. to the Orient, a total of 2,379,112 bush. During the first two months of the crop year beginning Sept. 1, 2,408,364 bush. were shipped through Vancouver, of which 2,318,432 were consigned to the U.K. and other European ports, and 89,932 to the Orient. This compares with a total of 1,058,967 bush. shipped during the first two months of the 1922-23 crop year, of which 989,055 were consigned to U.K. and European ports, and 69,912 to the Orient.

Atlantic and Pacific Oceans.

The Montreal & St. Lawrence Stevedoring Co. announced recently that it had loaded the s.s. *Ethelfreda* with 7,366 tons of grain at Montreal in 11 hours, which was claimed to be a record loading for that port.

The s.s. *Loyalist*, owned in Bombay, India, which is reported by Lloyds to have been scrapped for breaking up, was formerly the *Empress of India*, one of the ships built at Barrow-in-Furness in 1891, for the C.P.R. trans-Pacific route.

The Cairn-Thompson Line, which has for years operated a steamship in the fruit trade between Mediterranean ports and Montreal, put on a second one this year. The *Scatwell* arrived in Montreal, Oct. 30, and the *Cairntorr* arrived Nov. 7.

International Transportation Services, Ltd., dispatched the Norwegian s.s. *John Ludev Mowinkel*, 4,400 tons, recently with a large cargo from Montreal to ports in Colombia, South America, with a view to establishment of a regular service with Canada.

The Red Star Line will, a London, Eng., cable states, inaugurate a new service, Dec. 28, with the s.s. *Lapland*, between Antwerp and New York, calling at Southampton, Eng., Cherbourg, France, and Halifax, N.S. The s.s. *Belgenland* will be the second ship on the route.

Furness-Withy Co. has, it is reported, arranged that two of the French Line steamships will call at Halifax, N.S., on the route between Bordeaux, France, and New York. The first is due at Halifax, Dec. 3, and a monthly service will be maintained, the last for the season being due April 27.

The Royal Mail Steam Packet Co. will, it is reported, make Halifax, N.S., a port of call for its steamships westward bound from Hamburg, Germany; Southampton, Eng., and Cherbourg, France, to New York. The first steamship scheduled to call at Halifax is the *Ohio*, 18,940 tons, on Feb. 14, 1924.

The s.s. *Princess Margaret*, owned formerly by the C.P.R., and which was converted into a mine layer during the war, was, a press report states, used on Nov. 4 to convey the premiers of the British overseas dominions from Portsmouth to Spithead, where they reviewed the Atlantic fleet. (Press report.)

McLean, Kennedy, Ltd., Montreal, representing the Scandinavian-American Line, which began the operation of a direct freight service between Scandinavian ports and Montreal in May, announced that the service will be continued fortnightly during the winter, St. John, N.B., being the Canadian port.

The question of improved shipping facilities between Canada and the West Indies is reported to have been the subject of a conference between Hon. G. P. Graham, Dominion Minister of Railways and Canals, and Royal Mail Steam Packet Co. officials in London, Eng., Nov. 6. It is said that the company proposes to increase its services, and is asking for a further subsidy from Canada.

The London, Eng., Times stated recently that a considerable number of British ships had been chartered to load grain on the Pacific coast for European ports and are making the outward trip in ballast. A Vancouver report states that space has been taken for a large tonnage of grain both for U.K. and Oriental ports, and that it is expected the shipments of grain for the season will reach 60,000,000 bush.

The Dollar Line has arranged that the first sailing of its round the world service will be that of the *President Harrison*, leaving San Francisco Jan. 5, 1924, and the first sailing from New York will be that of *President Adams*, Feb. 7. Steamships will leave New York fortnightly, and the entire trip will be made in about three months. The ports of call are: New York, Havana, Colon, Balboa, Los Angeles, San Francisco, Honolulu, Kobe, Shanghai, Hong Kong, Manila, Singapore, Penang, Colombo, Suez, Port Said, Alexandria, Naples, Genoa, Marseilles, Boston.

The Master of the Ontario Supreme Court, Toronto, has approved an application from the Home Bank's liquidator to have the s.s. *Vaudreuil*, owned by the British Dominion Holding & Investment Corporation, sold to satisfy a lien held by the bank. The reserve price is fixed at £5,000, and a commission of 5%. The *Vaudreuil* of Montreal was built at Cleveland, Ohio, 1889, and rebuilt at Lauzon, Que., in 1919, being named *Frontenac*. Her dimensions are: length, 278 ft.; breadth, 40 ft.; depth, 20.3 ft.; tonnage, gross, 2,514 tons; register, 1,436 tons; screw driven, by engine of 136 h.p.

A Kingston, Jamaica, press report stated recently that the Government was preparing a dispatch to the Canadian Government claiming that the arrangement for a fortnightly steamship between Canada and Jamaica is not being observed in the manner expected, and asking for more suitable steamships. The Jamaica Imperial Association is reported to have advised the island's representative at the Imperial Economic Conference in London, Eng., that with regard to St. John, N.B., the present Canadian service is adequate for transportation of general cargoes, and that it is questionable whether there is necessity for a fruit or an increased passenger service.

Maritime Provinces and Newfoundland.

Premier Veniot, of New Brunswick, is reported to have stated that the Dominion Government has taken over more than 30 of the wharves and tidal waters in the province.

The Marine and Fisheries Department has authorized the changing of the name of the s.s. *Princess*, registered at Sydney, N.S., and owned by J. A. Young and T. Burchell, to that of *Lake View*.

The Port Hawkesbury Marine Ry., Port Hawkesbury, N.S., is reported to have been reopened after reconstruction and to have 2 cradles, on which ships up to 1,000 tons capacity can be docked and repaired.

The s.s. *Petrel*, which was sold out of the Dominion Government service some time ago, and was recently sold under Admiralty Court order for wages, is being repaired at Burns & Kelleher's yard, Halifax, N.S.

The 3-masted schooner *A.* and *W. Ogilvie*, timber laden, bound from Burlington, N.S., for Boston, Mass., which went ashore at Lorneville, N.B., has been towed to St. Martins, N.B., to discharge cargo, prior to being repaired.

St. John, N.B., longshoremen were reported, Nov. 17, to have asked for increased wages. The Labor Department, on Nov. 19, authorized the establishment of a board of conciliation and investigation, for which the employees had asked.

The Dominion Government s.s. *Aberdeen* is reported to have been abandoned

as a total loss on Seal Island, N.S., the cost of salvaging being estimated to be in excess of her value. She is being replaced in the lighthouse service by the *Dollard*.

The Dorothy L. Bell, a 70-ton auxiliary schooner, which was launched at Shelburne, N.S., Oct. 9, was destroyed by fire on her first trip on Nov. 3, through the engine backfiring and the following explosion of the oil tank. The crew got in the boat, and rowed to Lockport, N.S.

Judge Stewart, in the Admiralty Court at Charlottetown, P.E.I., gave judgment recently for \$600 in favor of C. W. Hanley, St. Stephen, N.B., and against the schooner *Ralph S. Parsons*, which was chartered for a voyage to England and was outfitted for the trip by the plaintiff to the value of the claim.

The St. John Drydock & Shipbuilding Co. has been given a contract by the Dominion Public Works Department, for dredging at the deep water berths, and the Canadian National Ry. long wharf, at St. John, N.B., the amount of material to be moved being approximately 120,000 cu. yd, scow measure, at 31c.

The s.s. *Strandhill*, chartered by Beazley Bros., Halifax, N.S., to salvage the guns, anchors and chains from H.M.S. *Raleigh*, which was wrecked on Amour Point, Belle Isle Strait, Aug. 8, 1922, returned to Halifax recently, having accomplished the work. The guns were shipped to England by the *Furness* s.s. *Digby*.

The St. John, N.B., City Council, on Nov. 15, provided \$350 additional for fitting up of the new steam ferry for the Lancaster-Indiantown service, a similar amount having been provided by Lancaster Municipality. The ferry is said to have cost about double the contract price, the city having provided altogether \$2,850.

The tern schooner *Jean Dundonald Duff*, 404 tons, which was one of the few remaining oceangoing schooners owned in Newfoundland, is reported to have been abandoned at sea while on a voyage from Glasgow, Scotland, to St. John's, Nfld., and her crew is said to have been taken off by the s.s. *Arawa*, and landed at Colon, Panama. The schooner was burned by the rescuing steamship so as to prevent her becoming a menace to navigation.

The Digby Steamship Co. is reported to have bought the s.s. *Ruby L.*, to replace the s.s. *Centreville*, which has been sold. The company also operates the s.s. *Ruby L. II*, between St. John, N.B., and Nova Scotia ports. The *Ruby L.* was built at Margaretsville, N.S., 1907, and was owned formerly by Margaretsville Steamship Co., her dimensions being: Length, 90 ft.; breadth, 20.4 ft.; depth, 8.6 ft.; tonnage: gross, 119; register, 51; engines, 16 2/3 h.p.; screw driven.

Connors Brothers, Ltd., business at Black's Harbor, N.B., including its steamships and canning plants, is reported to have been sold to a company which will enlarge the plant and equipment, and of which P. W. Connors will be a leading member. Lewis Connors, a member of the company, is interested in the promotion of the Canadian Terminal Ry. Co., which proposes to build a railway from Pennfold, on the C.P.R., to link up and develop the harbors of Blacks, Deadmans, Beaver and L'Etang, N.B.

The s.s. *St. George*, built at Birkenhead in 1906, was operated for several years by the C.P.R. between St. John, N.B., and Digby, N.S. After being used

on scouting service between Halifax and Bermuda in the early war days, she was taken to England, and lost sight of until 1919, when she was sold to the Great Eastern Ry. and was put on the Harwich-Amsterdam run. She is now reported to have been chartered by the Scientific Expeditionary Research Association of England for a 10 months' expedition to the South Seas.

Capt. T. J. Craig, Kinrose, P.E.I., is reported to be negotiating for the purchase of the sidewheel s.s. D. J. Purdy, on behalf of a syndicate which proposes to conduct a new passenger and freight service between ports on Northumberland Strait. The D. J. Purdy, formerly the Sincennes, of Montreal, is owned by the Crystall Stream Steamship Co., St. John, N.B., and was built at Montreal in 1893, her dimensions being: Length, 142.2 ft.; breadth, 24.4 ft.; depth of hold, 8.4 ft.; tonnage: gross, 500; register, 315; engines, 34 h.p.

Province of Quebec.

The George Hall Coal & Shipping Corporation's coal barge bunkering the s.s. Minnedosa at shed 7, Montreal, settled and sank in 28 ft. of water, Nov. 19.

The Montreal Harbor Commissioners took a party of newspaper men round the harbor on Nov. 15, to show them the improvements made during the year.

The Dominion Government s.s. Archie was moored in the inner Louise Basin, Quebec, Oct. 30, following her return from the Arctic Ocean, under Capt. Joseph Bernier.

The Dominion Government has, it is reported, completed arrangements to take over the wharf at St. Petronille, Island of Orleans, from which a ferry service is operated by Le Compagnie Maritime, to Quebec.

A schooner is reported to have been burned in the St. Lawrence River, off Cape Salmon, Que., about the middle of November, the crew having apparently got to land. The name of the schooner has not been reported.

The St. Lawrence Transportation Co. entered an action in the Admiralty Court, Quebec, Nov. 16, to recover \$400 damages to a lighter alleged to have been caused by a schooner releasing it from its moorings in Quebec, in consequence of which it ran ashore and was damaged.

The George Hall Coal & Shipping Corporation was sued in the Quebec Superior Court recently by A. Gamache, under the Workmen's Compensation Act, for damages due to injuries received to his hand while oiling the steering gear on the s.s. Senator Derbyshire, June 6. Mr. Justice Coderre awarded plaintiff \$300.

Mr. Justice MacLennan, in the Admiralty Court at Montreal, Nov. 18, reserved judgment in an action brought by the George Hall Coal & Shipping Corporation, Montreal, owners of the s.s. A. D. MacTier, against the owners of the s.s. Fifetown, to recover damages resulting from a collision between the two ships in Soulages Canal, Oct. 2.

Marine Department engineers were reported to have arrived at Three Rivers, Que., Oct. 31, to study the river situation. It is suggested that a new channel be opened off the city, on the south side of the river to replace the present one, which is only a few hundred feet from the wharves. It is claimed that there is danger to ships moored at the wharves from the use of the channel.

The steamship St. Croix, operating

between Quebec City and points in Lotbiniere county, went ashore near St. Antoine de Telly, a few minutes after leaving the wharf. The passengers were taken off, and a part of the cargo removed to enable her to be refloated. The damage to the hull is reported to be comparatively slight, and she was expected to be again on the route in about a week.

Petrel Steamships, Limited, has been incorporated under the Dominion Companies Act, with authorized capital of \$50,000 and office in Montreal, to buy and sell ships; to carry on business as shipowner and common carrier within and without the Dominion; to carry on towing, wrecking and salvage and a number of other businesses connected with transportation. The incorporators are R. Chenevert, L. Barry, M. Bernfield, F. J. Hyde and H. Scott, Montreal.

Capt. L. A. Demers, Dominion Wreck Commissioner, opened an investigation no Nov. 20 into the collision between the George Hall Coal & Shipping Corporation's s.s. John B. Ketchum and the Canada Steamship Lines s.s. Cataract near Dickenson's Landing, Nov. 8. On Nov. 21, he held an investigation at Quebec into the stranding of the s.s. General Milne at Cap La Roche, and on Nov. 22, he held another into the collision between the motor ship Steel Motor, and the barges Dunmore and Melrose, which were being towed by the tug Virginia in the Soulages Canal, Nov. 9.

Ontario and the Great Lakes.

The name of the Toronto Fire Department's tug City of Toronto has been changed to Charles A. Reed.

The Canada Steamship Lines' s.s. Turbinia is to be reconditioned, and placed on a passenger route out of Toronto, next year.

The United States Lighthouse Department will withdraw buoys and other aids to navigation on Lake Ontario and the St. Lawrence River, Dec. 1.

General navigation on the Great Lakes and the St. Lawrence River to Montreal, is expected to close Dec. 15. The Sault Ste. Marie canals locks will close on Dec. 14.

The Public Works Department has given the Port Arthur Construction Co. a contract for the reconstruction of the east pier of the eastern channel, Toronto harbor.

The Booth Fish Co.'s plant at Wiarton, Ont., was considerably damaged by fire, Oct. 28. The tug Sailor Queen, which was lying at the wharf, was burned to the water's edge.

The harbor at the Main Duck Island, near Prescott, Ont., is reported to have been dredged to a depth of from 10 to 12 ft. by C. W. Cole, thus providing better protection for ships.

Navigation on the Welland Canal was delayed for about 12 hours to 2 a.m., Nov. 20, owing to the gates at lock 18 being carried away by the Great Lakes Transportation Co.'s s.s. Glenburnie.

The Great Lakes Transportation Co.'s s.s. Glenclova, while landing a pilot at Prescott, Ont., Nov. 19, in order to avoid colliding with a barge, ran into the east side of the Buckley wharf, doing it considerable damage.

A serious landslide on the Welland Canal between locks 22 and 23, was reported from St. Catharines, Ont., Nov. 15, holding up navigation for two or three days. This is the third landslide

that has taken place at this point during the present season.

The s.s. Joyland, owned by Aube Steamship Co., Montreal, and laden with wheat, went ashore in Coteau Lake, half a mile below Cornwall, Ont., Nov. 6. She was lightered and got off, without material damage, the cargo was reloaded, and she proceeded Nov. 8.

The Department of Marine and Fisheries received tenders to Nov. 13, for towing, docking, repairs, renewals and painting the tug Hercules, and steel hopper scows 14 and 15, which have been used as tenders to Dredge P.W.D. 109, working in Goderich harbor.

In connection with the arrangement made between the British and the U.S. Governments that the latter may search British ships for alcoholic beverages within 12 miles of the U.S. coast, it has been asked whether the authority will extend to the Great Lakes.

The George Hall Coal & Shipping Corporation, Montreal, is stated in a press report to be about to scrap all its wooden ships, the s.s. Liberty and the barge Sherman having been laid up at Ogdensburg, N.Y., already for scrapping. Enquiry has failed to elicit official confirmation of the report.

The s.s. Glenellah ran aground in the aqueduct, Welland Canal, Oct. 30, and later in the day the s.s. Edward L. Strong also went aground, and the s.s. Metcalfe went aground Nov. 3. These groundings are reported to have been caused by low water, there being only 12 ft. reported Oct. 30, and 13 ft. Nov. 3. During the night of Nov. 3, the water rose to 14½ ft.

D. S. Pratt, General Manager, Canadian Dredging Co., Midland, was in Port Arthur recently completing arrangements for carrying out the contract for the construction of a section of a rubble mound breakwater for the Public Works Department. The company's plant and equipment for the work is reported to have been nearly all arrived at Port Arthur.

The s.s. John B. Ketchum 2nd, owned by the Geo. Hall Coal & Shipping Corporation, Montreal, bound from Montreal to Toledo, Ohio, and the Canada Steamship Lines s.s. Cataract, collided in the Cornwall Canal, Nov. 8. The John B. Ketchum 2nd was damaged seriously above the water line, but proceeded to Ogdensburg, N.Y. She subsequently steamed to Montreal, where repairs will be made.

The Hamilton Harbor Commission's development plans are reported to call for an expenditure of \$500,000. W. Ainslie, Chairman, has been in Ottawa, discussing the matter with the Marine Department, with a view of obtaining \$200,000 towards the cost of the work. The commission proposes to ask Hamilton City Council also to provide \$200,000, leaving \$100,000 to be financed by the commission.

Hon. J. S. Martin, Minister of Agriculture for Ontario, is reported to have said, in speaking at Brantford recently, that the efforts to have Port Dover harbor put into proper condition are not to be given up, and that a deputation representing the municipalities served by the Lake Erie & Northern Ry., and the Grand River Ry., will go to Ottawa to bring the matter before the Dominion Government.

The North Bay Navigation Co. has been incorporated under the Ontario Companies Act, with authorized capital of \$40,000 and offices at North Bay, to

operate steamboats on Lake Nipissing; to own and operate docks or other works in connection therewith, and to acquire and operate an amusement park. The provisional directors are: F. A. York, J. W. Deagan, C. W. F. Brown, T. H. Noble, and E. L. Banner, all of North Bay.

The Canada Steamship Lines s.s. Edmonton, bound from Montreal for upper lake ports, while in the Darcy Lake level of the Cornwall Canal, Nov. 2, collided with the Mapes-Ferdon Steamship Co.'s s.s. Pabjune, bound to Montreal. The latter sustained but slight damage and proceeded, while the Edmonton put into Prescott, where temporary repairs were made, and she proceeded Nov. 3 to Toronto, where her cargo was transferred to another ship, and she went to Kingston for permanent repairs.

The Detroit and Cleveland Navigation Co.'s new steamship, Greater Buffalo, was launched at the American Steamship Co.'s yard, Lorain, Ohio, Oct. 27. She is of practically the same dimensions as the Greater Detroit, launched in September; approximately 550 ft. long by 100 ft. wide. She will have accommodation for 1,200 passengers, besides a crew of 300, also space for 1,000 tons of express freight, and automobiles. The two new ships will be ready for the run from Buffalo to Detroit, with the opening of the 1924 navigation season.

The Border Transit Co.'s s.s. Wesee, bound from Sandwich, Ont., to Cleveland, Ohio, to load coal, caught fire and was totally destroyed, Nov. 11, her crew taking refuge on Middle Sister Island, whence they were rescued by the s.s. Conneaut, and landed at Port Clinton, Ont., Nov. 12. The Wesee was built at Green Bay, Wis., 1901, her dimensions being: Length, 265.5 ft.; breadth, 42 ft.; depth, 22.7 ft. Tonnage: gross, 1,829; register, 1,062. She was screw driven, with engines of 99 h.p. Her registered owners are: R. Massey and W. M. Gatfield, Sandwich, Ont.

The Canada Steamship Lines' s.s. Mapledawn left Collingwood, Oct. 21, for the head of the lakes, having been completed by the Collingwood Shipbuilding Co. She was originally the Manota, owned by the Minnesota Steamship Co., and was acquired by the United States Shipping Board for ocean service. She was cut in two for passage down the canals, but the bow section was lost while being towed across the lake. A new bow was built to the original stern in 1920 at Levis, Que., and she was acquired by Canada Steamship Lines. For transfer to the upper lakes, she was towed to Collingwood, where, as stated in Canadian Railway and Marine World for August, she was cut in two and a new 36 ft. section was added.

International Waterways Navigation Ltd., Montreal, has bought the steel steamship Jolly Inez, from Walford Lines, Ltd., London, Eng. She was built at Sunderland, Eng., 1896, her dimensions being: Length, 253 ft.; breadth, 44 ft.; depth of hold, 19.7 ft.; tonnage: gross, 1,850; tons net, 1,150. She has engines of 203 h.p. She was originally named Vickerstown, was subsequently renamed Turret Chief, and was given her present name in 1915 to conform with the other Walford Lines' ships. She has capacity for 120,000 bush. of grain, and is being operated in the grain trade on the upper lakes, Elmer Winter being captain and Wm. Keith chief engineer. The company's two other ships, Aragon and Westorian, are in the Port Colborne-Montreal trade.

Manitoba, Saskatchewan, Alberta and Northwest Territories

The motor boat Canadusa brought out to Waterways, Alta., recently, officials, traffic representatives and crews of a number of steamboats operating in the Athabasca and Slave Lake navigation, the party reaching Edmonton, Alta., by the Alberta & Great Waterways Ry.

The Hudson's Bay Co.'s motor boat Weenusk was reported recently to have completed her 19th round trip between Hudson Hope and Fort Vermillion, via Peace River town, making a total of about 12,000 miles for the season. It was expected she would make another round trip before she was laid up for the winter at Hudson Hope.

Capt. Moore is reported to have bought the steamboat Fort Norman, and to be going to add 25 ft. to her length during the winter. She will be fitted to carry freight and passengers, and equipped to tow coal barges from Hudson Hope to Peace River, Alta. The only steamboat of this name on these waters in the Canadian Register is a scow owned by the Hudson's Bay Co.

The Hudson's Bay Co.'s auxiliary schooner, Lac du Bruchet, built at Edmonton, Alta., for trading on Reindeer Lake, Sask., will leave Edmonton early in December, en route to her trading station. She will be shipped to Prince Albert, Sask., and then will be hauled overland by teams to Reindeer Lake, about 600 miles. Her dimensions are: Length, 40 ft.; width, 10 ft.; moulded depth of 6 ft. She will draw 3 ft. of water. She is fitted with two 27 ft. masts, is schooner rigged, and has a 9-12 universal engine. She has a capacity for 10 tons of cargo, with accommodation for the crew.

British Columbia and Pacific Coast.

The Grand Trunk Pacific Coast Steamship Co.'s s.s. Prince Albert has been sold to Western Freighters, Ltd.

The Public Works Department received tenders to Nov. 26 for the construction of a new hull and house for a snagboat for the Fraser River, B.C.

G. Dicks and S. Pierce, Prince Rupert, B.C., have been granted permission by the Marine Department to change the name of the s.s. Eagle, registered at Prince Rupert.

The Hudson's Bay Co.'s s.s. Baychimo arrived in Vancouver, B.C., Nov. 4, from the Siberian coast with passengers and a cargo of furs reported to be valued at about \$1,000,000.

The Somerville Cannery Co. is reported to have bought the auxiliary schooner Laurie Whalen, now undergoing repairs by the Victoria Machinery Depot at Victoria, for a cannery tender.

The C.P.R. s.s. Princess Patricia, inward bound to Vancouver, collided with the tug Ocean Plunger, outward bound, in a dense fog, in the narrows, Oct. 26. Neither ship suffered serious damage.

The Vancouver Harbor Commissioners are reported to be going to ask the Dominion Government for a further loan of \$5,000,000 for the extension and improvement of the port facilities.

The C.P.R. coast steamship Princess Charlotte, after having repairs to her propeller completed by Yarrows Ltd. on Nov. 2, underwent a general overhaul at her dock in the inner harbor, at Victoria.

The Dominion Government wireless

direction finding station at Pachena Point is reported to have been opened, Nov. 14; to be in charge of three operators and that a 24-hour service will be given.

Thomas Harling and Son, steamship agents, Montreal, are opening a branch office at Vancouver, B.C., under the title of Harling, Son and Stevenson, Ltd., and in charge of H. A. Stevenson of Vancouver.

The C.P.R. British Columbia Coast Service steamships Princess Alice and Princess Louise will, it is reported, make 18 trips to Alaskan ports during next summer, starting June 7, and ending Sept. 10.

The Puget Sound Navigation Co. is reported to be about to build a ferry slip in the inner harbor, Victoria, B.C., for use in connection with the operation of the ferry Sioux on the Port Angeles-Victoria run.

The C.P.R. s.s. Charmer dropped her propeller in the Gulf of Georgia, Oct. 22, and was hauled out on the Victoria Machinery Depot's marine ways, Oct. 23, to have a new propeller fixed. She resumed her run Oct. 27.

The Hudson's Bay Co.'s power schooner Ruby returned to Seattle, Wash., recently from a supply trip to the company's posts on the Siberian coast. She sailed from Seattle May 10, and from Vancouver May 19, outward bound.

A Seattle, Wash., press report credits the Governor of Alaska with stating that the C.P.R. British Columbia Coast Service may extend its steamship services up the Tanana River so as to connect with the Alaska Rd. at Nenana, Alaska. The steamboats will, it is stated, link up the Alaska Rd. with Dawson, Yukon, via the Tanana and Yukon Rivers.

The Puget Sound Navigation Co.'s steam ferry Sioux, which is operating between Port Townsend and Seattle, Wash., will, a press report says, be transferred to the Port Angeles, Wash.-Victoria, B.C., run early in 1924, after having been cut in two and lengthened, so as to increase her capacity from 15 cars to about 40, and to carry 400 passengers.

The Vancouver-Courtenay Transportation Co. has been incorporated under the British Columbia Companies' Act, with authorized capital of \$125,000 and office at Vancouver, to acquire and operate steamships, tugs, sailing ships, barges, scows, lighters and other craft, upon ocean, seas, sounds, waters, rivers and canals for transportation of freight and passengers.

The Marine Department is reported to have arranged to station one of the fishery patrol ships, Givenchy or Thiepval, in Barkley Sound during the winter, to render aid to vessels in distress off that section of the coast. It is said that the life saving appliances will be added to, and that tenders are being invited for clearing trails and building bridges to make sure connections between the coast and the Banfield station.

The Pacific Great Eastern Ry. is reported to have bought the tug Point Ellice, to operate the railway barge service between North Vancouver and Squamish dock. Since the loss of the tug Clinton, about a year ago, the railway has been chartering tugs for this service. The Point Ellice was built at North Vancouver 1911, was owned by the Dominion Government, and operated under the Public Works Department. Her length is 95.8 ft.; breadth, 20.1 ft.; depth, 11.6 ft.; tonnage: gross, 205;

registered, 98; screw driven; engines 47 h.p.

The Union Steamship Co. of B.C. is reported to have bought the steamboat Lady Evelyn from Howe Sound Navigation Co., and to be going to operate her in the Powell River service. The Lady Evelyn is a steel twin screw steamboat of 483 gross tons, and 39 tons register, built and engined at Tramere, Birkenhead, Eng., in 1901. Her dimensions are: Length, 189 ft.; breadth, 26.1 ft.; depth of hold, 9.5 ft.; draught, 8 ft. 6 in. She is fitted with triple expansion engines, cylinders 16, 24 and 38 in. diameter, by 24 in. stroke; steam being supplied by 2 return tubular boilers at 160 lb. pressure. She is capable of making 16 knots on forced draught. Originally named the Deerhound, she was operated by West Cornwall Steamship Co., on a freight and passenger route between Penzance, Cornwall, and the Scilly Isles, from 1901 to May, 1907, when she was bought by the Dominion Post Office Department, and used as a mail tender at Rimouski, on the St. Lawrence, being renamed the Lady Evelyn, and registered at Quebec. In 1922 she was sold to Howe Sound Navigation Co., and her port of registry changed to Vancouver. During the last two years she has been used in freight and passenger service along the B.C. coast. Prior to being put on her new run, she will be converted into an oil burner. An illustration of the Lady Evelyn was given in Canadian Railway and Marine World for June, 1907, pg. 437.

The World's Largest Drydock Opened at St. John, N.B.

(Continued from page 606.)

ed to the toast of "Our Railways," but so much time had been occupied by some of the local speakers that, as the tide was beginning to ebb, the programme had to be cut short, so that the Governor General might leave to open the drydock. At about 3 p.m. the Norwegian steamship Kong Shavn, which had gone ashore at Brier Island in the Bay of Fundy, a few days before, being badly damaged, entered the dock under her own steam, assisted by tugs, the Governor General, in a brief speech, declaring the dock open. In the evening the St. John Drydock & Shipbuilding Co.'s staff gave a ball in Pythian Hall, the guests being received by Frank M. Ross, General Manager, and Mrs. Ross, and the whole affair being most enjoyable.

On Oct. 30, a number of the company's guests were taken round St. John harbor and Courtenay Bay on the company's wrecking tug, Ocean Eagle, and at 3.30 p.m., those who had gone from Montreal on the special train, left on it on their return, reaching Montreal early on Oct. 31, and dispersing there.

St. Lawrence River Insurance Rates.—The question of marine insurance rates on the St. Lawrence route is again arousing discussion in both England and Canada. Alex. Johnston, Deputy Minister of Marine, suggested recently the possibility of a Canadian marine insurance department under government direction, and the London Times has expressed the opinion that British underwriters are not likely to remove any discrimination alleged to exist against the St. Lawrence waterway.

The motorized barge, Twin Ports, is reported to have reached New York, Nov. 5, with the first unbroken freight shipment carried by the all water route from the head of the Great Lakes.

Customs Duties on Canadian Goods Sent via Panama Canal.

The question of trade between eastern and western Canada has assumed new phases since the opening of the Panama Canal, and the great development that has been made in the facilities for handling cargoes at Vancouver and Victoria, B.C. The making of direct shipments from Vancouver to Europe via the canal was followed by the making of shipments of freight from Canada to New York for transshipment to ships travelling via the canal to Pacific coast ports, and finally reaching Vancouver. This traffic brought from the Canadian Customs Department a decision that such freight was subject to duty on re-entering Canada, and a demand was made for the establishment of a Canadian customs office at New York to facilitate the trade. The Minister of Customs, when in Vancouver on Nov. 1, heard arguments from the Board of Trade in favor of the establishment of such an office, and was reported to have stated in Winnipeg on Nov. 15, on his way back, his willingness to recommend the appointment of a customs officer to deal with shipments by water between Canadian Atlantic and Pacific ports, where bulk is broken at New York. The British Columbia Legislature passed a resolution on Nov. 14, proposed by the Premier, and supported by the leader of the opposition, asking for the appointment of a customs officer at New York; that the imposition of duties upon the produce or manufactures of any province destined to any other province, no matter by what route transported or where transhipped, be discontinued; and that the B.C. Government take proper steps to resist such imposition of duties by the Dominion Government.

The s.s. Glenstriven, owned by Great Lakes Transportation Co., while grain-laden and bound from Fort William to Midland, Ont., went ashore on the southwest shoal, off Cove Island, at the head of Bruce peninsula, Georgian Bay, Nov. 16, during a fog, and on the following day was reported to be full of water. The crew reached Tobermory, 5 miles away, safely. The tugs Murray Stewart and Keenan made an unsuccessful attempt, on Nov. 17, to tow the Glenstriven off, and on the following day anything of value was removed from her by the tug Lucknow. The wrecking tug Manistique left Sarnia to endeavor to salvage the ship. The Glenstriven was built at Buffalo, N.Y., 1889, and was formerly called the America, her dimensions being: Length, 274 ft.; breadth, 42.2 ft.; depth, 20.5 ft.; tonnage, gross, 2,155 tons; register, 1,585 tons; screw driven by engines of 114 h.p. An Owen Sound press dispatch of Nov. 22 stated that it was thought possible that the ship might be refloated, the weather being more favorable for lightering and salvaging operations. A Cleveland, Ohio, press dispatch of Nov. 23 said that the underwriters had given the Reid Towing & Wrecking Co. a contract for releasing the ship and taking her to Collingwood, on the no cure, no pay, basis.

The American Marine Conference at New York, Nov. 8, is reported to have passed a resolution calling upon the U.S. Shipping Board and the Emergency Fleet Corporation to retire without delay from operating ships, and to place their operation in private hands.

Handling the Wheat Crop on the Lakes.

On Oct. 27, it was reported that stocks of grain in elevators at Fort William and Port Arthur, Ont., were 28,717,448 bush., against 35,238,001 at same date in 1922. Shipments out were reported comparatively light, but a heavy movement began Oct. 30, when 32 steamships, with 3,478,000 bush., were reported to have sailed for lower lake ports. Among the ships in the business are the Canadian Government Merchant Marine's Canadian Adventurer, Canadian Trader, Canadian Sower, Canadian Sailor, Canadian Signaller, Canadian Warrior, Canadian Engineer and Canadian Pathfinder. There are also 4 Norwegian steamships, Vesla, Lisen, Agga and Otto Sindling, the first two of which have been taking cargoes to Montreal and Buffalo, and the latter two sailed Nov. 12 for overseas. They each have a capacity of 65,000 bush. to Montreal, where they were to take on another 10,000 bush. each. The tramp steamships John Shaw and Itororo, the first named of which went to the upper lakes from South America, also cleared for New York. Shipments have continued heavy since the beginning of November, and it was reported Nov. 16 that rates from Fort William and Port Arthur to Georgian Bay ports were 2½c to 3c a bushel, against 5c and 6c a year ago; and on Nov. 18, that rates to Buffalo were 2¼c, and to Georgian Bay ports 2½c. It was reported from Port Arthur, Nov. 18, that several ships had been loaded for Buffalo at 4c a bush., freight and winter storage.

Assisted Passages for British Immigrants.—Dame Meriel Talbot, acting President, Society for the Overseas Settlement of British Women, London, Eng., is reported to have said recently: "If Canada wants to stimulate immigration, she might consider whether it would not be possible to make the conditions of transit more attractive financially." In this connection, a Canadian Immigration Department official is reported to have said that the Canadian Government was doing as much as it could be expected to do in the matter of assisted passages and that the comparison with Australia was scarcely fair. It was a practical certainty that a domestic servant going to Australia or New Zealand would remain in those countries for at least five years. They had not, as Canada had, to contend with the lure of higher wages presented by the United States. On that ground Canada could not be expected to assume an equal financial responsibility per head of her assisted immigrants. Since the Department started making advances to cover fares in July, the number of applicants had increased four-fold. In the majority of cases, full fare had been advanced.

Princess Beatrice-Camosun Collision.—Judgment was given by Mr. Justice Martin, in the British Columbia Superior Court, Nov. 9, in the action for damage brought by the C.P.R. against the Union Steamship Co. of B.C. The C.P.R. s.s. Princess Beatrice and the Union Steamship Co.'s s.s. Camosun collided in McKay Reach, west of Kingscombe Point, Jan. 20, both being damaged considerably. The C.P.R. sued for \$15,000 damages, and the Union Steamship Co. counter claimed for a similar amount. The actions went to trial some months ago, judgment being deferred. It was announced Nov. 9 that Mr. Justice Martin had dismissed the C.P.R.'s action and allowed the counter claim.

Mainly About Marine People.

Sir Montagu Allan, formerly of the Allan Steamship Line, Lady Allan and Miss Martha Allan, have been at Biarritz, and will spend the winter at Cannes.

Capt. J. Arseneau, of the schooner Marjorie Austin, died suddenly Nov. 8 while on board lying off Parrsboro, N.S.

Captain James Balcom, who died in Victoria, B.C., recently, was a native of Sheet Harbor, N.S., where he carried on shipbuilding, and also operated a number of ships in the West Indies trade. He retired from business about 20 years ago and moved to the Pacific coast.

J. R. Beck, District Passenger Agent, Canada Steamship Lines, Toronto, was married at Strathroy, Ont., on Nov. 21, to Miss Margaret Ramahan.

Wm. A. Black, President of Pickford & Black, ship owners and agents, etc., Halifax, N.S., is the Conservative candidate for the by-election in that constituency for the House of Commons, on Dec. 5.

Capt. C. E. Clarke, Harbor Master, Victoria, B.C., who underwent an operation at the Jubilee Hospital, Victoria, a short time before, was reported, on Nov. 12, as returning to the hospital for another operation.

Wm. P. Clyde, for many years President, Clyde Steamship Co., who retired in 1908, died in New York, Nov. 18, aged 84. He was a son of T. P. Clyde, who founded the line.

Capt. L. R. Demers, who died in Quebec, Nov. 4, aged 77, was for 12 years in command of the Canada Steamship Lines s.s. Quebec, and formerly in command of the Dominion Government's s.s. Druid.

Capt. Robert Dollar was the principal speaker at a dinner of marine men at Vancouver, B.C., Nov. 7, when he dealt with the development of business on the Pacific Ocean, since the opening of the Panama Canal.

Hon. Antonin Galipeault, Provincial Minister of Public Works, Quebec, Que., has been elected President, Levis Ferry Limited, to succeed Emile Tanguay, who died Nov. 6, and who was a practicing architect, and also the Quebec Government's chief architect.

Lt.-Col. F. Gourdeau, at one time Deputy Minister of Marine and Fisheries, who died in Ottawa Oct. 2, left an estate valued at \$20,429.41.

Wm. Hickman, who died at Bridgewater, Somerset, Eng., recently, aged 81, was the first agent appointed by the C.P.R. in England, in 1887, for shipping emigrants from England to Canada. The agency is still held by his son.

Capt. D. L. Jones, of the Royal Mail Steam Packet Co., arrived in Montreal, Oct. 29, from England on the steamship Ausonia, accompanied by his niece, and proceeded to Victoria, B.C.

John Thomas Kelly has been appointed Superintendent Engineer, Canadian Pacific Steamships Ltd. at Antwerp, Belgium, succeeding F. E. Hook, who has retired from the service, as mentioned in Canadian Railway and Marine World for November, having reached the age limit. Mr. Kelly joined the C.P.R. service in May, 1913, as Chief Engineer of the s.s. St. George, which was bought for the Bay of Fundy service. After the outbreak of war the ship was requisitioned by the British Government, went across the Atlantic and was used as a troop and hospital ship between the Eng-

lish and French ports, Mr. Kelly continuing as Chief Engineer until the ship was disposed of in Dec., 1919. His services were then utilized as acting Assistant Superintendent Engineer in London and Antwerp, until July, 1921, when he was appointed Chief Engineer of the ex-German s.s. Tirpitz, which was renamed the Empress of Australia, which position he held until the end of Jan., 1923, when he returned to England from the Pacific, and was employed relieving superintendent engineers until his present appointment.

Hon. E. Lapointe, Minister of Marine and Fisheries, returned to Ottawa early in November from a trip to the Pacific coast, during which he attended to official business, and made a number of political speeches.

Fraser Macdonald, St. Lawrence River pilot, Prescott, Ont., is retiring from active service, and will move to Buffalo, N.Y.

Dr. W. L. McDougald, President, Montreal Harbor Commission, and Mrs. McDougald, sailed from New York, Nov. 3, for Europe.

J. B. Metcalfe, European Traffic Agent, Canada Steamship Lines, returned to London, Eng., recently from Canada.

Capt. James Moore, who died at the house of his son, Capt. Edward Moore, at Amherst, N.S., Nov. 13, aged 103, is said to have been the oldest man in Cumberland County.

Lt.-Col. W. Grant Morden, formerly a member of the Canada Steamship Lines' advisory committee, in London, Eng., is a candidate at the pending general election, for re-election to represent Brentford and Chiswick in the British House of Commons.

Capt. A. J. Mulcahy, St. John, who has been acting as Lloyds Agent for New Brunswick, since the retirement of C. McLaughlan at the beginning of the year, has been appointed to the position.

Capt. Martin Murphy, formerly a Great Lakes mariner, died Nov. 6, aged 77, at Elgin, Ont., where he had lived in retirement for some years.

Capt. C. D. Neurotos, Marine Superintendent, C.P.R., British Columbia Coast Service, Victoria, is reported to be acting as Manager, during the absence of Capt. J. W. Troup in Great Britain.

F. J. Norsworthy, Joint Manager, White Star Line, Liverpool, Eng., arrived in Montreal Nov. 7, on a trip of inspection of the company's principal agencies in Canada and the United States.

Capt. E. J. O'Neill, a lake mariner, died at his home at Bridgeburg, Ont., Nov. 20, aged 54.

Capt. Parry, of the Canadian Pacific Ocean Steamships s.s. Montrose, is reported to be retiring.

Capt. G. Pyke, of the Pyke Towing & Salvage Co., Kingston, Ont., has, a press report states, been asked by a New York salvage company to salvage a gold laden steamship sunk off the Mexican coast in 1862, and it said that he will make the attempt during the winter of 1924-25.

Frank Russell, for many years associated with marine interests in Vancouver, B.C., is reported to have been appointed Manager of the Ballantyne pier there.

H. M. Ruttan, who was in the service of James Richardson & Sons, Ltd., ship owners and grain dealers, Kingston, Ont., for 41 years, latterly as Treasurer, died Nov. 17.

G. E. Tanguay, President, Quebec & Levis Ferry Co., who died at Quebec, Nov. 6, was a practicing architect, and also the Quebec Government's chief architect.

J. L. Weller, formerly Chief Engineer, Welland Ship Canal, now President, Concrete Pipe & Products Co., Hamilton, Ont., Mrs. Weller and their two daughters, have left to spend the winter at Pinehurst, North Carolina.

Halfdan Wilhelmsen, who is said to be the second largest individual ship owner in the world, died at Christiania, Norway, Nov. 18.

J. Wilkinson, Manager, Midland Shipbuilding Co., Midland, Ont., who went to St. John, N.B., for the opening of the St. John Drydock & Shipbuilding Company's drydock on Oct. 29, remained there to superintend the repairing of the Norwegian steamship Kong Shavn, which went ashore on Briar Island, in the Bay of Fundy, a few days before.

Mrs. Winter has applied to the British Columbia Supreme Court for letters of administration in connection with the estate of Capt. Winter, master of the Canadian Government Mercantile Marine s.s. Canadian Raider, who disappeared March 24, 1920.

The s.s. Kong Shavn Disaster.

The Norwegian s.s. M. H. Kong Shavn grounded on the southwest ledge of Brier Island, N.S., Oct. 25, but was refloated with the rising tide, leaking badly. The pumps were kept going, and she reached St. John, N.B., under her own steam the same evening, and on Oct. 29 was the first ship to enter the St. John Drydock & Shipbuilding Co.'s dock, where a survey was held by Capt. Halverson, New York, for the underwriters, and Capt. Johansen for the Norwegian Lloyds' Classification Society. The survey showed that to put her in condition 104 plates would have to be taken off the bottom, and replaced, 70 new plates being required for this purpose; about 120 floors and frames to be renewed and part of tank top to be dealt with; a new stern frame to be fitted, and rudder shafting to be examined from crank to tail shaft, and replaced; pumps, steering gear and seacocks to be overhauled; and hull painted to load water line. H. H. McLean, Norwegian Consul, with Capt. Locke of the Danish steamship Winniconnie, and Capt. Mulcahy held a court under the Norwegian law, Nov. 16, and made a declaration of facts relating to the stranding. The owners subsequently abandoned the ship to the underwriters, and it was decided to sell her by auction at St. John, on Nov. 22. The Kong Shavn was built in Japan in 1919, is screw driven by triple expansion engines, supplied by steam from 2 boilers by forced draft at 180 lb. pressure, and makes 9 knots on a coal consumption of 16 tons; she is 1,177 tons net, 2,032 tons gross; and has cargo carrying capacity of 3,050 tons with full bunkers, or 960 standards deal carrying capacity. Brier Island is the second island south of Digby Neck, in the Bay of Fundy, and west of the Nova Scotia mainland. It has a white group flashing light, and a diaphone horn for use in foggy weather.

A press report states that the Kong Shavn was sold to F. O. Carson, of the New Brunswick Iron & Wrecking Co., for \$13,900, subject to the underwriters' approval.

Sault Ste. Marie and Suez Canals Traffic Compared.

It is more or less generally known that the tonnage passing through the Canadian and U.S. canals at Sault Ste. Marie is greater than that passing through the Suez Canal, but the magnitude of the difference is not, we venture to say, fully realized. Statistics of the Suez Canal operation during the first 6 months of this year show that 2,336 ship passages were recorded, totalling 11,489,000 net tons, compared with 2,130 passages in the first half of 1922, totalling 10,087,000 net tons. Eastbound cargo through the Suez Canal in the first half of 1923 was 3,752,000 d.w. tons, and westbound cargo 7,533,000 d.w. tons, a total of 11,285,000 d.w. tons. The total for the same period in 1922 was 10,651,000 d.w. tons, the increase being accounted for in good part by the increased development in the Persian oil fields.

In May and June of this year there passed through the Canadian and U.S. Sault Ste. Marie canals 5,639 ships, with a net tonnage of 17,997,057. Eastbound freight cargo was 17,978,796 short tons, and westbound 6,416,402 short tons, a total east and westbound of 24,395,198 short tons. It will thus be seen that the traffic through the Sault Ste. Marie canals in May and June was greater than through the Suez Canal in the first 6 months of the year.

Statistics of Sault Ste. Marie canals traffic, given elsewhere in this issue, show that in October there were 3,319 ship passages, the net tonnage being 10,101,507, that eastbound freight was 10,531,375 short tons, westbound freight 2,471,302 short tons, and total freight 13,002,677 short tons. By comparing the figures with those for the Suez Canal as given above, it will be seen that in the single month of October more ships

passed through the Sault Ste. Marie canals than through the Suez Canal in the first half of the year; that the net tonnage of the ships was almost as great, and that the cargo tonnage passing through the Sault Ste. Marie canals in October was greater than that passing through the Suez Canal in the half year. Considerations of this nature are necessary for an adequate realization of the traffic through the Sault Ste. Marie canals, and the magnitude of the Great Lakes shipping industry.

Difficulties of Unloading Whiskey in Newfoundland.

A St. John's, Nfld., press dispatch of Nov. 5 told the following lurid story:—"The Canada Steamships s.s. Manoa got away from this port tonight for Montreal after almost a day's delay due to research activities by the longshoremen who were unloading her cargo, from Montreal, of 7,000 cases of whiskey. Some time after operations were started on this section of the cargo the laborers in the hold showed signs of a liveliness that could not at all be ascribed to fumes from the liquor. Symptoms of giddiness were also displayed on the deck and adjoining pier. Presently some Sherlock Holmes made the discovery that cases had fallen open and bottles uncorked and that the laborers were making frantic efforts to prevent waste. When some of the men started carrying goods into doors that did not exist, and others walked over sides of the pier, that were certainly there, it was decided to suspend operations. Longshoremen turned to on Sunday, but started right in on their salvage work again. Whiskey cases mysteriously opened and displayed their contents. The jingle of breaking bottles was heard on the Sabbath eve and the odor of Canadian rye tainted the air.

Again closure had to be applied and the unloading squad for the second time moved their tortuous ways homeward. The final instalment of the liquor was removed from the Manoa this morning. Agents for the ship do not anticipate difficulty in recruiting laborers for discharging cargo so long as Ontario continues forwarding consignments of old mellow rye here via Montreal."

Public Works Marine Contracts Awarded.

The Dominion Public Works Department has awarded contracts as follows: Sept. 24, construction of freight shed, office room and shelter on wharf, at Chicoutimi, Que., A. Pedneault, Chicoutimi, Que., \$13,555.70; Sept. 26, dredging on both sides of wharf at Berthier, Que., Lachance Limitee, Quebec, Que., class B, 60c a cu. yd., scow measure; Sept. 29, extension to southern breakwater at Belle River, P.E.I., W. Compton and A. J. Ross, Flat River, P.E.I., unit prices; Oct. 1, reconstruction of portion of wharf at Lotbiniere, Que., J. E. Lowrey and John Mulhall, Ottawa, Ont., unit prices; Oct. 8, extension to breakwater, Battery Point, N.S., Reid Construction Co., Granville Ferry, N.S., 12¼c a cu. ft. of crib-work complete; Oct. 9, reconstruction of wharf in concrete, Lanoraie, Que., F. A. Grothe & Fils, Montreal, unit prices; Oct. 10, dredging harbor, Cobourg, Ont., Frontenac Dredging Co., Toronto, class B, 65c a cu. yd., scow measure; Oct. 13, dredging harbor, Collingwood, Ont., C. S. Boone Dredging & Construction Co., Toronto, Ont., class A, \$8.50 a cu. yd., scow measure, and class B, 75c cu. yd., place measure; Oct. 22, dredging channel at St. Michel de Bellechasse, Que., National Dock & Dredging Corporation, Levis, Que., class A, \$4 cu. yd., and class B, 55c cu. yd., scow measure.

Ships Registered in Canada in August and September, 1923.

In compiling the following lists of ships registered, steamboats and motor boats operated by engines of less than 10 h.p., are eliminated, as also are sailing ships of less than 100 tons.

Longshoremen's Strike at Vancouver and Victoria.

Longshoremen employed on the Vancouver waterfront struck for higher wages, Oct. 8, and those working at Victoria subsequently asked for higher wages also. On Oct. 11, it was announced that the C.P.R. had placed an embargo on grain shipments to Vancouver, but it was ascertained by the marine interests that this embargo was provisional and would apply only in case of the port becoming blocked as a result of the strike. The British Columbia Shipping Federation, an incorporated body, which comprises 23 of the largest firms engaged in the marine business on the Pacific coast, took all necessary steps to safeguard shippers' interests and we were advised recently that it was able to secure sufficient men to prevent any blocking of the port, and that the loading and unloading of ships was being proceeded with in a practically normal manner. The Federation stated through the press that it was able to take care of all shipments of grain to Vancouver and had not only been able to do so, but previous records for loading at the elevator had been broken. Over 1,000 men were at work through the Federation's membership at the end of October, and all ships were being worked without delay.

Several efforts were made by local interests to bring about a settlement, but without effect, and the Minister of Labor advised the men, on Nov. 7, to return to work, when a board of conciliation would be established. F. E. Harrison, representing the Labor Department, was in Vancouver, Nov. 7, and had several interviews with officials of the Shipping Federation and of the International Longshoremen's Union, but could not succeed in establishing a basis of negotiation. The British Columbia Deputy Minister of Labor arrived in Vancouver, Nov. 8, when it was reported that there were over 1,400 men, all citizens of Vancouver or other British Columbia places, employed by the shipping companies, and that the work was being done satisfactorily. The number of longshoremen on strike was reported to be about 800.

At Victoria, a body of independent waterfront workers has been formed, to which the local shippers will, it is reported, give their support. A sufficient number of non-union men are available for loading and unloading all ships arriving at and departing from the port.

Montreal Harbor Improvements.

During this year the Montreal Harbor Commission has made a series of improvements to its property, on a very extensive scale, to maintain and increase the port's efficiency. The most important work of improvement has been the construction of another elevator, no. 3, near the Tarte pier, at the eastern end of the harbor. It has a capacity of 2,000,000 bush. and provision has been made for the addition of other units up to 14,000,000 bush. With the completion of the unloading jetty next year, this addition to the facilities will have cost \$2,850,000. The commission bought the G.T.R. elevator at Windmill Point, in March, and added to its 2,150,000 bush. capacity, a section with space for 1,350,000 bush. additional. The unloading, loading and general working facilities at this elevator have been improved and added to, so that it is now capable of unloading 262 cars a day, in addition to taking in

150,000 bush. a day from lake ships, and its capacity for loading outgoing ships has been increased from 450,000 bush. a day to about six times that figure. The cost of these improvements has been \$750,000.

The extending of the piers was commenced in 1919, and this year the extensions of the Alexander and King Edward piers have been completed. The extension of each of these was 300 x 300 ft. and 60 ft. high from the bottom of the river to the floor of the pier, each extension costing about \$450,000. Considerable improvements were also made on other wharves, about 750 ft. of new work having been completed at a cost of about \$300,000. Sheds 26 and 27 have been erected on the Tarte pier, adjoining shed 25, each 450 ft. long, and estimated to cost, when completely equipped, \$275,000.

Mechanical shops for the commission's purposes, have been provided, at a cost, with equipment, of \$150,000. The roadways on the harbor property have been improved, the lighting facilities added to, and the railway facilities increased by laying additional tracks to the elevators and the wharf extensions. In addition to all this work on shore, the commission began the work of providing a new basin between the Bickerdike pier and the guard piers. The dredging is reported to be well in hand, and when completed, will give a new basin 4,000 x 700 ft. and 35 ft. deep.

The total wharfage space of the port is 43,415 lin. ft., of which 1,398 is for ships of under 20 ft. draught, 15,090 for ships of less than 30 ft. draught, and 26,927 for ships of 30 ft. or over. There are berths for 28 ships 500 ft. long drawing 30 ft.; 36 berths for ships 400 ft. long drawing from 25 to 30 ft.; 17 berths for ships 300 ft. long drawing 20 ft., and 39 berths for ships 200 ft. long drawing 10 ft.

Vancouver Elevator Construction.

We are officially advised that plans submitted by the Vancouver Harbor Commission have been approved by the Minister of Marine, for the construction of a wharf and the dredging of a basin to be leased to Woodward & Co., Ltd., of Winnipeg, who are building a grain elevator in Vancouver, and for the purchase of the waterfront property from the company on which the elevator and the wharf will stand. The elevator, however, will be built and operated by Woodward & Co. Under the Vancouver Harbor Advances Act, the commissioners will be entitled to apply for advances on loan up to \$225,000 as this work progresses.

Woodward & Co.'s elevator is, we are

officially advised, located immediately east of the sugar refinery. The substructure was built by driving piles to bed-rock, gravel fill and reinforced concrete mattress being superimposed thereon. The cofferdam used during construction is left in place, with a gravel fill between the wall of the cofferdam and the elevator, and gravel fill on the outside of the cofferdam as protection against wash. The elevator warehouse is of timber, metal clad. There are 2 main receiving legs, each of 15,000 bush. an hour capacity, either or both of which can be used for shipping. There are 4 receiving pits in the track shed; the track shed is carried up a second story, providing a warehouse for the operating of sacking machines. The cleaning equipment consists of 4 monitor separators on the ground floor. There are 4 cleaning legs to take care of the cleaned grain from each of these machines, and a screening leg to take care of the by-product from them. On a distributing floor are 3 disc separators which will rehandle the by-product from the monitors, and there are two Fairbanks 2,000 bush. scales. The storage annex to the plant consists of 18 concrete tanks with 500,000 bush. capacity each. The workhouse is designed to add further cleaners, so that it can serve 1,000,000 bush. of storage. The dock is 1,655 ft. long, and the elevator is located midway on the structure, to permit 40 loads to be placed on the head track, and 40 empties on the tail track. A conveyor belt extends from the elevator to the outer end of the pier. The grain from the conveyor is transferred to steamships from the conveyor belt by a movable leg. The structure carrying this loading leg is mounted on rails and can be moved to any point on the wharf necessary to reach any hatch of the ship loading. The elevator was designed and built by Dominion Construction Co., Vancouver, work being started in March. The structure was expected to be completed by Nov. 30.

Canada Shipping Act Changes Asked.

—During his recent visit to Vancouver, B.C., the Minister of Marine and Fisheries received a deputation from the Canadian Merchant Service Guild, and discussed a number of matters affecting the interests of marine men, in regard to which revision of the Canada Shipping Act was considered desirable. These included the provision that complainants must prosecute for violations of the act, appeals from wreck commissioners' decisions, inspection of hulls at same time as ships' machinery, and that in preparing amendments to the act, practical marine men from the Atlantic and the Pacific coasts and the Great Lakes form an advisory board.

New C.P.R. Steamships for British Columbia.

During his recent visit to the Pacific coast, E. W. Beatty, President, C.P.R., announced that the company would build two additional steamships for its British Columbia coast service. We are officially advised that they will be for the triangular service between Victoria and Vancouver, B.C., and Seattle, Wash., and will be somewhat similar to the s.s. Princess Louise, but larger and faster, and that plans are being prepared, and tenders will be invited from shipbuilders in Great Britain. The Esquimalt Board of Trade endeavored to secure the co-operation of other public bodies in an effort to have the ships built in British Columbia, but this was not possible. Captain J. W. Troup, Manager, B.C. Coast Service, arrived in Montreal, Nov. 7, from Victoria, and was in consultation with E. W. Beatty, President, and other C.P.R. officials, respecting the placing of the orders for the ships. He is reported to have said it was intended originally to have had them built on the Pacific coast, but it was not found to be practicable. The engines necessary could not be built in Canada, and it was not practicable to build the hulls in Canada and the engines elsewhere. Captain and Mrs. Troup sailed on the Empress of France, Nov. 10, for Liverpool.

Canal Traffic Statistics.

The Dominion Bureau of Statistics, Transportation Branch, has issued the following summary of canal statistics for September:—

Sault Ste. Marie—Heavy iron ore shipments, viz., 9,480,891 tons, against 6,658,148 tons last year, accounted for practically all of the 1,788,824 tons increase in traffic through the Canadian and United States locks. Wheat fell off 14,885,743 bush., and other grains 7,366,433 bush. The movement of grain to the country elevators was about a week later this year, but the heavy movement to Fort William and Port Arthur was about two weeks later than last year. Of the 20,261,922 bush. of Canadian grain from Fort William and Port Arthur, consisting of 17,123,761 of wheat, 1,624,578 of barley, 1,005,449 of rye, 387,816 of oats, and 120,318 of flax, 12,269,845 were destined to Canadian ports and 7,992,077 to U.S. ports. Canadian ships carried 15,-

229,205, or over 75%; U.S. ships 4,736,066, or 23%, and Norwegian ships 296,651, or 2%.

Welland.—Wheat shipments increased 14%, or 36,317 tons; barley increased 9,949 tons and rye 21,076 tons, but corn decreased 44,313 tons and oats 11,961 tons. Soft coal shipments increased 23,334 tons, and sand 21,175 tons, while pulpwood declined 6,372 tons, and total traffic increased 45,673 tons, or 9% over last year.

St. Lawrence.—Canadian steamships increased 124,920 net tons, while U.S. steamships decreased 60,371 net tons. Passenger traffic was heavier than last year by 1,581 passengers, but freight traffic decreased 11,102 tons. There were decreases in corn of 46,372 tons; oats, 12,937 tons; flour, 4,653 tons; lumber, 3,826 tons; anthracite coal, 1,503 tons, and bituminous coal, 21,878 tons. Barley, rye and wheat increased 14,922 tons, 19,818 tons and 16,634 tons, respectively.

International Fishermen's Trophy Races.

The third contest for the international fishermen's trophy was arranged to be sailed off Halifax, the first race to be Oct. 29. The defender was the Lunenburg, N.S., schooner Bluenose, which won the trophy in 1922, the challenger being the specially built schooner Columbia of Gloucester, Mass. Bluenose won the opening contest in 4 hr. 43 min. 42 sec. elapsed time, beating the Columbia by 3 minutes. In the second race the wind fell away to such an extent that the course could not be sailed within the time limit, and the race was declared off, the Columbia being in the lead by about 4 minutes. The schooners again met in the contest Nov. 1, when Bluenose made the course about 2 minutes ahead of Columbia. A protest was entered by Columbia that Bluenose had passed on the wrong side of one of the buoys, in contravention of the general racing directions, and the committee awarded the race to the challenger. The captain of Bluenose, shortly afterwards, sailed his vessel back to Lunenburg, saying he was through. The Columbia's captain declined to sail the course alone in the third race, and the committee decided to retain the cup, and to divide the prize money as expenses between the two contestants. Is international racing worth while?

Dominion Quarantine Regulations and Stations.

An order in council was passed May 9, approving revised quarantine regulations under the Revised Statutes of Canada 1906, chap. 74, sec. 8. These have been put into force by the Governor-General's proclamation, dated Sept. 12, and published in the Canada Gazette, Oct. 20.

The whole of the Canadian quarantine service is controlled by the Minister of Health, and is administered under him by the Health Department. The organized quarantine stations in Canada are: Grosse Island, St. Lawrence River, with Father Point as the inspecting base, and Quebec and Montreal harbors as substations; Halifax, N.S., the harbor and Lawlors Island; Sydney, N.S., North Sydney, the harbor and Point Edward; Louisburg, N.S., and the harbor; St. John, N.B., the harbor and Partridge Isle; Victoria, B.C., the harbor and William Head, with Vancouver and the harbor as a substation. Each of these organized stations is in charge of a medical quarantine officer, and substations are in charge of the chief or senior immigration medical officer. All other maritime ports are designated unorganized maritime quarantine stations, the local collector or sub-collector of customs being quarantine officer. The regulations specify the diseases for which quarantine is declared, and cover the disinfection of ships, isolation of sufferers on board, the cleaning or destruction of clothes and outfit, and the preventing of rats coming on board from infected ports. It is provided that costs incurred in connection with such quarantining of ships' personnel other than the crew will constitute a charge upon the ship from which such persons are removed, according to a scale of fees approved by the Minister of Health. The fee payable to a quarantine medical officer for each medical inspection is \$10.

Pacific Salvage Co.'s Operations.

The Pacific Salvage Co.'s wrecking ship *Algerine*, while on her way to the assistance of the stranded s.s. *Kennecott*, on one of the Queen Charlotte Islands group, went ashore on Brodie Rock, Principe Channel, between Banks Island and Pitt Island, Oct. 13, at 5.50 p.m. Brodie Rock is, we are advised, submerged at half tide, and is shown on charts as being one mile from shore, but reports state that it is a mile and a half off shore. It was a very dark night and raining hard at the time of the stranding. The *Algerine* was refloated Oct. 14, at 4 a.m., and was towed by the tug *Nanoose* to Esquimalt, where she was put on the ways on Oct. 23 for examination. The survey showed very extensive damage. The company is reported to have transferred the *Algerine's* wrecking equipment to the C.P.R. s.s. *Tees*, which will be used for salvage work for some time.

The company's tug *Hercules* was sent on to the stranded s.s. *Kennecott*, following the *Algerine's* stranding. The *Kennecott* was reported, Oct. 23, to have broken up. Capt. John Johnson, the master, who had remained with the ship, returned south on the *Hercules*, and was transferred subsequently to the Union Steamship Co.'s *Venture*, from which he disappeared, and it is believed he was drowned.

The Inland Water Freight Rates Act's Final Failure.

As stated in Canadian Railway and Marine World for November, pg. 552, the Board of Grain Commissioners, presumably under the Dominion Government's authority, practically authorized complete evasion of the text and spirit of the Inland Water Freight Rates Act, 1923, by issuing the following notice: "To all concerned.—You are hereby notified that the Board of Grain Commissioners is prepared to accept as a compliance with the Inland Water Freight Rates Act, 1923, sec. 3, either the filing with the Board of tariffs by the ship

shippers before loading, of copies or contracts for space, as this, so far as the ship is concerned, restores and preserves our right of contract, and places no obligation on the ship. It would, of course, not affect the reasonableness of the rates, because we assume that before the shipper definitely closes his contract with the ship he has due approval of the Government. With this understanding we see no objection to United States ships taking Canadian grain as in previous years."

The first result of the Board of Grain Commissioners' notice, which was natur-

ject of discussion being the ruling by which filing of rates by shippers would be accepted in place of filing by ship owners. The U.S. ship owners pointed out that if they evaded the act in the manner indicated in the Board's notification of Oct. 19, there was nothing to prevent private individuals or competitive interests starting legal proceedings against them under the act. They therefore demanded that, before they would accept the invitation to go ahead and violate the Canadian law, as extended to them by the Board of Grain Commissioners and the Government, they must have assurances as follows: That should the Canadian shipper fail to register with the Board of Grain Commissioners a copy of his charter of any U.S. ship at the time that charter was made, he would indemnify the U.S. ship owner for any loss which might arise from the non-filing of such charter; also that, having filed the charter at the time it was made, the Canadian shipper would undertake to indemnify the U.S. owners, through the Board of Grain Commissioners, for any loss which might occur through any proceedings which might be taken against the ship.

Messrs. Boyd and Snow proceeded immediately to Winnipeg and, on Oct. 29, called a meeting of interested shippers and brokers, to acquaint them with the U.S. ship owners' demands. The shippers, at this meeting, expressed themselves as willing to indemnify the U.S. ship owners against loss, particularly when Mr. Boyd, as representing the Board of Grain Commissioners, and presumably the Dominion Government, announced that he would give the Secretary of the Winnipeg Grain Exchange, for the shippers' protection, a guarantee of indemnification against legal proceedings or claims for damages which might be instituted by private parties in connection with the chartering of U.S. ships and the filing of rates by shippers instead of by ship owners. As a result of the shippers' willingness to protect the U.S. ship owners under these conditions, the following provision was drawn up, to be included in all U.S. ship charters:

"This charter is made with the understanding that the Board of Grain Commissioners of Canada, with approval of the Canadian Government, has duly ruled that the Inland Water Freight Rates Act of Canada will be so complied with as to authorize the shipment of grain from Canadian ports, if the shipper shall, before loading, file with said Board copies of charters of contracts for space entered into for grain shipments. And it is agreed, that the shipper shall, and will, on his own behalf, and not as representing the vessel owner (the vessel owner assuming no responsibility therefor), promptly, upon the execution hereof and before any loading takes place, file copies of charter or contract for space as required by the Board of Grain Commissioners of Canada, so as to render all shipments herein provided to be made fully authorized by Canadian authority, —so that such vessel employed hereunder may, in every case, freely enter the port or ports of shipment and receive its cargo, and that clearance may be obtained and the vessel may leave port, without prevention, hindrance or liability because of or under said Inland Water Freight Rates Act of Canada; and that the shipper shall, and will, indemnify and save and keep the vessel owner

The Inland Water Freight Rates Act, 1923, Muddle.

Minister of Trade and Commerce (noting work of new grain shoveler): "Help! Help! His work is most unsatisfactory! He's causing a blockade! Help!" Reproduced from Montreal Star.

owner, or the filing by the shippers, before loading, of copies of charters or contracts for space." As further stated in our November issue, the U.S. ship owners appeared satisfied to come in to the Canadian grain trade providing the shippers filed the statements, as evidenced by a telegram sent on Oct. 22 by the U.S. ship owners' committee chairman to the Board of Grain Commissioners Chairman, which was in part as follows: "The vessel owners here represented will decline to file such tariffs. We can have no objection to filing by the

ally regarded by all as a complete confession, by the Dominion Government, of the legislation's futility, and which, authorizing action directly contrary to the act's intent and purpose, had a most undesirable influence in bringing Parliament and its statutes into contempt, was a precipitate decline in lake grain rates, the rate from Fort William dropping about 2c to all ports.

On Oct. 25, Chairman Boyd and Commissioner Snow of the Board of Grain Commissioners were in Cleveland in consultation with U.S. ship owners, the sub-

harmless from all loss or damage resulting from any failure to so file this charter; or, having so filed the same with the Board of Grain Commissioners, in case any liability shall be asserted against the vessel, her owner, agents or servants, by reason of any shipment or proposed shipment hereunder, the shipper shall, and will, through the Board of Grain Commissioners, or otherwise, indemnify, save and keep harmless therefrom the vessel, her owner, agents and servants. And in consideration of the foregoing on the shipper's part, the vessel owner agrees to perform his part of the charter to carry the cargo as above provided."

By Oct. 31, the situation was that the Dominion Government had finally found a way to allow U.S. ship owners to vio-

late the law, Canadian grain shippers guaranteeing to protect the U.S. ship owners in that violation, the Board of Grain Commissioners guaranteeing to protect the shippers, and the Dominion Government, in effect, guaranteeing to protect the Board of Grain Commissioners.

The bringing about of this state of affairs just about concluded the brief and meteoric career of the Inland Water Freight Rates Act, 1923, so far as its operation in the 1923 grain shipping situation was concerned, and this coincided very closely with well-informed expectation. With the Government's abject surrender—the abjectness heightened by the cheap and transparent camouflage employed—which might have been avoided if a frank admission concerning the

act's impracticability had been made, competition supplemented the Inland Water Freight Rates Act as the controlling feature in the lakes grain shipping situation, rates continued their decline from the point reached in the abrupt drop following the giving of full permission to evade the act, until by the middle of November, 3c was the ruling rate to Buffalo and Georgian Bay ports, Canadian farmers ceased to experience the huge losses which the act was inflicting on them, members of the grain trade were enabled to make contracts with assurance that lack of transportation would not prevent them carrying them out, and another bungling attempt by a Government to interfere with the full and free flow of trade and commerce came to an inglorious conclusion.

Wreck Commissioners' Enquiries and Judgments.

Grounding of s.s. Canadian Sapper.

Held at Montreal, Oct. 2, by Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. J. O. Grey and C. Lapierre, into the grounding of Canadian Government Merchant Marine s.s. Canadian Sapper, off Red Island, in the St. Lawrence River, Aug. 29, with no apparent damage. Capt. A. Blouin, of the Canadian Sapper, stated that he was bound from Newfoundland to Montreal, light, and had taken on a pilot at Father Point, and having been on deck for 3 days previously, and the weather being clear, he left the ship in charge of the pilot, Rodrigue Lachance, with the express command to run no risk and to anchor if fog came on. The order book showed that it was his wish to be called if the weather became hazy or foggy, and the night orders ended with a request to be called if wanted. Some minutes before the casualty he was called by second officer Neil MacDonald, on account of fog, and he dressed immediately, taking about 4 minutes to leave for the bridge, when the telegraph was put at half speed, the ship striking shortly after. The course was s.w. by w. $\frac{1}{4}$ w., and a deviation of 7 to 8 deg. easterly. He said there was a light breeze, but this did not accord with the log book. The ship remained fast for about 4 hours and floated off with the rising tide, apparently undamaged. He helped the pilot to make a report. The pilot stated that he had been a pilot for 6 years, and had not appeared previously before a court of enquiry. He made the lightship at Red Island within $1\frac{1}{2}$ cables, and altered the course when the lightship was seen on the port bow, proceeding at full speed until the fog thickened, when speed was reduced and the captain was called. It was ebb tide, and he had run 25 minutes when the ship grounded. He could not tell exactly as to the captain's orders, or if he ordered anchoring when the fog was thick, but he stated that there was thick fog all the time from leaving the lightship on the starboard beam until the grounding. The second officer, Neil MacDonald, stated that fog came on at 8.40 a.m., the ship striking at 8.54, and that half speed was put on at 8.48. There was no order for a cast, and there was a light breeze from the southwest. The third officer, D. Squires, stated that he saw all of the lightship, and objects were visible $2\frac{1}{2}$ miles, that a light southwest wind was blowing, that the lightship was seen $1\frac{1}{2}$ points on the port bow, and the course was changed to s.s.w., until the lightship was abeam. He

thought there was a 5-mile ebb flowing. He was relieved by the second officer and left the bridge at 8.32. The wheelman stated that the course had been changed 5 or 6 times and that the telegraph was rung but once. The chief engineer, T. H. Angell, stated that at 8.40 the ship was going full speed, at 8.44 half speed was given, the ship grounded later and a stop order was received, and no other. The court held that as to the circumstances preceding the grounding, many contradictory statements of a minor nature were made. It considered that the captain was justified in taking a rest when the weather appeared to be, and was, clear, and that he took the necessary steps upon leaving the bridge to caution the pilot, his night orders being very explicit. The time taken for him to reach the bridge would have been open to criticism, if more definite information had been given him by the second officer as to the passing of the lightship. There was no apprehension of danger in his mind, and evidently, not in the second officer's mind. Hence the 4 minutes taken to reach the bridge was excusable, and no blame can be attached to the captain for the casualty. The second officer, it would seem, by the entries in the log and the inconsistencies in the evidence, did not follow to the letter the captain's instructions, as found in the night order book, but it appears that the ship was for some time enveloped in fog before a decision to call the captain was reached, which, in the court's view, constituted a disobedience of orders. The pilot also disregarded the captain's orders to anchor when foggy, and to take no chances. As his course had been given to pass in the South Traverse, in accordance with the company's wishes, the company having forbidden the navigation of the north channel, the finding of the lightship on his port bow was sufficient to indicate to him that the deviation given him fell short of accuracy. His course from the lightship, after bringing it on the starboard beam, was considered by the court as too fine, in view of the conditions prevailing. It was not proved that the pilot saw the buoy when the ship grounded, and which he stated was on his port. The pilot should have anchored, thereby meeting the captain's prudent request, when the lightship was left on a s.w. by w. course, with fog, either prevailing, or thickening. Capt. Blouin was therefore exonerated from blame for the casualty, second officer MacDonald was reprimanded severely and advised that

if he appeared before the court again and be found wanting, his certificate would be dealt with. Pilot Lachance, seeing that it was his first appearance before a court of enquiry, was reprimanded severely for disregarding the captain's orders to anchor, and take no chances, and was cautioned that if, on a future appearance, he is found in default, his license would be dealt with.

S.s. Siberian Prince Stranding.

Held at Victoria, B.C., Oct. 4-6, by Capt. John D. Macpherson, Wreck Commissioner for British Columbia, assisted by Capt. B. C. Combs and Harry Mowatt, into the stranding of the British s.s. Siberian Prince on Bentinck Island, near Race Rocks lighthouse, B.C., on July 28, about 1.44 a.m. The court having carefully heard, on the one part, evidence of a convincing and unreserved character, substantiated as it was, by other expert evidence, of an unbiased and impartial nature, finds, for the reasons stated in an annex, that the stranding of the Siberian Prince during a dense fog, was caused solely through the agency of two factors, the one being a strong northerly set of the spring flood tide, and the other the inaudibility of the fog alarm established on the Race Rocks. There can be no less doubt of the efficiency of the fog sounding apparatus (it being clearly established as being of the most modern type) than there can be of the fact that it was in operation, both before and after the vessel stranded, but nevertheless for some reason, which the court is not prepared to explain, there can be little question, that it was never heard by those on board the ship. The court, therefore, in view of the foregoing, and being of the opinion that the ship was being navigated with every care and attention, a good and proper course being steered and attended to, due allowance made for the set of the tide, speed reduced, a careful and efficient lookout kept, whistle blowing, log streamed and frequently read, soundings taken, stellar observations to determine the compass deviation obtained, returns to the master of the ship, Robt. Milliken, his certificate of competency as master, no. 034836, and absolves him from all blame for the stranding of the ship. No possible blame, in the court's opinion, can be attached to Wm. Anderson, second officer, who was on duty at the time of the casualty, and who impressed the court as being a most capable and efficient officer, or to any other of the deck or engine room officers or other ratings of the crew.

Steamboats Archibald and W. J. Guest Collision.

Held at Selkirk, Man., Oct. 5, by Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Herbert Barker and Hugh Cochrane, as nautical assessors, into collision between the steamboats Archibald and W. J. Guest, on the Red River, on Oct. 5, at 10.45 p.m., resulting in the death of two of the Archibald's crew. The court having carefully weighed the evidence adduced, and for the reasons given in the report, found M. McLeod, master of the Archibald, in default for violating the International Rules of the Road, articles 27, 28 and 29, which, the court is of opinion, govern the navigation of Lake Winnipeg and its tributaries. With respect to W. P. Simpson, master of the W. J. Guest, the court found that he was carrying on board his boat, in contravention of the Canada Shipping Act, a number of passengers, and also violated articles 27, 28 and 29 of the rules; and, if his testimony that the weather was misty, and he could see no further than 100 yards, was correct, he also violated article 15. The onus for this sad accident, which was attended with loss of life, must be borne to a greater extent by the W. J. Guest, as there seems to have been neglect in keeping a proper look out, especially in view of the fact that the master had on board other lives than those of his crew. In view of the above, the court suspended Capt. Simpson's certificate for one year, Oct. 29, 1923, to Oct. 29, 1924. The court ordered Capt. McLeod to defray costs of the investigation, amounting to \$300, payable to the Marine and Fisheries Department at Ottawa, on Nov. 30, 1923.

The Manchester Liners Canadian Services.

The directors of Manchester Liners Ltd. report, presented at the recent annual meeting, showed a net profit of £65,812 15s 10d, after paying interest on the 5% preference shares, which, added to the surplus from the previous year, made £107,296 1s 6d available for disposal. The Chairman, Sir Frederick Lewis, in moving the adoption of the report, said, in part:—"As mentioned in the report, the steamships employed in the Canadian service have been partially refrigerated, and it is expected that this departure will lead to a greater carrying of the commodities which require such space and which have not hitherto come direct. The increase in quantity of this particular class of cargo has been of good proportions. This departure is in accordance with the directors' policy in keeping your company up-to-date in every respect. As many shareholders are aware, the embargo on the importation of Canadian store cattle, which has been a source of grievance with our Canadian cousins for many years past, was removed in April last, and up to the close of our trading year we obtained substantial shipments. In my remarks last year respecting cattle shipments, I mentioned that for a variety of reasons, which we could not control, we had, up to that time, been compelled to agree to Birkenhead delivery, but that when the embargo, the removal of which had then been decided upon, became operative, we hoped we should be able to get shipments to Manchester. I am glad to be able to say these anticipations proved correct and that all the cattle carried by our ships from April to June 30, numbering 4,039, were for delivery at this port."

Trend in Canaller Construction.

A naval architect has written Canadian Railway and Marine World as follows: "There are many who think that finality has practically been reached in canaller design and construction, and that no major changes are to be looked for in the near future. I do not by any means subscribe to this view. Necessity, which in this case may be termed competition, is the mother of invention, and we shall undoubtedly see very considerable improvements over present types, or I miss my guess.

"It is a well known fact that the useful life of warships is very short, they becoming obsolete long before physical deterioration sets in. The same principle applies to all ships built for a special trade, or to suit special conditions of navigation. On this account it is almost fatal, from the point of view of successful competition, to build a ship which is not at least in the van of the latest developments in marine architecture or engineering. From a physical aspect, the life of a steel ship in fresh water, given ordinary care in upkeep, may be assumed to be at least 35 years, but there is a grave likelihood that if, when a ship is built, owners are content merely to repeat a type which has been successful in the past, she will be to a greater or less degree obsolete, long before her natural life has expired, and at a serious disadvantage, commercially speaking, with ships built, say, 15 or 20 years later. It is questionable if this consideration alone is not sufficient to justify an executive in accepting some degree of chance in giving a proposed improvement a trial, provided, of course, he is advised by a competent authority that the prospect of a successful issue is reasonably assured. It is often a case of 'nothing venture, nothing win.'

"Leaving aside the package freight business, which is not a big factor, we have three principal bulk trades on the St. Lawrence canals system, grain, coal, and pulpwood. The latest type of canaller is generally very well adapted to grain and coal transportation, loading and discharging being effected in very short order, though little credit is due the ships, the speed of handling being almost entirely due to the exceptional shore devices which have been developed. When, however, one considers the pulpwood trade, and this is a movement likely to grow, rather than diminish, the proposition seems to be a little beyond existing shore facilities, and it is assured that if improvement is to be effected, it must be accomplished by development in ship design. In this connection it is noteworthy that transportation of special bulk cargoes, as distinct from general cargoes, has in the past invariably developed a special type of ship, and just as surely as the oil business has developed the tanker; the coal trade, the collier; the meat and fruit trades, the refrigerator ship; passenger traffic, the liners, etc., just so surely the pulpwood business is now attaining the importance and magnitude to exercise a very decided influence on canaller design. Possibly what will prove of the greatest difficulty will be to find the best compromise to suit equally all three of these major cargoes. It is obvious that if it is possible to evolve a type of ship which will handle pulpwood cargoes with the same facility and economy with which grain and coal cargoes are moved, and without impairing the ship's handiness in the

grain and coal trades, a very great advance will have been made in the general efficiency and economy of the canaller type of vessel. This problem presents a very fascinating sphere for investigation and experiment.

"Another factor which will soon have to be taken into consideration by interests purposing building ships for local waters is, what influence will the completion of the new Welland Canal have on the St. Lawrence canals traffic. The upper laker will come to the eastern end of Lake Ontario, instead of Lake Erie, canalling will be very considerably reduced for the smaller type of ship, and its navigation, except for the Gulf trade, will be confined to much more sheltered waters than at present. Some are of the opinion that few more of the existing type of canaller will be built, and that instead it would be better to build a straight canal barge of the fullest dimensions and form, with accommodation for the minimum crew, and with machinery only sufficiently powerful to propel it in the canals at the restricted speed prescribed by the regulations. These barges to be handled in the small intervening lakes and river stretches between canals, by tugs of adequate power to obtain the accelerated speeds possible in these stretches. In this way the carrying capacities of the individual units could be considerably increased and their cost reduced.

"At the risk of appearing to present an interested viewpoint, it may here be remarked that the trend in some quarters to arrange for the building of new tonnage through brokers, who have merely a superficial or talking knowledge of design, or directly with shipbuilders 4,000 miles away, who have no firsthand knowledge of operating conditions, is an error in judgment, which is undoubtedly putting a curb on the evolution of the best type of ship.

"These remarks have been confined to the question of general design and operating conditions. There are, however, many questions of detail, just as important in the aggregate, which give food for reflection, such as the adoption of the oil engine, the use of oil-fired boilers, protection against canal damage, ship equipment, etc., and which all go to indicate that we are a long way off finality in the development of the best type of ship for inland water navigation."

Tide Tables.—The Dominion Marine and Fisheries Department, Tidal and Current Survey, has issued tide tables and information on currents for 1924 for Canadian eastern coasts, including St. Lawrence River and Gulf, the Atlantic coast, Bay of Fundy, Northumberland and Cabot Straits, also for Canadian Pacific coast, including the Fuca and Georgia Straits and the northern coast, with data for slack water in the navigable passes.

Yarrow & Co., shipbuilders, Glasgow, Scotland, are reported to have been given an order to build a large shallow draft river steamboat for the Anglo-Saxon Petroleum Co., for the Yangtse-Kiang River, in China, which will necessitate the re-opening of their Scotstoun yard, which has been closed since 1921. It is said that the date of resumption of work will depend on the settlement of the protracted boilermakers' strike.

Toronto Harbor Commission's Chairman Resigns.

R. Home Smith, Chairman, Toronto Harbor Commission, has resigned after serving on the Commission for 12 years. His term would have expired on Dec. 31. At a dinner given by the Harbor Commissioners to members of the Toronto City Council and others on Oct. 30, at which he announced his resignation, he stated that he and his colleagues had not had the undivided support of the citizens, the press and the city council, and that he had no desire to continue under such conditions. Other harbor commissioners present were R. J. Fleming, ex-General Manager, Toronto Ry. Co.; T. L. Church, M.P. for North Toronto; and R. S. Gourlay. Messrs. Fleming and Gourlay, in brief speeches, left the impression that it was their desire to resign from the commission also, consequent on Mr. Smith's resignation, and Mr. Church stated that if his three colleagues resigned, he would also. In a statement made prior to the announcement of his resignation, Mr. Smith said that if the harbor undertaking is to be successful, the commissioners must be given authority to sell reclaimed land (not that actually on the waterfront, but closely adjacent thereto) to industrial corporations. The situation has been that the commission has been empowered to lease land only.

Since the last municipal elections in Toronto, at the end of 1922, when a proposal to bring hydro radial railways into the city from the west along the lake-front was defeated, there has been a very noticeable hostility to the harbor commission in certain quarters, on account, presumably, of its opposition to that proposal, and it is freely stated that it was on account of that attitude, and of criticism of extreme and undesirable type by a section of the local daily press, that Mr. Smith resigned.

The C.P.R.'s Steamship Empress of Australia in the Earthquake in Japan.

The C.P.R. has issued, in a 24-page booklet, the official report of Capt. S. Robinson, R.N.R., commander of the company's s.s. Empress of Australia, on the earthquake at Yokohama, Sept. 1, and the services rendered subsequently. It contains two illustrations, an auto-graphed portrait of the author, and a view of the Empress of Australia. The report is written in simple and terse language—that of a man of action—and its simplicity and directness is a tribute to the writer's modesty, as his actions during the fearful experience were a tribute to his resource and courage. The incidents of the disaster as they were brought under his notice from noon on Sept. 1, when, as the steamship was preparing to leave the dock at Yokohama, the first shock of earthquake took place, until Sept. 12, when after encountering innumerable difficulties, including a fouled propeller, a sea of burning oil, and serving as a hospital and relief ship for the earthquake sufferers, the Empress of Australia left the scene of the disaster for Vancouver. There were several occasions when the ship could have got away safely, but in the words of Capt. Robinson's narrative:—"Mr. Boulter, the British Consul, said he wished us to stay in port as there was no other ship in the harbor suitable for taking care of

the refugees who were coming in all the time from the districts near Yokohama. I told him, Mr. Rankin and Mr. Fitzgerald" (of the C.P.R. staff) "agreeing, that I considered, and I was sure my company would consider it my duty to stay as long as it was necessary, in order to save life and rescue and relieve the distressed, and if he, or some one else in authority, was not here I should stay on my own responsibility the same as I would in a disaster at sea."

Capt. Robinson said in regard to the C.P.R.'s staff in Yokohama: "I was very glad to have James Rankin, General Agent, and M. Fitzgerald, Special Representative, on board; their tact and sound good sense were a great help at all times. I should also like to mention the help given to our Purser's staff by E. Hopes, Passenger Agent, who stayed on the ship until we arrived at Kobe, and worked very hard."

The report concludes with an expression of strong admiration and appreciation of the work and conduct of all the officers and crew; of a tribute to the British Consul, and a tribute to the captain and crew of the tank steamer Iris, which towed the Empress of Australia out to safety after her propeller had got foul of an anchor chain, which was finally removed by divers from a Japanese and a British warship. Appended to the report are letters addressed to Captain Robinson by the refugees, passengers on the ship, and the United States Relief Committee, in recognition and appreciation of his skilful handling of the many situations which presented themselves.

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

Babcock and Wilcox, and Goldie and McCulloch, Ltd.—Babcock and Wilcox, of London, Eng., Babcock and Wilcox Co. of New York, and Goldie and McCulloch of Galt, Ont., have organized a Canadian company, under the name of Babcock-Wilcox and Goldie and McCulloch Ltd., with head office and works at Galt, an authorized capital of \$3,000,000 and branch offices in Montreal, Toronto, Winnipeg and Vancouver. The directors of the new company are: R. O. McCulloch, President; A. R. Goldie, Vice President, both of Galt; A. G. Pratt, New York, Chairman of the Board; A. W. Atwater, K.C., Montreal; W. D. Hoxie and E. H. Wells, New York, and Sir James Kemnal, London, Eng. H. W. Weller, heretofore Manager of Babcock and Wilcox Ltd., Montreal, has been appointed Vice President there in charge of eastern sales. Western sales will be handled from the head office in Galt, with the exception of British Columbia, which will be handled by C. C. Moore and Co., Vancouver. The new company has acquired Babcock and Wilcox Ltd. Canadian business, and Goldie and McCulloch Co.'s business, except the latter's vault, safe and safety deposit box manufacturing. The new company will manufacture boilers, superheaters, economizers, stokers, boilers, boiler accessories, engines, pumps, turbines, condensers, etc., at Galt, and Goldie and McCulloch Co. will continue

to manufacture vaults, safes and safety deposit boxes there.

Canadian Vickers Ltd., Montreal, has taken over the Phoenix Bridge & Iron Works Ltd. plant there, and has entered the structural steel field, both at its own plant at Maisonneuve, and at the Phoenix Co.'s shop, and will fabricate bridges, structural steel and plate work of all descriptions. Canadian Vickers Ltd. has for some time past been doing a general engineering and manufacturing business in boilers, engines, mine machinery, pressure stills, tanks, etc., which will be carried on and probably enlarged. Canadian Vickers Ltd. organization is in charge of A. R. Gillham, Managing Director; P. L. Miller being General Manager in direct charge of marine and aviation work; and E. S. Mattice, Chief Engineer in direct charge of structural steel and industrial machinery.

Robert W. Hunt & Co., Ltd., consulting and inspecting engineer, chemist and metallurgist, Montreal, has appointed A. L. Harkness, B.A.Sc., as Chief Engineer. His record is as follows:—May 1906, graduated in civil engineering, with honors, from School of Practical Science, Toronto; May 1906 to Oct. 1907, draftsman, Dominion Bridge Co., Montreal; May 1908, graduated (B.A.Sc.), with honors, from Toronto University Faculty of applied science; May 1908 to May 1909, draftsman, Dominion Bridge Co., Montreal; March 1909 to May 1910, structural designer and estimator, Dominion Bridge Co., Montreal; May 1910 to Oct. 1910, on St. Lawrence Bridge Co.'s staff, preparing tender for Quebec Bridge; Oct. 1910 to April 1911, structural designer and estimator, Dominion Bridge Co., Montreal; April 1911 to Sept. 1919, on St. Lawrence Bridge Co.'s staff on design of Quebec Bridge; and from Aug. 1914, as Assistant Engineer to Engineer of Construction; Sept. 1919 to Jan. 1920, with Essellstyn, Murphy & Hanford, Detroit, Mich., on design of reinforcing concrete subway approach to Belle Isle Bridge; Jan. 1920 to Sept. 1920, with Smith, Hinchman & Grylls, Detroit, Mich., designing structural steel for Marysville Power House, Detroit Edison Co., also designing structural framework of other buildings in both reinforced concrete and steel; Sept. 1920 to March 1921, with an engineering firm placing orders and supervising shipments of materials for large power house for municipal council, Shanghai, China; March 1921 to July 1921, with Ross & Macdonald, architects, Montreal, as structural designer; July 1921 to April 1922, with Canadian Concrete Steel Co., on design of reinforced concrete frames for McGill medical building and Rosemount apartments, Montreal, also making preliminary designs and estimates for other buildings; April 1922 to March 1923, with H. C. Johnston & Co., general contractors; March 1923 to May 1923, with John S. Metcalfe Co., as structural designer; May 1923 to Oct. 1923, checking reinforced concrete design and supervising construction of Drummond Court apartments, Montreal. He is an associate member of the Engineering Institute of Canada, and a member of the Quebec Professional Engineers Corporation.

M. C. McElligott, Preston, Ont., proprietor of Canadian Cleveland Fare Box Co., has been appointed exclusive Canadian Agent for Damon-Chapman Turnstile Co., of Rochester, N.Y., and also for Sattley Coin Handling Machine Co., Detroit, Mich., manufacturers of coin counting and sorting machines.

Dake Engine Co., Grand Haven, Mich., manufacturers of steering gears, mooring hoists, capstans, anchor windlasses, gang plank hoists, drill hoists, spud lifters, centrifugal pumping sets, cargo hoists, etc., announces that the increase in its Canadian business, since it opened a branch office in Toronto two years ago, is such that it has removed to larger quarters at 502 Kent Building, from 45 Adelaide St. East. Capt. Wm. J. Stitt is Canadian Sales Manager.

Templeton, Kenly & Co. Ltd., Chicago, Ill., which, prior to the Great War, operated its own plant for the manufacture of Simplex jacks, at 179 Van Horne St., Toronto, and which surrendered the plant and facilities for war work, and subsequently maintained an office at 131 Front St. West, Toronto, under the direction of Arthur C. Lewis, until he went overseas with the 3rd Battalion, is arranging for the manufacture of Simplex jacks in Canada, under the direction of Mr. Lewis, who is now President, Templeton, Kenly & Co., Ltd., a Canadian corporation.

Guy Tombs, of Guy Tombs Ltd., Montreal, has been elected President, Pickfords Colonial Inc., which is a subsidiary of Hayes Wharf Ltd., of London, Eng., and which owns and operates docks, warehouses, lighters, trucks, etc., in London, particularly on the River Thames, having been engaged in transporting goods and passengers for many years. Another subsidiary has headquarters in New York, and Guy Tombs Ltd. will be represented there at 11 Broadway.

Transportation Associations, Clubs, Etc.

The names of persons given below are those of the secretaries, unless otherwise stated:—

American Association of Port Authorities—T. S. McChesney, New Orleans Port Commission, New Orleans, La.

American Railway Association, Mechanical Division, V. R. Haworthorne, 431 South Dearborn St., Chicago, Ill.

Bureau of Explosives—A. H. McMullen, Inspector, lines east of Port Arthur, 354 New Union Station, Toronto.—D. W. McNabb, Inspector, lines west of Port Arthur, C.P.R. station, Winnipeg.

Canadian Car Demurrage Bureau, Eastern Lines—W. J. Collins, Manager, 401 St. Nicholas Building, Montreal. Western Lines—F. W. Thompson, Chairman, 805 Boyd Bldg., Winnipeg.

Canadian Electric Railway Association—Eustace Smith, Jr., 35 Yonge Street, Toronto.

Canadian Freight Association—Eastern Lines, G. C. Ransom, Chairman, 909 Shaughnessy Building, Montreal.—Western Lines, F. W. Thompson, Chairman, 805 Boyd Bldg., Winnipeg.

Canadian Industrial Traffic League—H. W. Blahout, 950 Woodbine Ave., Toronto.

Canadian Passenger Association—Eastern Lines, G. H. Webster, 54 Beaver Hall Hill, Montreal.—Western Lines, E. J. Stone, 306 Union Station, Winnipeg.

Canadian Railway Board of Adjustment No. 1—R. Chapple, 263 St. James Street, Montreal.

Canadian Railway Club—W. A. Booth, 53 Rushbrooke St., Montreal. Meetings at Montreal 2nd Tuesday, each month, except June, July and August, at 8.30 p.m.

Canadian Ticket Agents' Association—E. de la Hooke, London, Ont.

Dominion Marine Association—F. King, K.C., Counsel, Kingston, Ont.

Engineers' Club of Montreal—C. M. Strange, 9 Beaver Hall Square, Montreal.

Engineers' Club of Toronto—R. B. Wolsey, 84 King Street West, Toronto.

Engineering Institute of Canada—F. S. Keith, 176 Mansfield Street, Montreal.

Express Traffic Association of Canada—C. N. Ham, Chairman, 137 McGill Street, Montreal.

Great Lakes and St. Lawrence River Rate Com-

mittee—A. E. Storey, 310 Canadian National Rys. General Office, Montreal.

Hydro Electric Railway Association of Ontario—T. J. Hannigan, Guelph, Ont.

Niagara Frontier Summer Rate Committee—James Morrison, Canadian National Rys., Montreal.

Quebec Transportation Club—A. F. Dion, 131 Dalhousie Street, Quebec, Que.

Railway Association of Canada—C. P. Riddell, General Secretary, 263 St. James Street, Montreal.

Western Operating Committee, E. J. Stone, 306 Union Station, Winnipeg.

Shipping Federation of British Columbia—Capt. J. R. Stewart, 837 Hastings St. West, Vancouver.

Shipping Federation of Canada—Thomas Robb, Manager, 42 St. Sacramento Street, Montreal.

Transportation Club of Toronto—W. J. Hotrum, 595 Runnymede Road, Toronto.

Transportation Club of Vancouver—C. A. Dorfner, 450 Hastings Street West, Vancouver, B.C.

Winnipeg Traffic Club—A. J. Barber, 114 Cado-min Bldg., Winnipeg, Man.

Transportation Meetings, Etc., in 1923 and 1924.

The names of persons given below are those of the Secretaries, unless stated otherwise:—

Dec. 4.—National Association of Railway and Utilities Commissioners, Miami, Florida. J. B. Walker, 49 Lafayette St., New York, N.Y.

Dec. 6 and 7.—American Railway Development Association, Chicago (semi-annual meeting). W. H. Hill, Agricultural Agent, New York Central Rd., Chicago.

Dec. 10 to 12.—American Association of Port Authorities, New Orleans, La. T. S. McChesney,

New Orleans.

Jan. 15 to 17, 1924.—American Wood Preservers Association, Kansas City, Mo. P. R. Hicks, 1146 Otis Building, Chicago, Ill.

Jan. 17, 18.—National Association of Railway Tie Producers, Kansas City, Mo. J. T. Penny, T. J. Moss Tie Co., St. Louis, Mo.

March 11 to 13.—American Railway Association, Division IV, Engineering, Chicago, Ill. E. H. Fritch, 431 South Dearborn St., Chicago.

March 13, 14.—American Railway Association, Division IV, Signal Section, Chicago, Ill. H. S. Balliet, 30 Desey St., New York, N.Y.

April.—American Railway Association, Division VII, Freight Claims, New Orleans, La. L. Pilcher, 431 South Dearborn St., Chicago.

May.—Association of Railway Claims Agents, West Baden, Ind. H. D. Morris, Northern Pacific Ry., St. Paul, Minn.

May 14 to 16.—American Railway Development Association, Savannah, Ga. (annual meeting). W. H. Hill, Agricultural Agent, New York Central Rd., Chicago, Ill.

May 20 to 23.—Master Boiler Makers' Association, Chicago, Ill. H. D. Vought, 26 Cortland St., New York, N.Y.

May 26-29.—International Railway Fuel Association, Chicago. J. B. Hutchison, 6000 Michigan Ave., Chicago, Ill.

June 3.—American Association of General Baggage Agents, Montreal. E. L. Duncan, 332 South Michigan Ave., Chicago, Ill.

June 11-18.—American Railway Association, Mechanical Division, Atlantic City, N.J. V. R. Hawthorne, 431 South Dearborn St., Chicago, Ill.

June 18 to 20.—American Association of Railroad Superintendents, Buffalo, N.Y. J. Rothschild, 400 Union Station, St. Louis, Mo.

Sept. 16-18.—Roadmasters' and Maintenance of Way Association, New York, N.Y. P. J. McDrews, C. & N.W. Ry., Sterling, Ill.

DAKE MARINE MACHINERY

Simple—Compact—Dependable

All Dake products are designed with a view to SIMPLICITY, working parts are made readily accessible wherever possible and so far as is practical, utmost EASE OF CONTROL is provided. Working parts are built heavy enough to stand the wear by using the best material suited to the requirements. The above applies to Steam Steering Gears, Capstans, Anchor Windlasses, Deck Winches, Shub Line Winches, Etc.

Our Complete Catalogue sent on request. Let us know your needs.

Bureau of Canadian Information

THE Canadian Pacific Railway, through its Bureau of Canadian Information, will furnish you with the latest reliable information on every phase of industrial and agricultural development in Canada. In the Reference Libraries maintained at Montreal, Chicago and New York are complete data on natural resources, climate, labor, transportation, business openings, etc., in Canada. Additional data is constantly being added. No charge or obligation attaches to this service. Business organizations are invited to make use of it.

This Splendid Plant and Equipment FOR SALE

AIR COMPRESSORS

- Item 4025 8 "Can-Ingersoll Rand" Compressors—1053 cubic feet capacity—cross compound—belt driven.
Item 4026 5 "Sullivan" Compressors—1100 cubic feet capacity—angle compound—belt driven.

BOILERS

- Item 3000 2 Locomotive Type Boilers—60 H.P. on skids.

CHANNELLERS

- Item 4024 14 "Sullivan" Type VW-61 Channellers—Duplex.

CONCRETE MIXERS

- Item 3004 15 "Ransome" Mixers—1 cubic yard capacity, electric driven—on skids.
Item 3005 3 "London" Mixers—1 cubic yard capacity, electric driven—on skids.

CONVEYORS

- Item 9006 1 "Stephens-Adamson" Conveyor 702' centres—30 inch.
Item 9007 2 "Robins" Conveyors—600' centres—24 inch.

DRILLS

- Item 4016 20 "Can-Ingersoll Rand" Submarine Drills—Type H66.
Item 4017 40 "Sullivan" Tripod Drills—Type FP-3.
Item 4021 5 "Canadian Ingersoll Rand" Tripod Drills—Type LG54.
Item 4022 8 "Canadian Ingersoll Rand" Tripod Drills—Type LG53½.
Item 4018 50 "Sullivan" Hammer Drills—Type DP33.

- Item 4019 10 "Canadian Ingersoll Rand" Jackhammers BCR-430.
Item 4020 15 "Canadian Ingersoll Rand" Jackhammers DDR-13.
Item 4023 12 "Oldham" Plug Drills—Type L.

HOISTS

- Item 9196 2 "Mead Morrison" Electric Hoists—Double Drum with 80 H.P. Motors.
Item 3007 6 "Marsh Engineering Works" Electric Hoists—Double Drum—with 75 H.P. Motors.
Item 9197 1 "Main" Electric Hoist—Double Drums—with 37 H.P. Motor.

LOCOMOTIVES

- Item 4005 1 "American" Saddle Tank—18 x 24 cyls.—57 Tons.
Item 4003 2 "Montreal Loco. Works" Saddle Tank—10" x 14" cylinders—18 Tons—standard gauge.
Item 4002 2 "Pennsylvania" Switchers—17" x 24" cyls.—40 Tons—with 8 wheel Tenders.
Item 3009 5 Electric Locomotives 500/600 volt D.C.—50 Tons.

SHOVELS

- Item 4001 1 Model 60 "Marion"—2½ yd.—70 Tons.
Item 4000 1 Class C-45 Atlantic—2½ yd.—65 Tons.
Item 3011 2 Model 103C "Bucyrus" Electric—4½ yd.
Item 3012 3 Model 225B "Bucyrus" Electric 6-8 yd.

SNOW PLOW

- Item 3013 1 "Can. Car & Fdry. Co." Standard R.R. Snow Plow.

TRACTORS

- Item 3015 4 "Fordson" Gasoline Tractors complete.

We list above only a few of the interesting items we have available. and will be glad to send our "Sales Inventory" upon request.

MAXI-TAPS!

MAXITAPS cut faster, take less driving power effort and last longer—

The **PILOT POINT** finds the hole and guides the tap, the **SHARP EDGE** of the lands shears the chips clear as the **REAMER SECTION** with its **CHIP BREAKER**, trues up for the threading section. Result: you get a clean cut thread in true alignment, with less work and power expended.

Distorting strains are eliminated and long life to the tap is assured.

Maxitaps are the result of our constant effort to produce better tools; tools absolutely fitted to the job they have to do.

One man behind a Maxitap can do more work and better work than two men could coax out of the old fashioned staybolt tap.

TRY THEM!

When You Strike a Snag in a Welding Job—

Write, telephone or wire to us. Our Service man will help you out of the difficulty. We go further than simply helping you in emergencies, our service men are also available for the bettering of shop practice pertaining to welding and cutting operations.

There may be ways in which you can profitably employ a welding and cutting outfit in your plant that have not occurred to you. Ways of reducing costs, and short cuts which will increase production. Our Welding Engineers will make a survey of your plant and operations at no cost to you. They will advise you how to make better use of your present welding equipment or how you can more profitably employ your cutting torch.

This service is gratis to our customers. It is the plus part of Dominion service which has influenced an ever-increasing list of manufacturing plants, contractors, ship yards, steel plants, and transportation companies to use Dominion Service for their oxygen and dissolved acetylene requirements. You, too, can use Dominion Service to advantage. Your request for information will be given prompt attention.

STERLING HACK SAWS

The most expensive tool used in a machine shop is a poor Hack Saw Blade. Some buyers purchase them where they are cheapest, but unconsciously they are paying the highest price. The Hack Saw illustrated on this page represents the "STERLING" Blade, which is the last word in a Hack Saw Blade, the makers being back of their entire product. The material and workmanship that go into the manufacture of this blade are of the very highest quality.

RESULT—A blade that has no superior.

Come to the Big Game Country Canada

The Big Game Hunter's Paradise

PACK up your rifle and kit and come to the place where real sportsmen test their skill. Here there's game fit for the steel of men who feel the "kick" of hunting the Grizzly, outwitting the crafty Mountain Sheep and Goat and bringing in the prize Moose or Deer. Nova Scotia, New Brunswick, Quebec, Ontario, Manitoba, Alberta, British Columbia are each the haunt of big game, easily reached by Canadian National Railways.

"Where to Hunt, Fish and Paddle in the New North" will give you helpful details in planning your trip this year. For this and information as to fares, open seasons, etc., enquire of nearest Agent, or write C. K. Howard, General Tourist Agent, Montreal, P.Q.

Canada Welcomes United States Tourists.

No Passports Required.

The Letter that Lighted Two Million Lamps

FORTY-TWO years ago, by the flickering light of a kerosene lamp in the little town of Shenandoah, Pennsylvania, a young mine worker sat down at the close of the day, and wrote this letter to the editor of the "Mining Herald"—

"Will you or some of your readers be kind enough to inform me what form of airways offers the least resistance—circular or square?"

This letter may not mean very much to-day, but it meant a great deal in 1881, when accidents due to imperfect mine ventilation were taking a frightful toll of lives.

Picture the scene and the circumstances. . . . Here was a young mine worker who wanted information on a subject connected with his daily work. He wanted it quickly, even desperately, for it might conceivably be the means of saving his life and the lives of his fellow workers.

He had sought the information in many places—he had asked many men. Nobody seemed able to answer his question. So he sat down and wrote to the "Mining Herald."

It was a simple letter, yet few letters ever written have had greater influence on the lives of as many men and women.

For out of the answering of that letter and the many others that followed grew the "Question and

Answer Department" of the "Mining Herald"—a great clearing house of practical information.

And then came the great conception. Men who had left school to earn their own living wanted to know more about the work beneath their hands. Why not give them this knowledge with a measure of thoroughness that would not only answer present urgent inquiries, but would prepare them to advance in position and in earnings? And why not provide it by a method that would make each home a school and the spare hours of evening the time for study?

Out of this impulse to serve came the International Correspondence Schools, and a new idea in education was born.

The first student of the Schools was enrolled on October 16, 1891. By December, 1910, the enrolment was 1,363,700; and by June 30 of the present year it had grown to 2,561,312, the largest enrolment of any single school in the history of education.

That young miner of forty-two years ago has become a legion of students seeking and finding the answers that have meant efficiency in countless vocations. The flickering lamp at his elbow has become a light of knowledge, burning in two million homes. And the seekers swell in number and the lights burn brighter as this "University of the Night" continues to grow in usefulness through the years.

**International Correspondence Schools,

Conducting the I.C.S. System of Engineering, Trade and Academic Training in Canada and Newfoundland

The Nos. 125 & 135 Simplex Geared Car Jacks

—which superseded the Nos. 25 & 35—2 years ago have created both respect and enthusiasm.

The cost of Jack repairs and delays has been greatly reduced by the use of the modern Simplex Jacks.

The man-power too, produces extraordinary economies.

We are helping you build a greater Canada and permanent prosperity.

Our "Introduction" is Like a Letter From a Friend

You men who sell things know how hard it is for you to get to the responsible department heads of large corporations.

Not because they are not interested in what you have to say and to sell; but because there are too many of you and too few minutes in a working day.

The result is, that they see the few whom they feel they know and can depend on, and turn away the many who have not yet "qualified."

A favorite artifice of some salesmen is to make the acquaintance of a friend of the man they wish to see, and to carry from that friend a letter of introduction that will penetrate beyond the purview of "his majesty the doorkeeper."

But, a better plan than that, because more direct and more all-inclu-

sive, is to carry out an intelligent, information-giving advertising campaign in

CANADIAN RAILWAY AND MARINE WORLD

We say this advisedly, at the suggestion of more than one busy official; for bear in mind that the man who bears on his shoulders the responsibility of recommending, specifying or buying, equipment or materials feels the need of honest information—is hungry for facts and weary of time-eating interviews with salesmen.

The sort of advertising they want you to print in their paper will open the doors to your salesmen; shorten the route to distinguished preferment and fill their order books—if their goods are worthy and their prices right.
